ENTRY TRIGGER

Close above \$215.80 on volume >130% of 20-day avg (>325K shares)

Target: \$248 (15% measured move from pivot based on 4.34% base depth × 3.5x; aligns with cup-base projection)

Stop: \$200.00 (-7.2% from pivot; below 50-day MA and prior base support)

CATALYST INTELLIGENCE
EARNINGS
April 29 - Q1 reported April 29; consensus had been ~\$1.45 EPS. Forward EPS of \$7.44 vs TTM \$3.65 implies the Street is modeling sharp operating leverage as semi/defense mix re-accelerates. Catalyst type: Industry / Impact: Medium - next earnings ~3 months out.
BUSINESS & POSITION
Materion is a specialty materials company supplying beryllium alloys, precision optics, and advanced chemicals critical to defense, semiconductors, aerospace, and medical imaging end-markets. It holds a near-monopoly position in U.S. beryllium production - a Defense Logistics Agency-designated strategic material - and is a sole-source supplier on multiple defense and EUV lithography programs.
FACTOR & THEME
Direct exposure to the defense reshoring + semi capex super-cycle, with rev growth re-accelerating to +30.8%. Sentiment in defense-materials peers (HAYN, ATI, CRS) has been accelerating as DoD multi-year procurement contracts hit.
NEWS FLOW
Sector tailwind from DoD critical-materials sourcing mandates and EUV/advanced-node ramp at TSMC/Intel. No new contract announcements in last 30 days, but the post-earnings drift has been constructive with quiet accumulation visible in dry-up. Catalyst type: Industry / Impact: Medium.
INSTITUTIONAL
Tight float (20.5M) with three weeks of volume contraction (311K289K286K) and price holding within 3% of 52W high signals quiet institutional accumulation post-earnings. No insider buying in last 60d - neutral, not disqualifying given the post-print setup.
KEY RISK
Thesis invalid on a close below \$200 (50-day MA and base low confluence), or on any commentary signaling beryllium demand softening from semi customers.

Post-earnings VCP with RS line at new highs and tight float make this a high-quality coil, but base_tight of 4.34 is wider than A-grade and no imminent catalyst keeps it in B territory. Strongest bear case: low avg volume (250K) means liquidity-driven false breakouts are common in this name. Conviction: Medium.

MTRN — 90D Base Setup | Pivot: \$215.62 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

Target: \$93 (17% measured move; base depth x 2 + pivot, consistent with prior breakout extensions)
Stop: \$72.00 (-9.7% from pivot; 50-day MA confluence)

CATALYST INTELLIGENCE
EARNINGS
July 29 - Next print July 29 (~10 weeks out). Forward EPS \$2.05 vs TTM \$1.38 = +48% growth modeled. Has been a serial beater across last 4 quarters with rev growth accelerating, not decelerating. Catalyst type: Earnings / Impact: High but distant.
BUSINESS & POSITION
Vita Coco is the dominant U.S. coconut water brand with ~50% category share, expanding into Vita Coco Treats and Spiked Coconut. The company is asset-light (co-packer model), generates strong cash flow, and is riding the better-for-you beverage premiumization wave alongside Celsius, Olipop, and Poppi.
FACTOR & THEME
Pure-play on functional beverage growth (+37% revenue, +61% earnings) - a theme where peer multiples (CELH, MNST) compressed but COCO has been the standout share-gainer. Sentiment accelerating as coconut water displaces sugary sports drinks.
NEWS FLOW
No major corporate news last 30d, but category data from Nielsen/Circana continues to show coconut water gaining shelf space at retail. 12.8% short interest with 3.9 days-to-cover sets up squeeze potential on any breakout. Catalyst type: Industry / Impact: Medium.
INSTITUTIONAL
Dramatic volume contraction (2021K1600K1036K, -49%) with price holding within 1% of 52W high = textbook quiet accumulation by long-only growth funds. 12.8% short interest provides squeeze fuel. No insider buying in last 60d.

KEY RISK
Thesis invalid on a close below \$72 (base low and 50-day MA), or on any Q2 print showing volume growth deceleration that would crack the premium consumer-staples-growth multiple.
Best-in-class fundamentals (+37% rev, +61% earnings) plus textbook vol dry-up and high short interest = explosive setup, but base_tight of 8.76 is well above A-grade threshold and earnings catalyst is 10 weeks away. Strongest bear case: target price of \$73.67 is BELOW current price, suggesting sell-side is behind and could refresh either way. Conviction: Medium-High.

COCO — 90D Base Setup | Pivot: \$79.70 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

Target: \$38 (17% measured move; aligned with prior cup-base projection and analyst PT of \$33.30 plus upside revision)

Stop: \$28.50 (-12.4% from pivot; 50-day MA and base support)

CATALYST INTELLIGENCE	
EARNINGS	
August 5 - Q2 print August 5. Forward EPS \$3.14 vs TTM \$1.73 = +81% earnings growth modeled on Agamree ramp. Catalyst is distant (76 days). Catalyst type: Earnings / Impact: High but deferred.	
BUSINESS & POSITION	
Catalyst Pharmaceuticals commercializes Firdapse (LEMS), Fycompa (epilepsy), and Agamree (DMD) - a rare-disease specialty pharma with 84% gross margins and 49% operating margins. The recent Agamree launch (acquired from Santhera) is the key growth lever driving forward EPS to \$3.14 from \$1.73 TTM.	
FACTOR & THEME	
Rare disease / orphan drug theme with pricing power insulation from broader biotech volatility. Trades at 10x forward earnings - well below specialty pharma comps - as the market still under-credits Agamree ramp.	
NEWS FLOW	
Quiet news flow last 30d - base is forming on no specific catalyst, which is both feature (organic accumulation) and bug (no imminent trigger). 7.9% short with 4.3 days-to-cover provides modest squeeze fuel.	
INSTITUTIONAL	
Clean volume contraction (3776K3702K2780K, -26%) with RS line at new high suggests biotech generalist funds rotating in ahead of Agamree script-data readouts. No insider buying in last 60d.	
KEY RISK	
Thesis invalid on a close below \$28.50 (50-day MA / base low), or on any Agamree script data showing the launch trajectory undershooting consensus.	

Cheap rare-disease pharma with cleanly contracting volume and RS at new high, but earnings catalyst is 11 weeks out and the 4.1% to pivot means timing risk is elevated. Strongest bear case: analyst target only \$33.30, suggesting limited Street upside until Agamree numbers prove out. Conviction: Medium.

CPRX — 90D Base Setup | Pivot: \$32.56 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

ENTRY TRIGGER
Close above \$48.10 on volume >150% of 20-day avg (>1M shares)

Target: \$54 (13% measured move; conservative given analyst PT of \$48.25 already at pivot, requires fundamental upgrade)
Stop: \$44.50 (-7.2% from pivot; 50-day MA confluence)

CATALYST INTELLIGENCE

EARNINGS

July 27 - Q2 print July 27. Forward EPS \$4.95 vs TTM \$2.48 = +99% growth (reflects normalization of prior-year actuarial charges). Catalyst type: Earnings / Impact: Medium.

BUSINESS & POSITION

CNO Financial provides life, health, and supplemental insurance products to middle-income Americans through Bankers Life and Washington National brands. It's a quiet rate-beneficiary - higher yields on the float drive ROE expansion (now 9.8%) - and management has been aggressive on buybacks.

FACTOR & THEME

Higher-for-longer rate regime benefits insurance float economics; +85.7% earnings growth shows operating leverage. Insurance peers (AFL, GL, PRI) have been bid up; CNO still trades at 9.6x forward.

NEWS FLOW

No major news flow last 30d - base is forming on quiet sector rotation into insurance. Buyback program continues to shrink share count. Catalyst type: Corporate / Impact: Low-Medium.

INSTITUTIONAL

Clean vol contraction (785K776K622K, -21%) with RS line at new high in a defensive insurance name = pension/value fund accumulation pattern. No insider buying in last 60d.

KEY RISK

Thesis invalid on a close below \$44.50 (50-day MA), or on any Q2 print revealing actuarial reserve charges that crack the EPS growth narrative.

Tight base, RS line at new high, and clean vol dry-up in a quiet insurance name suggest patient institutional accumulation - but rs_vs_spy of only +6.1 means this is a slow-mover and base_tight 4.85 is loose. Strongest bear case: analyst PT \$48.25 essentially AT the pivot - no Street upside cushion. Conviction: Medium.

CNO — 90D Base Setup | Pivot: \$47.95 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

ENTRY TRIGGER
Close above \$135.00 on volume >150% of 20-day avg (>1.2M shares)
Target: \$158 (17% measured move; aligned with 21% short squeeze potential)
Stop: \$122.00 (-9.5% from pivot; 50-day MA)

CATALYST INTELLIGENCE
EARNINGS
August 6 - FQ4 print August 6. Forward EPS \$5.27 (vs TTM -\$1.25) shows expected swing to profitability as IoT cycle inflects. Catalyst type: Earnings / Impact: High but 11 weeks out.
BUSINESS & POSITION
Synaptics designs human-interface and wireless connectivity SoCs for IoT, automotive, and PC end-markets - increasingly positioned as an edge-AI inference play through its Astra AI-native platform. The IoT cycle is bottoming and the AI-PC refresh is starting to inflect 2H26 revenue expectations.
FACTOR & THEME
Direct edge-AI semiconductor exposure - peer reads from QCOM, SWKS, and AMBA have been positive, with sentiment in IoT-recovery names accelerating sharply (rs_vs_spy +53.4 is top-decile).
NEWS FLOW
Continued positive read-through from Astra AI platform design wins and IoT/edge-AI sector momentum. 21.1% short interest with 6.2 days-to-cover is exceptional squeeze setup if pivot triggers. Catalyst type: Industry / Impact: High.
INSTITUTIONAL
Vol dry-up exists but not strictly stair-stepped (1076K1253K1014K). RS line at new 52W high with +53.4% RS vs SPY is the strongest in this cohort. 21.1% short interest = embedded squeeze fuel. No insider buying in last 60d.
KEY RISK
Thesis invalid on a close below \$122 (50-day MA), or on negative AI-PC/IoT demand commentary from QCOM/SWKS that signals cycle delay.

Best RS in the cohort (+53.4%) and 21% short interest create explosive asymmetry, but vol_dryup_strict is false (vol not perfectly stair-stepped) and base_tight 5.83 is wider than A-grade. Strongest bear case: analyst PT \$126.45 is BELOW current price - sell-side hasn't caught up and could come either way. Conviction: Medium-High.

SYNA — 90D Base Setup | Pivot: \$134.84 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

Close above \$106.10 on volume >150% of 20-day avg (>1.1M shares)
Target: \$125 (18% measured move; aligns with analyst PT \$117.33 + squeeze premium)
Stop: \$94.00 (-11.3% from pivot; 50-day MA and base low)

CATALYST INTELLIGENCE
EARNINGS
May 5 - Q1 reported May 5. Forward EPS -\$0.68 (improving from -\$1.81 TTM) reflects narrowing losses as J&J milestones hit. Rev growth +99%. Catalyst type: Corporate / Impact: High (Phase 3 readouts).
BUSINESS & POSITION
Protagonist develops peptide therapeutics including rusfertide (polycythemia vera, Phase 3) and icotrokinra (oral IL-23 for psoriasis, partnered with J&J). The J&J icotrokinra partnership provides milestone economics and royalty optionality on a potentially \$5B+ oral psoriasis market disrupting injectables.
FACTOR & THEME
Late-stage biotech with de-risked Phase 3 catalysts. Peer reads from oral IL-23 / IBD assets have been mixed but icotrokinra Phase 3 data has been constructive.
NEWS FLOW
Post-earnings drift constructive on continued icotrokinra readout cadence and rusfertide Phase 3 momentum. 13.6% short interest with 10.7 days-to-cover = very high squeeze potential. Catalyst type: Corporate / Impact: High.
INSTITUTIONAL
Exceptionally tight base (base_tight 1.68) with clean vol contraction (672K533K451K, -33%) signals biotech specialist fund accumulation. 13.6% short / 10.7 days-to-cover is the highest squeeze fuel in cohort. No insider buying in last 60d.
KEY RISK
Thesis invalid on a close below \$94 (50-day MA / base low), or on any negative rusfertide Phase 3 data or J&J commentary suggesting icotrokinra deprioritization.

Tightest base in cohort (1.68) with high short squeeze potential and de-risked J&J-partnered pipeline, but RS line NOT at new high is the meaningful structural blemish that prevents A-grade. Strongest bear case: biotech-specialty momentum can reverse violently on any binary readout disappointment. Conviction: Medium-High.

Target: \$80 (13% measured move; aligned with analyst PT \$76 plus extension)
Stop: \$64.50 (-9.0% from pivot; 50-day MA)

CATALYST INTELLIGENCE
EARNINGS
May 7

Tight base, RS line at new high, and vol dry-up exist but vol_dryup_strict is false (middle week spiked) and earnings already reported with no near-term catalyst. Conviction: Low-Medium.

CATALYST INTELLIGENCE
EARNINGS
August 4
Closest to pivot in cohort (0.6%) and tight base, but rs_vs_spy NEGATIVE (-2.7) and RS line not at new high disqualifies for B grade - structural without leadership. Conviction: Low.

CATALYST INTELLIGENCE

EARNINGS

April 22

Sitting at pivot with tight base but negative RS vs SPY and RS line not at new high - structurally clean but no leadership signature or near-term catalyst. Conviction: Low.
