ANALYSIS

CATALYST / TODAY'S DRIVER

Current move appears technical in nature, recovering from prior consolidation. Forward catalyst: Q3 earnings October 29 offers potential for SaaS revenue beat and FY27 guidance that could re-rate the multiple as retail/supply-chain software demand stabilizes post-pandemic normalization.

BUSINESS & POSITION

SPS Commerce provides cloud-based supply chain management solutions, connecting retailers, suppliers, grocers and distributors through its EDI and fulfillment platform. The company serves a sticky, recurring-revenue customer base in retail supply chain automation.

FACTOR & THEME

Benefits from e-commerce infrastructure buildout and retail supply-chain digitization, though these are mature secular themes rather than accelerating tailwinds. Technology sector leadership (+0.4% vs SPY this week) provides modest sector wind but not a primary driver.

BREAKOUT SIGNAL

Close above \$82.03 on volume >4.0x of 20-day average

INSTITUTIONAL

Volume surge to 4.04x average suggests institutional participation, though the 35.6M float allows for technical moves on moderate absolute dollar volume. No insider buying in last 90 days is notable absence of conviction signal. Institutional ownership data unavailable from this feed; recommend cross-referencing 13F filings.

EARNINGS

EARNINGS IN 48D

EARNINGS CONTEXT

Next print October 29 (48 days out). Consensus estimates and beat history not provided in dataset; SaaS companies typically guide conservatively and beat on operating leverage. The 48-day runway offers time for position-building ahead of the catalyst.

KEY RISK

Setup invalidates on a close back below \$78.00 (approximate 20-day MA level), or if October 29 earnings disappoint on ARR growth or customer retention metrics, which would confirm the supply-chain software cycle has peaked.

ANALYSIS

Strongest disconfirming evidence: prox_52w at only 71.4 means the stock is still 28% below its high-this is NOT a breakout, it's a recovery bounce within a long consolidation. RS line not at new high, base is wide (2.57), and critically, the move lacks RS line confirmation (rsLineNewHigh=false) which is Qullamaggie's #1 early leader signal. The 45.1 RS vs SPY is impressive outperformance, but without proximity to highs or a tight base, this is an early-stage setup that hasn't earned breakout treatment. The mixed macro regime (VIX elevated, IWM underperforming SPY by 3.8%) further reduces follow-through odds. October 29 earnings offers a defined catalyst 48 days out, but being early without technical confirmation equals being wrong. This belongs on a watchlist for a proper setup closer to \$95+ with base tightening. Conviction: Low

Signal: Close above \$82.03 on volume >4.0x of 20-day average
