ANALYSIS
CATALYST / TODAY'S DRIVER
MXL is riding a powerful price recovery driven by 43% revenue growth acceleration and renewed demand for its high-speed connectivity and data-center interconnect silicon - a sharp reversal from the 2023-2024 inventory correction that cratered the stock. The primary forward catalyst is the July 22 earnings print (63 days out), where the market will assess whether the revenue recovery is sustainable, whether data-center and broadband design wins are ramping into volume production, and whether management raises full-year guidance - a guidance raise on a second consecutive strong print would be the re-rating event.
BUSINESS & POSITION
MaxLinear designs and markets high-performance analog and mixed-signal semiconductors for broadband communications, data-center interconnect, and wireline infrastructure - its chips move data at high speed across cable modems, optical PAM4 links, and enterprise networking gear. The company competes in a niche segment where its integration of analog front-end and DSP logic into a single-die solution provides a cost and power-efficiency edge that is difficult for pure-play digital fabs to replicate.
FACTOR & THEME
MXL sits at the intersection of two accelerating secular themes: AI infrastructure buildout (high-speed optical and electrical interconnect inside hyperscaler data centers is a direct derivative of GPU cluster density growth) and broadband infrastructure upgrade cycles (DOCSIS 3.1/4.0 and PON deployments globally). Both themes have durable multi-year capex tailwinds, though data-center interconnect is the higher-velocity near-term driver given hyperscaler spending commitments through 2027.
BREAKOUT SIGNAL
Close above \$104.27 (52W high / pivot) on volume >150% of 20-day average to confirm a genuine breakout; current price at \$96.77 is 7.2% below pivot - NOT a confirmed breakout today
INSTITUTIONAL
Institutional ownership is reported at 87.5% across 333 institutions - a high level consistent with a widely-held SMID semiconductor name, meaning incremental-buyer fuel from new institutional discovery is limited and price appreciation must come from existing holders increasing weight or new growth-fund mandates rotating in on the recovery thesis. Volume today is only 0.47x average - well below the 1.5x pre-filter threshold, which is a meaningful concern: there is NO institutional block-buying signature on this session. Insider activity is a clear negative data point: zero open-market buys in the last 90 days AND zero buys in the trailing 12 months, versus 17 insider sales totaling approximately \$10.7M over 12 months. This is a one-sided insider tape - insiders are distributing into strength, not accumulating alongside the recovery. No silent-build pattern, no accumulation cluster. The smart-money picture is mixed at best.
EARNINGS
EARNINGS IN 63D
EARNINGS CONTEXT
Next earnings: July 22 (63 days). MXL reported a 43% year-over-year revenue increase in its most recent quarter, confirming the inventory correction has fully cleared. The stock was a serial earnings destroyer through 2023-2024 (consistent revenue misses as the broadband/cable end-market froze), making this recovery in growth the key re-rating narrative. Consensus will be looking for management to confirm whether design-win ramps in data-center PAM4 and next-gen cable silicon are producing durable sequential growth - any pull-forward or one-time element in the 43% would reset expectations sharply lower. Beat-and-raise on July 22 is the highest-impact single event on the forward calendar.

MXL - Analysis (continued)

KEY RISK

Thesis is invalid on a daily close back below the \$88-90 support zone (the base of the recent consolidation and the 50MA cluster); separately, any commentary ahead of or at the July 22 print indicating that the 43% revenue growth included pull-forward demand or that design-win conversions are slipping into 2027 would structurally break the recovery narrative and likely re-test the \$70s. The analyst consensus target of \$49.45 - far below the current price of \$96.77 - is a significant red flag suggesting sell-side models have not been updated to reflect the recovery, OR that a meaningful portion of the street views the current price as fully pricing the recovery cycle peak.

ANALYSIS

The single strongest disconfirming evidence is the volume: at 0.47x average, today's move is not a breakout - it is a low-conviction drift toward resistance, and the stock has not cleared its \$104.27 pivot. The 43% revenue growth is real and the recovery thesis is compelling, but the setup has critical flaws: base_tight of 6.68 is nearly 5x the VCP-tight threshold, the RS line is NOT at a new high despite a 416% rs_vs_spy reading (meaning the stock is recovering lost ground rather than leading), insiders have sold \$10.7M with zero buys over 12 months, the analyst consensus target of \$49.45 is a staggering 49% below current price suggesting deep valuation disagreement, and the market regime favors mega-cap tech over SMID names (IWM/SPY trend -2.9%). This is a recovery story in early innings with a real July 22 catalyst path, but it has NOT set up technically - it is a watchlist name until it either (a) tightens into a proper VCP base below \$104 with drying volume over 2-3 weeks, then breaks out on 2x+ volume, or (b) reports a blowout July 22 quarter with raised guidance. Do not chase the current move. Conviction: Low.

Signal: Close above \$104.27 (52W high / pivot) on volume >150%

Recent 13D / 13G Filings (last 12 months)

13D = activist stake, board pressure, takeover | 13G = passive 5%+ holder, lower-conviction

No 13D or 13G filings against this company in the last 12 months.

Ownership Interpretation

Smart Money:	1 known active fund(s) detected - partial conviction signal. Monitor for more entries.
Concentration:	Top 10 hold 82% - heavy concentration. Outsized impact from any single fund's exit.
13D/13G:	No 5%+ stake filings in last 12 months. Either nobody's gone over the threshold or the company is too large for 5% to be common (>\$10B caps rarely see 13D/G activity).
Insider Tape:	17 insider sales in 12 months, no open-market purchases - neutral to bearish (but typical for unprofitable growth companies).

INSTITUTIONAL FOOTPRINT - PRICE / VOLUME INTELLIGENCE

What institutions are doing right now (the price/volume tape never lies)

Volume / Tape Synthesis

- A/D Verdict:

A-rated tape (Strong Accumulation). Volume action favors buyers - institutions are net accumulating over the last 13 weeks.
- Trajectory:

Recent month is strong accumulation - building on prior momentum. Trend is on your side.
- Vol Footprint:

Last 90d: 5 accumulation, 2 absorption, 1 distribution day(s) at >2x average volume. Net bullish - accumulation outpacing distribution.

TAPE-BASED ACTION: ACCUMULATE / SIZE UP ON BREAKOUT
