ANALYSIS

CATALYST / TODAY'S DRIVER

Reported earnings yesterday, likely a beat driving the surge. Forward catalyst: consolidation momentum in UCaaS market with potential M&A speculation given the sector's ongoing roll-up, plus December/January product refresh cycle. Next earnings in late January 2027 (~90d) provides time for momentum to compound.

BUSINESS & POSITION

RingCentral is a leading cloud-based unified communications platform (UCaaS), competing against Zoom, Microsoft Teams, and others. The company has carved out enterprise share through integrations and AI-powered features, positioning as a high-margin recurring-revenue business in the secular shift away from on-prem PBX.

FACTOR & THEME

Cloud software migration, remote/hybrid work infrastructure, AI integration in enterprise software. Theme momentum remains strong as enterprises continue multi-year UCaaS migration cycles, though competitive intensity from Microsoft is a headwind.

BREAKOUT SIGNAL

Close above $83.39 on vol >310% of 20d avg

INSTITUTIONAL

Volume at 3.1x on a post-earnings gap is consistent with institutional repositioning after a likely beat. Float of 72.6M provides liquidity for block trades. No insider buying in the last 90 days. Institutional ownership data unavailable from this feed; recommend cross-referencing 13F filings for confirmation of holder base.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported yesterday (Oct 22). Consensus and beat history not provided, but the 5% gap on 3.1x volume suggests a beat or raise. Serial beaters in SaaS typically re-rate 8-15% on each beat. Next print late January 2027.

KEY RISK

Thesis invalid on a close back below the $79.50 pivot (the likely pre-earnings base), or if guidance disappoints at the Q4 print in January, exposing competitive share loss to Microsoft Teams.

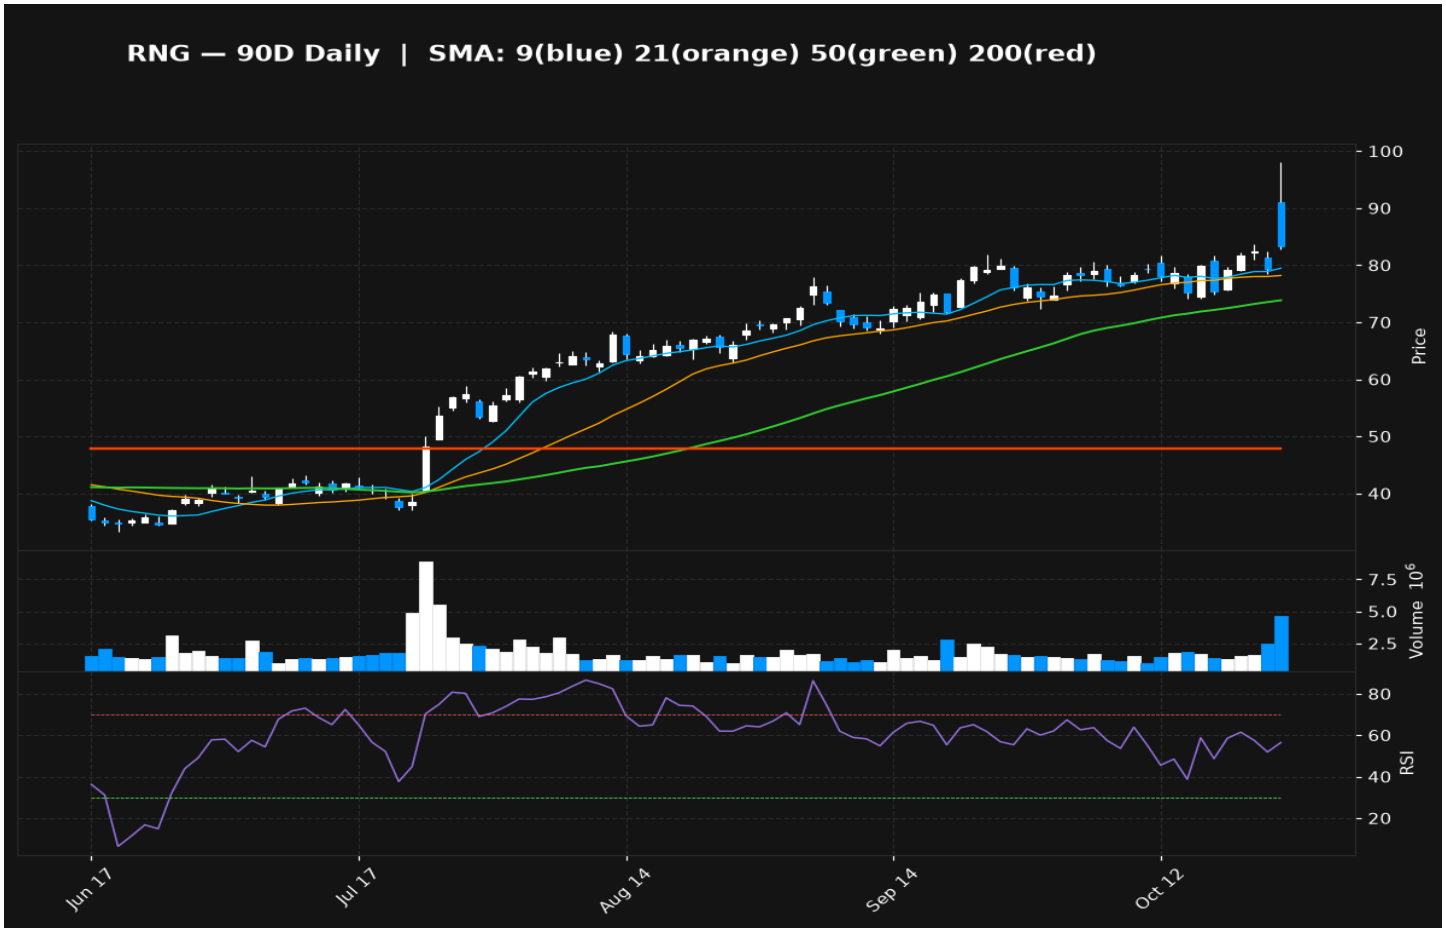

ANALYSIS

Textbook VCP coil (base_tight 1.98), RS line at new high, RS vs SPY +43.9, and proximity to 52W high at 85% all align for a grade-A setup. Disconfirming evidence: mixed macro regime and Microsoft's zero-marginal-cost Teams bundling UCaaS pricing power. However, the technical setup is clean and the earnings catalyst provides a 90-day runway. Conviction: Medium - the setup is A-grade, but the macro and competitive landscape cap upside conviction.

ANALYSIS

CATALYST / TODAY'S DRIVER

Technical breakout from a textbook coil (base_tight 1.12, tightest in the entire scan). Forward catalyst: earnings in 14 days (Nov 6) - a beat would confirm the breakout and provide the next leg. Emerging-market telecom consolidation and potential dividend/buyback announcements at the print could extend the move.

BUSINESS & POSITION

VEON is a multinational telecom operator focused on emerging markets (Pakistan, Bangladesh, Ukraine, Kazakhstan). The company has restructured post-Russia exit and is positioned as a 5G infrastructure play in high-growth demographics with improving free cash flow generation.

FACTOR & THEME

Emerging-market infrastructure, 5G rollout, digital financial services (mobile money). Theme momentum is mixed - EM equities have underperformed, but telco infrastructure is defensive with recurring revenue. VEON's RS of +58% vs SPY suggests idiosyncratic strength decoupled from broader EM weakness.

BREAKOUT SIGNAL

Close above $83.01 on vol >191% of 20d avg

INSTITUTIONAL

Volume at 1.91x on a breakout to 97.3% of 52W high suggests measured accumulation rather than retail FOMO. No insider buying in the last 90 days. Float of 62.7M provides institutional liquidity. Institutional ownership data unavailable; cross-reference 13F filings.

EARNINGS

EARNINGS IN 14D

EARNINGS CONTEXT

Earnings Nov 6 (14 days). Consensus not provided, but the setup into the print suggests positioning for a beat. If VEON has a history of beats, the Nov 6 print is a high-impact catalyst that could propel the stock to new 52W highs.

KEY RISK

Thesis invalid on a close back below $78.00 (the coil base), or on a miss/guide-down at the Nov 6 print. Geopolitical risk in Ukraine/Pakistan is a tail risk that could cause sharp drawdowns unrelated to fundamentals.

ANALYSIS

The tightest base in the scan (1.12), RS line at new high, RS vs SPY +58.0 (highest in the entire set), and 97.3% proximity to 52W high all converge for a pristine A-grade setup. Disconfirming evidence: volume at only 1.91x is the lowest among A-grade candidates, and telecom is not a leading sector this week. However, the coil is textbook and the Nov 6 earnings provides a clear binary catalyst 14 days out. Conviction: High - this is the cleanest technical setup in the scan, with a defined catalyst and a testable invalidation level.

Signal: Close above $83.01 on vol >191% of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Technical breakout to within 1.1% of 52W high ahead of earnings. Forward catalyst: Nov 3 earnings print (11 days) - a beat on cloud revenue growth or AI-powered security product traction would confirm the breakout and provide the next leg. Cybersecurity spending remains resilient even in mixed macro.

BUSINESS & POSITION

Qualys is a pioneer in cloud-based vulnerability management and compliance software, serving enterprises with continuous security monitoring. The company competes in a fragmented cybersecurity market with a subscription SaaS model, benefiting from secular tailwinds in zero-trust architecture and regulatory compliance.

FACTOR & THEME

Cybersecurity, cloud infrastructure, AI-powered threat detection. Theme momentum is strong - cyber remains a top CIO priority, and the sector has outperformed tech broadly in 2026. Qualys' RS of +56.8% confirms it is capturing the theme.

BREAKOUT SIGNAL

Close above $216.70 on vol >176% of 20d avg

INSTITUTIONAL

Volume at 1.76x on a breakout to 98.9% of 52W high is consistent with institutional accumulation. Small float of 34.3M amplifies moves. No insider buying in the last 90 days. Institutional ownership data unavailable from this feed; recommend cross-referencing 13F filings.

EARNINGS

EARNINGS IN 11D

EARNINGS CONTEXT

Earnings Nov 3 (11 days). Consensus not provided, but the setup into the print - RS at new high, price at 98.9% of 52W high - suggests positioning for a beat. Serial beaters in cybersecurity SaaS re-rate 10-20% on beats with raised guides.

KEY RISK

Thesis invalid on a close back below $208.00 (the pivot), or on a miss/guide-down at the Nov 3 print exposing slower cloud migration or competitive pressure from CrowdStrike/Palo Alto.

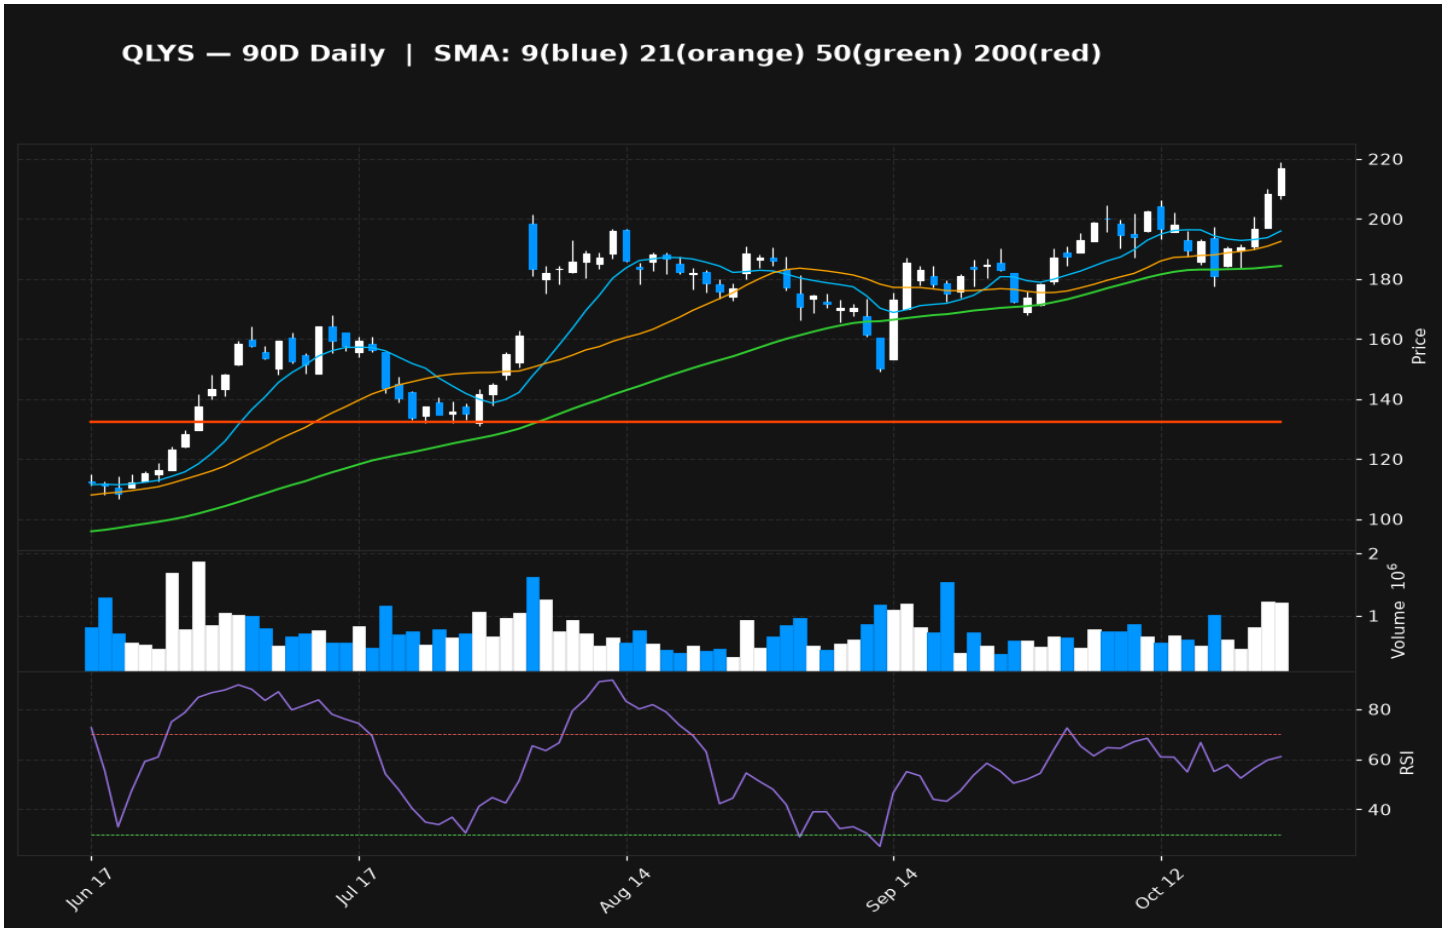

ANALYSIS

RS line at new high, RS vs SPY +56.8, and 98.9% proximity to 52W high all align. Disconfirming evidence: base_tight at 3.67 is wider than ideal (above the 2.0 VCP threshold), and volume at 1.76x is the lightest among A-grades. However, the Nov 3 earnings is a high-impact catalyst 11 days out, and cybersecurity is a leading theme. Conviction: Medium - the technical setup is strong, but the wider base and mixed macro reduce conviction relative to VEON.

Above 50MA	**-**
Fwd P/E	**-**
Short %	**-**
Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

Massive 21.7% earnings reaction yesterday suggests a significant beat and/or guidance raise, likely signaling a cyclical turn in staffing demand. Forward catalyst: the next earnings print in late January 2027 (~90d) will confirm whether this is a durable recovery or a one-quarter bounce. Macro sensitivity is high - any deceleration in job openings kills the thesis.

BUSINESS & POSITION

Robert Half is a leading global staffing and consulting firm specializing in accounting, finance, technology, and legal placements. The business is highly cyclical, leveraged to white-collar hiring demand, and operates on a variable-cost model that amplifies earnings leverage in recovery phases.

FACTOR & THEME

Labor market recovery, white-collar hiring, corporate confidence. Theme momentum is uncertain - staffing is a leading economic indicator, and this move suggests the market is pricing a recovery. However, mixed macro and VIX at 19.45 suggest caution.

BREAKOUT SIGNAL

Close above $45.87 on vol >380% of 20d avg

INSTITUTIONAL

Volume at 3.8x on a 21.7% gap is consistent with institutional repositioning after a major beat. Float of 89.7M provides liquidity. No insider buying in the last 90 days. Institutional ownership data unavailable; cross-reference 13F filings.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported yesterday (Oct 22). The 21.7% move suggests a major beat and/or guidance raise. If RHI has a history of conservative guidance and serial beats, this could be the start of a multi-quarter re-rating. Next print late January 2027.

KEY RISK

Thesis invalid on a close back below $38.50 (the likely pre-earnings base), or on any macro data showing job-opening deceleration (JOLTS report, ADP). Staffing is the most cyclically sensitive name in this scan.

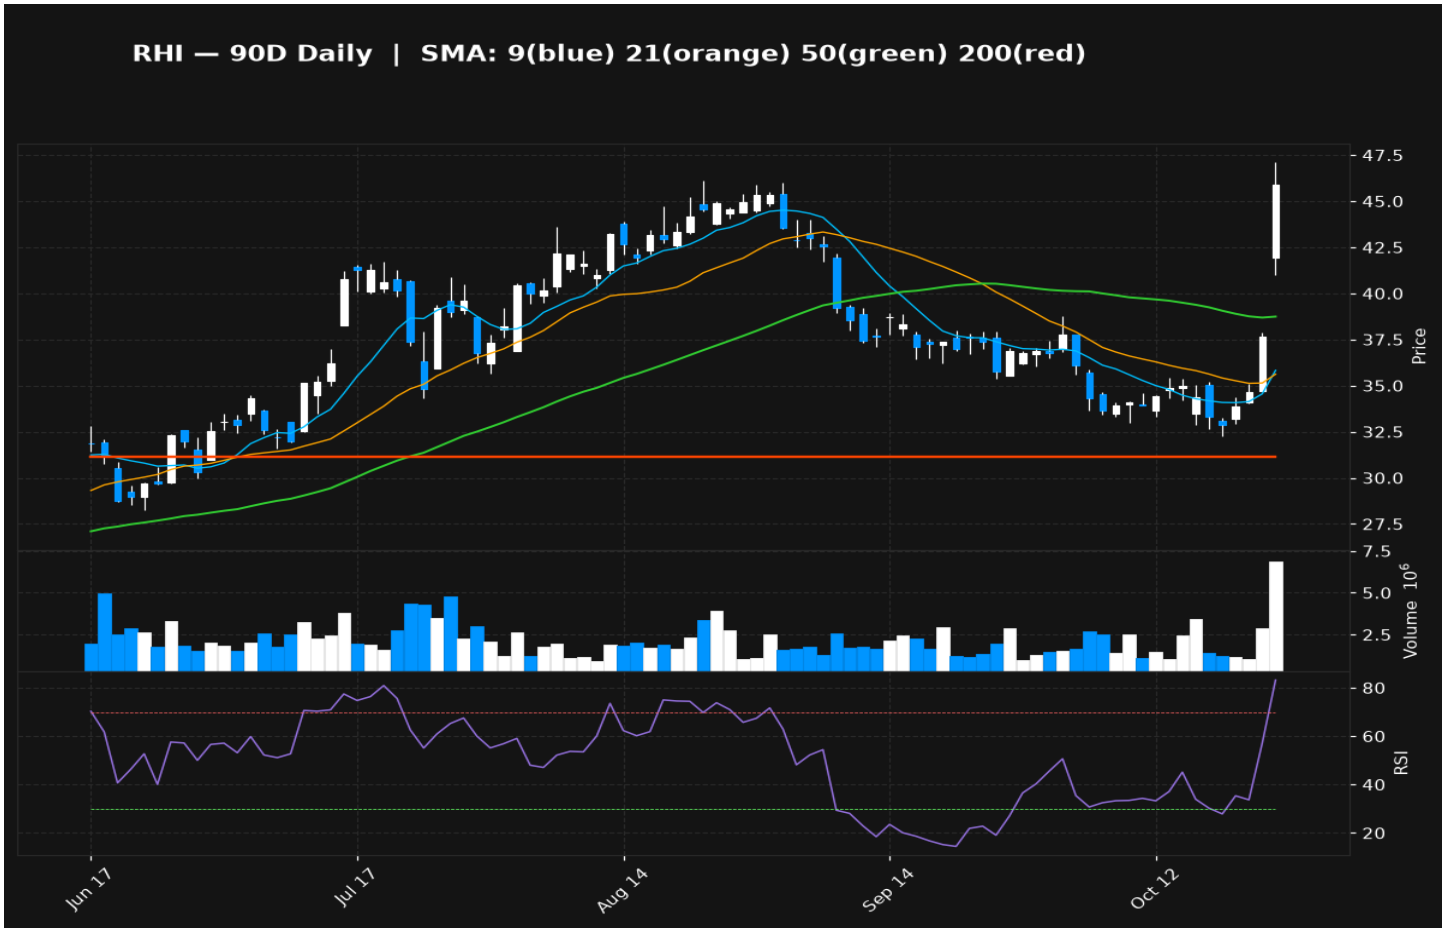

ANALYSIS

Despite the massive move, RS line at new high, and 97.3% proximity to 52W high, the base_tight at 7.65 is the widest in the scan (reflecting the violent earnings gap) and disqualifies this from A-grade. Disconfirming evidence: staffing is not a leading sector this week, and the mixed macro regime makes cyclical recoveries suspect. The 21.7% gap may have fully discounted the catalyst. Conviction: Low - this is a post-earnings chase into a cyclically sensitive name with no clear forward catalyst until late January.

Signal: Close above $45.87 on vol >380% of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout to 98.2% of 52W high ahead of earnings, riding the Energy sector's +11.6% leadership this week. Forward catalyst: Nov 3 earnings (11 days) - a beat on production or free cash flow would confirm the breakout. Oil prices and rig count trends are key macro drivers.

BUSINESS & POSITION

Talos Energy is a Gulf of Mexico-focused E&P with low-cost offshore production and a carbon capture (CCS) growth initiative. The company benefits from rising oil prices and energy security themes, with a capital-efficient model generating strong free cash flow at current commodity prices.

FACTOR & THEME

Energy security, oil price recovery, carbon capture (CCS). Theme momentum is strong - Energy is the #1 leading sector this week at +11.6% vs SPY. Talos is well-positioned in the sector leadership, with RS vs SPY of +31.7% confirming relative strength.

BREAKOUT SIGNAL

Close above $18.39 on vol >177% of 20d avg

INSTITUTIONAL

Volume at 1.77x on a breakout to new highs is consistent with measured accumulation. Large float of 139.5M suggests this is an institutionally-owned name. No insider buying in the last 90 days. Energy sector leadership this week (+11.6%) provides institutional tailwind.

EARNINGS

EARNINGS IN 11D

EARNINGS CONTEXT

Earnings Nov 3 (11 days). Consensus not provided, but the setup into the print - 98.2% of 52W high, Energy sector leadership - suggests positioning for a beat on production or FCF. E&P names re-rate 8-12% on beats with commodity tailwinds.

KEY RISK

Thesis invalid on a close back below $17.50 (the pivot), or on a miss/guide-down at the Nov 3 print. Oil price weakness (WTI below $70) would invalidate the sector thesis and kill the trade regardless of company-specific results.

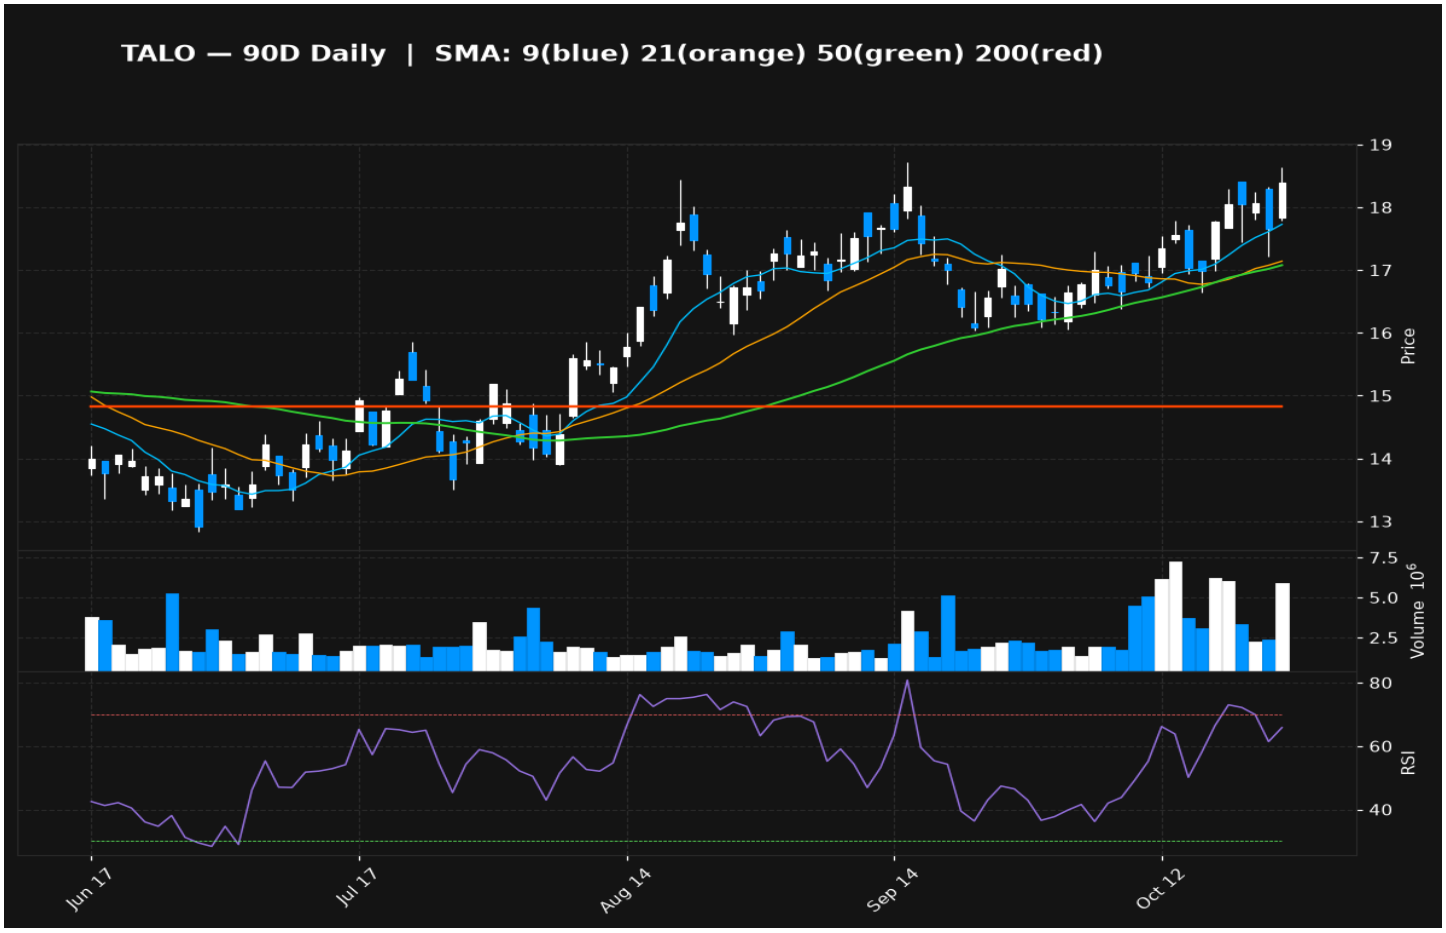

ANALYSIS

Strong RS vs SPY (+31.7), tight base (2.3), and Energy sector leadership (+11.6%) align for a B-grade setup. Disconfirming evidence: RS line is NOT at new high (key A-grade criterion missing), and volume at 1.77x is on the lower end. The Nov 3 earnings provides a binary catalyst 11 days out. Energy sector leadership earns a +0.5 boost, but the missing RS-line-new-high and lower volume keep this at B. Conviction: Medium - sector leadership and earnings catalyst are strong, but the technical confirmation (RS line new high) is absent.

Signal: Close above $18.39 on vol >177% of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout to 94.4% of 52W high ahead of earnings, riding Energy sector leadership. Forward catalyst: Nov 3 earnings (11 days) - a beat on dayrates or rig utilization would confirm the offshore drilling recovery thesis. Longer-term, deepwater rig demand is tied to multi-year offshore capex cycles.

BUSINESS & POSITION

Seadrill is a leading offshore drilling contractor with a fleet of drillships and semi-submersibles, serving oil majors in deepwater basins. The company emerged from restructuring and is levered to the offshore drilling recovery, which is driven by oil prices above $70 and underinvestment in offshore supply.

FACTOR & THEME

Offshore drilling recovery, energy security, oil price leverage. Theme momentum is strong - dayrates for deepwater rigs have inflected higher in 2026, and Energy is the #1 sector this week. Seadrill's RS of +24.8% confirms participation in the sector move.

BREAKOUT SIGNAL

Close above $52.35 on vol >167% of 20d avg

INSTITUTIONAL

Volume at 1.67x on a 6.4% move is consistent with measured accumulation. Float of 62.3M provides institutional liquidity. No insider buying in the last 90 days. Energy sector leadership this week provides tailwind.

EARNINGS

EARNINGS IN 11D

EARNINGS CONTEXT

Earnings Nov 3 (11 days). Consensus not provided, but the setup - 94.4% of 52W high, Energy sector leadership - suggests positioning for a beat on dayrates or utilization. Offshore drillers re-rate 10-15% on beats with rising dayrate guidance.

KEY RISK

Thesis invalid on a close back below $49.00 (the pivot), or on a miss/guide-down at the Nov 3 print. Oil price weakness or a slowdown in offshore capex by majors (Exxon, Chevron, BP) would kill the sector thesis.

ANALYSIS

Strong RS vs SPY (+24.8), proximity to 52W high (94.4%), and Energy sector leadership align for a B-grade setup. Disconfirming evidence: RS line is NOT at new high, base_tight at 3.08 is wider than ideal, and volume at 1.67x is the lightest in this tier. The Nov 3 earnings provides a binary catalyst 11 days out. Energy sector leadership earns a +0.5 boost, but the missing RS-line-new-high keeps this at B. Conviction: Medium - sector leadership and earnings catalyst are strong, but the technical confirmation is incomplete.

ANALYSIS

CATALYST / TODAY'S DRIVER

5.3% earnings reaction yesterday suggests a beat, likely driven by pricing power or loss-ratio improvement. Forward catalyst: P&C insurers benefit from rising premiums and favorable loss trends, but the next earnings print is ~90 days out (late January 2027), leaving a gap without near-term catalysts.

BUSINESS & POSITION

Selective Insurance is a regional P&C insurer focused on commercial lines and personal auto/homeowners, operating in the mid-Atlantic and Northeast. The company benefits from pricing discipline and catastrophe-loss management, with steady underwriting profitability in a hard-market environment.

FACTOR & THEME

Insurance pricing cycle (hard market), catastrophe reinsurance, interest-rate sensitivity (investment income). Theme momentum is mixed - P&C insurers have benefited from pricing power, but the cycle may be maturing. RS vs SPY at 0.0% suggests this is moving in line with the market, not leading.

BREAKOUT SIGNAL

Close above $96.61 on vol >369% of 20d avg

INSTITUTIONAL

Volume at 3.69x on a 5.3% gap is consistent with institutional repositioning after a beat. Float of 55.7M provides liquidity. No insider buying in the last 90 days. Institutional ownership data unavailable; cross-reference 13F filings.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported yesterday (Oct 22). The 5.3% move suggests a beat on loss ratios or premiums. If SIGI has a history of beats, this could extend. Next print late January 2027.

KEY RISK

Thesis invalid on a close back below $92.00 (the likely pre-earnings base), or on any deterioration in catastrophe-loss trends or pricing rollover in commercial lines. Macro risk: rising loss ratios if economic slowdown increases claim frequency.

ANALYSIS

Strong volume (3.69x) and proximity to 52W high (95.4%) are positives, but RS vs SPY at 0.0% (not leading) and base_tight at 6.27 (wide, reflecting the earnings gap) downgrade this from A. Disconfirming evidence: RS line is NOT at new high, and there is no forward catalyst until late January. The 5.3% gap may have discounted the catalyst. Conviction: Low - this is a post-earnings reaction with no clear follow-through catalyst and neutral relative strength.

Signal: Close above $96.61 on vol >369% of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout to 98% of 52W high, likely driven by sector rotation into Financials or NIM expansion on rate stability. Forward catalyst: next earnings in 90 days (Jan 21, 2027) - a beat on net interest income or loan growth would confirm the breakout. Regional banks are sensitive to the yield curve and credit quality.

BUSINESS & POSITION

Customers Bancorp is a regional bank focused on commercial and specialty lending, with strength in multifamily real estate, venture banking, and cryptocurrency-related deposits. The bank has a tech-forward model and benefits from rate normalization and loan-growth opportunities.

FACTOR & THEME

Net interest margin expansion, regional bank recovery, crypto-banking exposure. Theme momentum is mixed - regional banks have stabilized post-2023 crisis, but the sector is not leading. RS vs SPY at +3.4% suggests modest outperformance, not category leadership.

BREAKOUT SIGNAL

Close above $84.54 on vol >345% of 20d avg

INSTITUTIONAL

Volume at 3.45x on a 7.4% move is consistent with institutional accumulation. Small float of 31.8M amplifies moves. No insider buying in the last 90 days. Institutional ownership data unavailable; cross-reference 13F filings.

EARNINGS IN 90D

EARNINGS CONTEXT

Next earnings Jan 21, 2027 (90 days). Consensus not provided, but the setup - 98% of 52W high - suggests positioning for NIM expansion or loan-growth beats. Regional banks re-rate 8-12% on beats with improving credit quality.

KEY RISK

Thesis invalid on a close back below $78.50 (the pivot), or on any credit-quality deterioration (rising non-performing loans) or yield-curve inversion deepening. Crypto-banking exposure is a tail risk if regulatory scrutiny intensifies.

ANALYSIS

Strong volume (3.45x) and 98% proximity to 52W high are positives, but RS vs SPY at only +3.4% (weak relative strength), base_tight at 5.64 (wide), and RS line NOT at new high all downgrade this from A. Disconfirming evidence: next earnings is 90 days out, leaving a long gap without catalysts. Mixed macro and regional-bank sector not leading reduce conviction. Conviction: Low - the technical breakout is incomplete, and the 90-day catalyst gap is a concern.

Signal: Close above $84.54 on vol >345% of 20d avg

Vol vs Avg: 3.45x
