Analysis
Catalyst / Today's Driver
Breakout to new 52W high on strong volume (4.75x) with RS line confirming leadership. Forward catalyst: November 4 earnings print is 49 days out, providing a clear re-rating opportunity if the company beats and raises guidance on post-acute care demand recovery and margin expansion.
Business & Position
Operates skilled nursing and senior living facilities across multiple states, benefiting from demographic tailwinds (aging population) and post-COVID operational normalization. Category leader in the fragmented post-acute care space, with a track record of bolt-on M&A to drive growth.
Factor & Theme
Healthcare services benefiting from aging demographics and Medicaid/Medicare rate increases. Secular tailwind remains intact; theme momentum is steady rather than explosive, but the company's execution is differentiating it from peers, as evidenced by the RS line at new highs.
Breakout Signal
Close above \$42.48 on vol >4.75x of 20d avg, RS line at new high, prox_52w 99.5%
Institutional
Volume surge to 4.75x average on a breakout to new highs indicates institutional accumulation. No insider buying in the last 60 days, but the technical setup (RS line new high + volume confirmation + prox_52w at 99.5) is textbook Qullamaggie institutional breakout. Float of 33M allows for liquid institutional rotation without spiking slippage.
Earnings
Earnings in 49D
Earnings Context
November 4 earnings print. Consensus and beat history not provided, but the breakout timing (49 days ahead of the print) suggests the market is positioning for a beat-and-raise scenario. Recommend verifying consensus EPS/revenue and last 4 quarters' beat/miss record.
Key Risk
Thesis invalidated on a close back below \$40.00 (the prior 52W high breakout level from early September) or on any guidance cut at the November 4 print. Healthcare labor cost inflation or Medicaid reimbursement pressure could compress margins and derail the setup.
Analysis
Disconfirming: base_tight at 3.69 is wider than ideal (not a classic VCP), and the stock is already at all-time highs, limiting chart-resistance context. However, five criteria met: vol >2x, prox_52w >85, rs_line_new_high, rs_vs_spy >10, and a durable forward catalyst (earnings in 49d). In a mixed macro regime, the healthcare defensive quality supports the setup. Conviction: Medium.

Analysis
Catalyst / Today's Driver RS line at new high with +74% outperformance vs SPY signals dominant leadership in the cloud contact-center space, likely driven by AI-powered customer-engagement tailwinds. Forward catalyst: November 9 earnings (54 days out) provides a re-rating opportunity if the company beats on AI adoption and expands operating margins.
Business & Position Leading cloud-based contact-center-as-a-service (CCaaS) platform, competing with Genesys and Twilio. Differentiated by AI-driven automation (intelligent virtual agents, workflow optimization), which is driving upsell and net retention above 100%. Category leader in a consolidating market.
Factor & Theme Direct exposure to AI-driven enterprise software adoption, particularly in customer service automation. Secular tailwind is accelerating as enterprises shift call-center spend from legacy on-prem systems to cloud + AI. Technology sector is the third-leading sector this week (+2.1% vs SPY), providing macro support.
Breakout Signal Close above \$34.08 on vol >2.0x of 20d avg, RS line at new high, prox_52w 96.9%, base_tight 2.55
Institutional Volume at 2.0x on a +3.2% day suggests steady institutional accumulation rather than a blow-off spike. The RS line at new high with +74% outperformance is the strongest relative-strength signal in the dataset, indicating smart money has been positioning ahead of the November earnings catalyst. No insider buying in last 60 days, but the technical leadership is unambiguous.
Earnings Earnings in 54D
Earnings Context November 9 earnings print, 54 days out. Consensus not provided, but the stock's +74% RS vs SPY suggests the market is pricing in sustained beat-and-raise execution. Verify last 4 quarters' beat/miss history; if this is a serial beater, the setup strengthens materially.
Key Risk Thesis invalidated on a close below \$32.00 (prior pivot from late August base) or on any guidance miss/cut at the November 9 print. Competitive pressure from Microsoft (Teams integration with CCaaS) or macro-driven IT-budget cuts could derail growth expectations.
Analysis Disconfirming: already at 96.9% of 52W high leaves minimal chart room for expansion, and a mixed macro regime reduces follow-through probability for software names. However, the +74% RS vs SPY is the dataset's top performer, RS line new high + base_tight <2.6 + clear AI theme + earnings catalyst in 54d = five A-grade criteria met. Technology sector leadership this week (+2.1%) adds a +0.5 grade tailwind. Conviction: High.
Signal: Close above \$34.08 on vol >2.0x of 20d avg, RS line at Vol vs Avg: 2.0x

ADPT

Adaptive Biotechnologies Corporation

\$27.67

+3.71%

RS vs SPY: +62.9%

A BREAKOUT

\$4.4B Cap | 126M Float

Diagnostics & Research | Theme: Immune-medicine diagnostics | 52W Hi: 96% | Base Tight: 3.08 | Vol: 2.85x | RS/SPY: +62.9% | Above 20MA: YES | EARNINGS IN 49D

RS Line Hi	YES
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

Analysis
Catalyst / Today's Driver RS line at new high with +62.9% outperformance signals leadership in immune-medicine diagnostics, likely driven by traction in minimal residual disease (MRD) testing in oncology. Forward catalyst: November 4 earnings (49 days out) could drive re-rating if the company reports accelerating MRD adoption and expanding pharma partnerships.
Business & Position Pioneering immune-medicine platform using T-cell receptor sequencing to map the adaptive immune system. Core revenue from clonoSEQ (FDA-cleared MRD test for blood cancers) and pharma partnerships for drug development. Leader in a high-growth, defensible niche with network-effect moats (largest immune-receptor database globally).
Factor & Theme Exposure to precision oncology and personalized medicine, with tailwinds from increasing adoption of MRD testing as standard-of-care in blood cancers and potential expansion into solid tumors. Not a direct AI or GLP-1 play, but benefits from broader biotech M&A appetite and healthcare innovation spend.
Breakout Signal Close above \$27.67 on vol >2.85x of 20d avg, RS line at new high, prox_52w 96.3%
Institutional Volume at 2.85x on a +3.7% day indicates institutional accumulation. RS line at new high with +62.9% outperformance vs SPY is top-quartile leadership, suggesting smart money is positioning ahead of the November 4 catalyst. No insider buying in last 60 days. Float of 125M is large enough for institutional liquidity but creates less squeeze potential than smaller floats.
Earnings Earnings in 49D
Earnings Context November 4 earnings print, 49 days out. Consensus not provided, but the RS line new high suggests the market is pricing in a beat. Recommend verifying last 4 quarters' beat/miss and whether the company has a track record of raising guidance, which would strengthen the forward setup.
Key Risk Thesis invalidated on a close below \$25.00 (prior pivot/support from August) or on any earnings miss or guidance cut at the November 4 print. Pharma partnership delays or slower-than-expected MRD adoption in community oncology could compress growth expectations.
Analysis Disconfirming: base_tight at 3.08 is acceptable but not textbook-tight, and prox_52w at 96.3% leaves minimal chart room. However, five A-grade criteria met: vol >2x, prox_52w >85, rs_line_new_high, rs_vs_spy >10, and a forward earnings catalyst in 49d. The +62.9% RS is third-strongest in the dataset, indicating institutional conviction. Mixed macro slightly caps upside. Conviction: Medium.
Signal: Close above \$27.67 on vol >2.85x of 20d avg, RS line at Vol vs Avg: 2.85x

RS Line Hi	YES
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
Breakout to 98.3% of 52W high on volume (2.03x) with RS line at new high, driven by strength in refined-product tanker rates amid tight vessel supply and robust global demand. Forward catalyst: November 4 earnings (49 days out) could drive re-rating if the company reports elevated dayrates and announces increased capital returns (dividends/buybacks).
BUSINESS & POSITION
One of the world's largest product-tanker operators, transporting refined petroleum products (gasoline, diesel, jet fuel) globally. Benefits from structural supply constraints (limited newbuild orderbook, aging fleet, IMO 2020 regulations) and cyclical demand recovery. Category leader in a consolidated, high-barrier-to-entry industry.
FACTOR & THEME
Direct exposure to energy sector, which is the second-leading sector this week (+2.7% vs SPY), providing macro tailwind. Benefits from elevated refining margins, geopolitical disruptions extending shipping distances, and limited vessel supply. Secular theme is moderating (not accelerating), but cyclical positioning remains favorable into Q4 2026.
BREAKOUT SIGNAL
Close above \$36.60 on vol >2.03x of 20d avg, RS line at new high, prox_52w 98.3%
INSTITUTIONAL
Volume at 2.03x on a +4.8% day suggests institutional participation. RS line at new high with +33.4% outperformance signals smart money positioning in energy midstream ahead of the November 4 catalyst. No insider buying in last 60 days. Energy sector leadership (+2.7% this week) provides a +0.5 grade tailwind when setup quality is equal.
EARNINGS
EARNINGS IN 49D
EARNINGS CONTEXT
November 4 earnings print, 49 days out. Consensus not provided, but the stock's breakout to near-52W highs suggests the market is pricing in strong dayrate guidance and elevated capital-return announcements. Verify last 4 quarters' beat/miss and dividend history.
KEY RISK
Thesis invalidated on a close below \$33.00 (prior pivot from August consolidation) or on any dayrate weakness or capital-return reduction at the November 4 print. A sharp drop in refining margins or unexpected vessel-supply increases (accelerated newbuild deliveries) could compress spot rates and derail the thesis.
ANALYSIS
Disconfirming: base_tight at 4.95 is wide (failed VCP discipline), and the stock is at 98.3% of 52W high with minimal chart room. RS line new high + sector leadership (+2.7% Energy this week) + forward earnings catalyst in 49d support the setup, but only four A-grade criteria fully met (vol >2x, prox_52w >85, rs_line_new_high, rs_vs_spy >10; base_tight fails). Mixed macro and cyclical-sector risk warrant a B grade despite energy sector strength. Conviction: Medium.
Signal: Close above \$36.60 on vol >2.03x of 20d avg, RS line at
Vol vs Avg: 2.03x

ANALYSIS
CATALYST / TODAY'S DRIVER
Breakout from a tight base (base_tight 1.97, near-textbook VCP) on volume (1.73x), positioning at 87.8% of 52W high. Forward catalyst: November 3 earnings (48 days out) provides re-rating opportunity if the company reports accelerating take rates on its manufacturing marketplace and expanding enterprise customer adoption.
BUSINESS & POSITION
Operates an on-demand manufacturing marketplace connecting buyers with a network of suppliers for custom parts (CNC, 3D printing, injection molding, sheet metal). AI-powered quoting and supply-chain optimization differentiate the platform. Leader in the fragmented \$350B+ custom-manufacturing market, benefiting from digitization and just-in-time inventory trends.
FACTOR & THEME
Exposure to industrial digitization, reshoring (domestic manufacturing preference post-pandemic), and AI-driven supply-chain optimization. Theme momentum is moderate; not a pure AI or defense play, but benefits from enterprises seeking supply-chain resilience and speed-to-market.
BREAKOUT SIGNAL
Close above \$93.15 on vol >1.73x of 20d avg, base_tight 1.97 (VCP coil), prox_52w 87.8%
INSTITUTIONAL
Volume at 1.73x is modest but acceptable given the tight base (1.97 ATR ratio). The textbook VCP coil suggests institutions have been quietly absorbing supply without spiking price-classic silent-build pattern. No insider buying in last 60 days. Float of 52M provides institutional liquidity. November 3 earnings catalyst (48d out) gives institutions time to position.
EARNINGS
EARNINGS IN 48D
EARNINGS CONTEXT
November 3 earnings print, 48 days out. Consensus not provided, but the tight base and breakout timing suggest the market is pricing in a beat. Recommend verifying last 4 quarters' beat/miss history and whether the company has consistently raised guidance, which would strengthen the setup.
KEY RISK
Thesis invalidated on a close back below \$85.00 (the base pivot from late August) or on any earnings miss or guidance cut at the November 3 print. Macro-driven weakness in industrial capex or competitive pressure from legacy distributors offering digital platforms could slow growth.
ANALYSIS
Disconfirming: rs_vs_spy at +2.8 is barely positive, and rs_line_new_high is false, indicating leadership is not yet confirmed. Volume at 1.73x is below the 2.0x threshold for A-grade conviction. However, the base_tight at 1.97 is textbook VCP quality, and prox_52w at 87.8% positions this in breakout zone with a forward earnings catalyst in 48d. In a mixed macro regime, the lack of RS confirmation downgrades this from A to B. Conviction: Medium.
Signal: Close above \$93.15 on vol >1.73x of 20d avg, base_tight
Vol vs Avg: 1.73x

PRLB

Proto Labs, Inc.

Inst. Own	-(data lag)

Analysis
Catalyst / Today's Driver Breakout from a tight base (base_tight 2.16) on elevated volume (2.06x), positioning at 89.5% of 52W high. Forward catalyst: October 30 earnings (44 days out) provides re-rating opportunity if the company reports margin expansion from automation investments and accelerating demand for rapid prototyping in automotive/aerospace end markets.
Business & Position Provides rapid prototyping and low-volume production services using automated CNC machining, injection molding, and 3D printing. Differentiated by speed-to-market (quotes in hours, parts in days) and proprietary software that automates design-for-manufacturability. Leader in a niche serving product-development teams across automotive, medical devices, and aerospace.
Factor & Theme Exposure to industrial digitization, reshoring (domestic manufacturing preference), and product-development cycle acceleration. Not a pure AI or defense theme, but benefits from enterprises seeking faster time-to-market and supply-chain flexibility. Theme momentum is moderate.
Breakout Signal Close above \$83.24 on vol >2.06x of 20d avg, base_tight 2.16, prox_52w 89.5%
Institutional Volume at 2.06x on a +5.25% day suggests institutional participation. The tight base (2.16 ATR ratio) indicates controlled accumulation rather than retail FOMO. No insider buying in last 60 days. Float of 23.6M is small enough to allow for strong follow-through if institutions add on the October 30 earnings catalyst.
Earnings Earnings in 44D
Earnings Context October 30 earnings print, 44 days out. Consensus not provided, but the tight base and breakout timing suggest the market is positioning for a beat. Recommend verifying last 4 quarters' beat/miss history and whether the company has a track record of raising guidance post-earnings.
Key Risk Thesis invalidated on a close back below \$77.00 (the base pivot from early September) or on any earnings miss or guidance cut at the October 30 print. Macro-driven weakness in industrial capex or competitive pressure from in-house rapid-prototyping capabilities could slow growth.
Analysis Disconfirming: rs_vs_spy at +2.6 is barely positive, and rs_line_new_high is false, indicating leadership is not confirmed. However, four criteria support a B grade: vol >2x, prox_52w >85, base_tight <2.2 (near-textbook VCP), and a forward earnings catalyst in 44d. In a mixed macro regime, the lack of RS confirmation and modest relative strength limit this to a B-grade follow-through candidate. Conviction: Medium.
Signal: Close above \$83.24 on vol >2.06x of 20d avg, base_tight Vol vs Avg: 2.06x

Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
Strong single-day move (+8.83%) on elevated volume (2.13x), positioning at 92.9% of 52W high. Forward catalyst: November 3 earnings (48 days out) provides re-rating opportunity if the company reports accelerating demand for mass spectrometry and NMR instrumentation driven by pharma R&D spend and academic research budgets.
BUSINESS & POSITION
Leading manufacturer of high-end scientific instruments (mass spectrometry, NMR, X-ray diffraction) used in life sciences, materials research, and industrial quality control. Category leader in a duopolistic market (competes with Thermo Fisher, Agilent), with recurring revenue from service contracts and consumables. Premium valuation justified by mission-critical products and high switching costs.
FACTOR & THEME
Exposure to life-science R&D spend, particularly in pharma drug discovery and academic research. Not a direct AI or GLP-1 play, but benefits from elevated biotech funding and NIH budget increases. Theme momentum is steady rather than accelerating; this is a quality compounder rather than a thematic rocket.
BREAKOUT SIGNAL
Close above \$60.67 on vol >2.13x of 20d avg, prox_52w 92.9%
INSTITUTIONAL
Volume at 2.13x on an +8.83% gap suggests institutional block buying, likely tied to a specific catalyst (check for an analyst upgrade, partnership announcement, or contract win on Sept 16). No insider buying in last 60 days. Float of 103.7M is large, providing institutional liquidity but reducing squeeze potential. The November 3 earnings catalyst (48d out) gives institutions time to add.
EARNINGS
EARNINGS IN 48D
EARNINGS CONTEXT
November 3 earnings print, 48 days out. Consensus not provided, but the +8.83% move suggests the market is pricing in a beat. Recommend verifying last 4 quarters' beat/miss history and whether the company has a track record of raising full-year guidance, which would strengthen the setup.
KEY RISK
Thesis invalidated on a close back below \$55.00 (prior consolidation support from August) or on any earnings miss or guidance cut at the November 3 print. Macro-driven cuts to academic research budgets or slower pharma R&D spend could compress growth expectations.
ANALYSIS
Disconfirming: rs_vs_spy at +8.9 is positive but modest, rs_line_new_high is false (leadership not confirmed), and the large \$9.24B market cap (near the \$10B filter ceiling) reduces SMID-cap volatility/upside. However, vol >2x, prox_52w >85, and a forward earnings catalyst in 48d support a B grade. The +8.83% single-day move warrants investigation into the specific catalyst (check for news). Mixed macro caps conviction. Conviction: Medium.
Signal: Close above \$60.67 on vol >2.13x of 20d avg, prox_52w 9
Vol vs Avg: 2.13x

ANALYSIS
CATALYST / TODAY'S DRIVER
Emerging from a textbook-tight base (base_tight 1.71, best in dataset) on elevated volume (2.23x), signaling institutional accumulation. Forward catalyst: October 29 earnings (43 days out) provides re-rating opportunity if the company reports accelerating volume growth in home infusion and expanding operating margins from scale efficiencies.
BUSINESS & POSITION
Largest independent provider of home and alternate-site infusion services in the U.S., delivering IV medications (oncology, immunology, anti-infectives) in patients' homes or clinics. Benefits from secular shift from hospital to home (cost savings, patient preference) and expansion of specialty pharma requiring infusion. Category leader in a fragmented, high-barrier-to-entry market.
FACTOR & THEME
Exposure to healthcare cost-containment (site-of-care shift to lower-cost home settings) and specialty pharma adoption (biosimilars, CAR-T, gene therapy requiring infusion). Secular tailwind is durable; theme momentum is steady. Not a hot AI or GLP-1 play, but a quality defensive healthcare grower.
BREAKOUT SIGNAL
Close above \$24.47 on vol >2.23x of 20d avg, base_tight 1.71 (tightest in dataset)
INSTITUTIONAL
Volume at 2.23x combined with the tightest base in the dataset (1.71 ATR ratio) signals classic silent-build accumulation-institutions absorbing supply without spiking price. No insider buying in last 60 days. Float of 147.7M is large, reducing squeeze potential but providing institutional liquidity. October 29 earnings (43d out) gives institutions time to position.

EARNINGS IN 43D
EARNINGS CONTEXT
October 29 earnings print, 43 days out. Consensus not provided, but the textbook-tight base suggests institutions are positioning for a beat. Recommend verifying last 4 quarters' beat/miss history and whether the company has consistently raised full-year guidance, which would validate the setup.
KEY RISK
Thesis invalidated on a close back below \$22.50 (the base pivot from August) or on any earnings miss or guidance cut at the October 29 print. Payor reimbursement pressure or slower-than-expected specialty pharma adoption could compress growth expectations.
ANALYSIS
Disconfirming: prox_52w at 66.5 is well below the 85+ breakout zone (stock is mid-base, not breaking out), and rs_line_new_high is false (leadership not confirmed). However, the base_tight at 1.71 is the best VCP coil in the entire dataset, vol >2x, and a forward earnings catalyst in 43d create a high-quality setup-in-progress. This is a watch-to-buy rather than a buy-now; it hasn't broken out yet. B grade for technical quality, but conviction is medium until prox_52w exceeds 75+. Conviction: Medium.
Signal: Close above \$24.47 on vol >2.23x of 20d avg, base_tight
Vol vs Avg: 2.23x
