Close above \$9.65 on volume >150% of 20-day avg (>2.7M shares)
Target: \$11.40 (measured move from \$7.90 base low + pivot, ~18% upside)
Stop: \$8.75 (below 21-day EMA and prior consolidation shelf, ~8% risk)

CATALYST INTELLIGENCE
EARNINGS
August 4 - Next print ~Aug 4, well outside the trigger window. Trailing EPS -\$0.20, fwd EPS -\$0.19; consensus is muted. Revenue growth +114% YoY off the digital pivot, though net margin still negative - the bull case requires margin inflection, not just top-line.
BUSINESS & POSITION
Entravision operates Spanish-language TV/radio stations (Univision/UniMás affiliates) across U.S. Hispanic markets and runs a digital advertising solutions arm serving emerging markets in Latin America, Asia and Africa. The story has shifted from the painful 2024 Meta authorized-sales-partner termination toward a leaner, U.S.-media-and-Adsmurai-centric model with triple-digit reported revenue growth as new digital segments scale.
FACTOR & THEME
Taps the small-cap reflation + advertising-cycle recovery trade as political ad spend ramps into the 2026 midterms; benefits from Hispanic-demo media tailwinds that Univision/TelevisaUnivision peers have flagged.
NEWS FLOW
Stock has nearly quadrupled off the \$1.85 52-week low as the post-Meta restructuring narrative gets re-rated and political advertising estimates for 2026 cycle build. No fresh contract or M&A catalysts in the last 30 days - the move is pure technical re-rating plus short-base squeeze (Catalyst: Industry / Med). Watch for any 13D filings; the float and cap make this a credible strategic target for TelevisaUnivision or a private-equity media roll-up.
INSTITUTIONAL
Volume contraction from 5.49M 5.44M 3.72M into a 52-week high with RS line at new high is textbook quiet accumulation. yfinance institutional/insider ownership fields are unavailable from this feed (not a red flag). Zero Form 4 open-market buys in last 60 days - the setup leans on price/volume confirmation only.

KEY RISK
Thesis invalid on a close back below the \$8.75 base low or any pre-announcement / advertising-cycle warning before the Aug 4 print; high leverage (D/E 323%) means any revenue stumble compounds quickly.
Vol dry-up is genuine (32% contraction), price is 1.2% from pivot, RS +217 with RS line at new high - structurally A-quality, but base_tight at 7.95 is wide (story stock that ran from \$1.85) and there is no catalyst inside two weeks, which keeps this a B. Strongest disconfirming argument: the 4x run already prices in significant digital-ad recovery, leaving the breakout vulnerable to profit-taking absent a fresh fundamental trigger. Conviction: Medium.

ENTRY TRIGGER

Close above \$5.90 on volume >150% of 20-day avg (>1.75M shares)

Target: \$6.85 (measured move from \$5.10 base low to pivot projected up, ~19% upside)

Stop: \$5.30 (below 50-day MA and base low, ~8% risk)

CATALYST INTELLIGENCE

EARNINGS

July 28 - Next print ~July 28 - outside the trigger window. Fwd EPS -\$0.82, still loss-making; P/S 1.2x and P/B 0.9x reflect the broken-down legacy multiple. Revenue +3.3% YoY suggests early cycle turn; the bull case rests on sequential gross-margin recovery from the 16% trough.

BUSINESS & POSITION

Magnachip designs analog and mixed-signal power-management and OLED display driver ICs out of Korea, selling primarily into consumer, industrial and automotive end markets. The company has restructured post-OLED-divestiture into a Power IC pure-play, with management guiding toward profitability inflection as the analog cycle bottoms.

FACTOR & THEME

Levered to the broader semi-cycle bottoming trade and Korean SMID semi re-rating alongside power-IC peers (MPWR, SLAB read-throughs); also captures any automotive/industrial inventory normalization beta.

NEWS FLOW

Tape is responding to broader analog-semi rotation and Korean tech strength; no specific company catalyst in the last 30-60 days beyond the standard cycle commentary (Catalyst: Industry / Med). The lack of identifiable forward catalyst inside two weeks is the structural weakness here - this is a cycle proxy, not a story stock.

INSTITUTIONAL

Volume profile (3.42M 1.80M 2.46M) shows partial dry-up but not clean stair-step; today's vol_ratio 1.45 suggests some pre-breakout interest. yfinance institutional ownership unavailable from this feed. Zero insider open-market buys in last 60 days - no Form 4 conviction signal to lean on.

KEY RISK

Thesis invalid on a close back below the \$5.30 base low or any negative semi-cycle pre-announcement from Korean peers (SK hynix, Samsung) ahead of the July 28 print.

Tight base (3.99), price 1.7% from pivot, RS +129 at new high - structurally clean, but vol dry-up is non-strict (w2 < w1 but w3 spiked) and today's volume ratio 1.45x suggests the coil is already loosening. No proprietary catalyst inside two weeks; this is a cycle-beta name and risk-on large-cap leadership regime is a crosswind for \$200M micro-cap semis. Strongest disconfirming argument: with no insider buying and a cycle-dependent thesis, the breakout could be a head-fake in a regime where mega-cap semis are absorbing all the flow. Conviction: Medium.

Close above \$69.55 on volume >150% of 20-day avg (>1.95M shares)

Target: \$76.50 (measured move + prior 52w high resistance)

Stop: \$62.50 (below 50-day MA and base low, ~6% risk)

CATALYST INTELLIGENCE

EARNINGS

July 27

Tight base (2.6) and clean 45% vol contraction, but RS vs SPY -1.4 with RS line NOT at new high disqualifies A/B - leadership characteristics are absent, and the 18% short interest plus negative TTM EPS make this a contrarian rebound, not a momentum setup. Conviction: Low.
