ANALYSIS
CATALYST / TODAY'S DRIVER
UAMY is a US-listed primary antimony producer at a moment when antimony has been designated a critical mineral and China has imposed export controls on antimony - creating a structural supply vacuum that favors domestic producers. The forward catalyst path centers on potential DoD or DPA Title III offtake agreements (likely H2 2026), continued Chinese export-control escalation, and the August 14 earnings print, which will be the first full-quarter test of whether UAMY is converting policy tailwind into revenue inflection. Any US government contract award would be a high-impact binary catalyst.
BUSINESS & POSITION
United States Antimony Corporation is one of the only vertically integrated primary antimony producers in North America, operating smelting and processing facilities in Montana and Mexico. The company produces antimony trisulfide, antimony oxide, and antimony metal used in flame retardants, ammunition, military equipment, and semiconductors - end-markets with direct national-security relevance that distinguish it from generic mining peers.
FACTOR & THEME
UAMY sits at the intersection of the US critical-minerals reshoring theme and the defense/national-security spending cycle - two of the strongest secular tailwinds in the current policy environment. China's 2024-2025 antimony export restrictions are a structural, not cyclical, supply shock; the DoD's designation of antimony as a critical defense mineral and the broader push to fund domestic supply chains under the Defense Production Act give UAMY a policy moat that most small-cap miners lack. Theme momentum is accelerating, not decelerating.
BREAKOUT SIGNAL
No actionable breakout signal present. Stock is -5.89% today, below its 20MA and 50MA, at 41.1% of its 52-week high, with volume at only 0.42x average. Watch for: reclaim and close above the 20MA (approximately \$9.50-\$10.00 area) on volume >1.5x the 20-day average as the minimum re-entry trigger. The \$12.64 pivot is the true breakout level.
INSTITUTIONAL
Institutional ownership stands at 57% across 308 holders, indicating meaningful but not saturated institutional presence - there is room for incremental buyers as the thesis matures. No insider open-market buys have been recorded in the last 60 days (last 90 days window is clean); however, Chairman & CEO Gary C. Evans purchased 100,000 shares at \$6.13 (\$613K) on September 26, 2025 - a material senior-officer buy at prices well below the current level, signaling management conviction in the long-term value. No insider sales in the last 12 months. Short interest is elevated at 20.6% of float with a 2.5-day days-to-cover, which is meaningful squeeze potential if a government contract announcement or strong earnings catalyst emerges.
EARNINGS
EARNINGS IN 88D
EARNINGS CONTEXT
Next earnings: August 14, 2026 (88 days out). Revenue growth is currently negative (-3.1% trailing), and the company carries no trailing P/E (unprofitable on a trailing basis); valuation reflects a pre-commercial-scale growth premium with a P/S of 30.8x - elevated and only justifiable if a revenue inflection materializes. The forward P/E of 23.8x implies analyst models are pricing in a significant profitability step-up. Beat/miss history is not available from this feed; however, the key earnings narrative will be whether antimony pricing and volume are converting Chinese export restrictions into a revenue and margin uplift - that is the specific data point to track at the August print.
KEY RISK
Thesis is invalidated if: (1) price closes and holds below the \$6.13 CEO buy price on elevated volume - signaling the smart-money entry level has failed; (2) the US government delays or cancels anticipated DPA/DoD offtake discussions; or (3) China reverses or softens its antimony export controls, collapsing the supply-scarcity premium. On valuation, at 30.8x P/S with negative revenue growth, any disappointment at the August 14 print that shows no inflection would rationally compress the multiple sharply.

ANALYSIS
This is emphatically NOT a breakout setup by any technical criterion - the stock is down 5.89% today, volume is less than half its average, it is below both the 20MA and 50MA, and sits 59% below its 52-week high at \$8.10 vs. the \$19.71 peak. The pre-filter description (above 20MA, vol >1.5x, green on day) is entirely inconsistent with this name's current data, suggesting it may have been included in error or the data represents a prior session's characteristics. The strongest disconfirming evidence against any bullish thesis is the price action itself: UAMY has declined roughly 59% from its 52-week high in a period when the

Recent 13D / 13G Filings (last 12 months)

13D = activist stake, board pressure, takeover | 13G = passive 5%+ holder, lower-conviction

No 13D or 13G filings against this company in the last 12 months.

Ownership Interpretation

Smart Money:	Top holders skew 4 passive / 6 active. No high-conviction smart-money names identified.
Concentration:	Top 10 hold 34% - moderate concentration, normal for SMID.
13D/13G:	No 5%+ stake filings in last 12 months. Either nobody's gone over the threshold or the company is too large for 5% to be common (>\$10B caps rarely see 13D/G activity).
Insider Tape:	1 buy / 0 sales over 12 months - mixed picture, watch for cluster patterns.

INSTITUTIONAL FOOTPRINT - PRICE / VOLUME INTELLIGENCE

What institutions are doing right now (the price/volume tape never lies)

Monthly Accumulation/Distribution Flow

Trend over last 3 months: are institutions accumulating, distributing, or rotating?

Period	Up-Vol %	A/D Trend	Price Chg	Vol vs Avg	Signal
3 Months Ago	63.9%	Accumulation	+48.6%	0.95x	Bullish
2 Months Ago	43.8%	Distribution	+1.2%	0.94x	Bearish
Last Month	32.9%	Heavy Distribution	-23.3%	1.11x	BEARISH

Significant Volume Days (Last 90 Days, >2x Average Volume)

Each row = a day institutions left a clear footprint. Absorption = stealth accumulation (silent buy).

Date	Close	Day Chg %	Volume	Rel Vol	Classification	Signal
2026-03-20	\$8.16	-10.4%	29,706,500	2.1x	DISTRIBUTION	Bearish

Volume / Tape Synthesis

- A/D Verdict:

D-rated tape (Distribution). Volume action favors sellers - institutions distributing. Avoid long entries until tape flips.
- Trajectory:

Recent month is heavy distribution - sellers in control. Wait for monthly flow to flip green.
- Vol Footprint:

Last 90d: 1 distribution day(s) at >2x average volume. Net bearish - distribution outpacing accumulation.

TAPE-BASED ACTION: AVOID / TAPE NOT CONSTRUCTIVE
