ANALYSIS
CATALYST / TODAY'S DRIVER
Breakout from textbook VCP coil (base_tight 1.28) on volume surge as stock approaches 52W high. Forward catalyst: November 9 earnings (33d) where Viant can capitalize on accelerating AI-driven ad targeting and CTV adoption themes.
BUSINESS & POSITION
Viant operates a people-based advertising platform enabling precision targeting across connected TV, mobile, and digital channels using proprietary identity graph. The company is positioned to benefit from the secular shift away from cookie-based tracking toward first-party data and CTV advertising growth.
FACTOR & THEME
Exposed to AI-driven marketing automation and the CTV advertising wave as linear TV budgets shift digital. Theme momentum is strong given Q4 advertising seasonality and ongoing portfolio reallocation toward programmatic platforms.
BREAKOUT SIGNAL
Close above \$12.78 on vol >2.0x of 20d avg
INSTITUTIONAL
Volume 2.0x average with tight 20.2M float creates good technical setup for momentum players. No insider activity in last 90d. Low float and micro-cap status (\$850M) means institutional sponsorship is likely thin - this is a technically-driven setup, not an institutional accumulation story yet.
EARNINGS
EARNINGS IN 33D
EARNINGS CONTEXT
November 9 print is critical inflection - company needs to demonstrate margin expansion and enterprise client traction to justify premium. Last four quarters show mixed execution; a beat with raised guidance could re-rate the stock significantly given proximity to highs.
KEY RISK
Thesis invalid on a close back below \$11.50 (base pivot), or on any revenue/margin miss at the November 9 print that signals competitive pressure from Trade Desk or Google in programmatic CTV.
ANALYSIS
Textbook VCP setup (base_tight 1.28) with breakout volume and proximity to 52W high (86.4) checks all technical boxes. Disconfirming evidence: RS line not at new high and RS vs SPY is negative (-6.2), indicating this is a lagging name catching up rather than a true market leader. Technology sector tailwind (+6.0% this week) provides lift. Earnings 33d out is well-timed catalyst window. Conviction: Medium - pure technical play without fundamental or insider confirmation.

Analysis
Catalyst / Today's Driver Volume surge (3.5x) driving breakout to within 3% of 52W high ahead of October 28 earnings (21d). Forward catalyst: earnings print where utility can demonstrate rate case wins and transmission capex ROI in Montana/South Dakota markets; potential special dividend or guidance raise given regulated cash flow stability.
Business & Position NorthWestern Energy is a vertically-integrated utility serving electric and natural gas customers across Montana, South Dakota, Nebraska, and Yellowstone National Park. The company benefits from constructive regulatory environments and ongoing transmission infrastructure investment.
Factor & Theme Defensive positioning in risk-on environment typically underperforms, but utilities are breaking out due to AI data center power demand and transmission investment themes. Grid modernization and renewable integration spending provide secular tailwind, though theme momentum in utilities is decelerating vs. growth sectors.
Breakout Signal Close above \$73.97 on vol >3.5x of 20d avg
Institutional Volume 3.5x on a utility is unusual and suggests institutional repositioning or index rebalancing flow. 61M float is reasonable for block trades. No insider activity in last 90d. Utilities typically have 70-80% institutional ownership; lack of data here does not imply zero ownership - cross-reference 13F filings for validation.
Earnings Earnings in 21D
Earnings Context October 28 print (21d out) will focus on rate case outcomes, weather-normalized usage trends, and 2027 capex guidance. Utilities are valued on dividend yield and regulated ROE; a guidance raise or special dividend announcement would extend the move. Company typically delivers stable, predictable results.
Key Risk Thesis invalid on a close back below \$70.00 (20MA support), or on any regulatory setback or capex guidance cut at the October 28 print that compresses the forward ROE outlook.
Analysis Proximity to 52W high (97.3%) and tight base (3.8) with unusual volume surge for a utility signal institutional flow. Disconfirming evidence: RS line not at new high, RS vs SPY essentially flat (-0.5), and sector (Utilities) is anti-correlated to current risk-on regime where mega-cap tech leads. This is a defensive rotation play, not a momentum leader. Earnings 21d out is ideal catalyst window. Conviction: Medium - clean technical setup but wrong sector for the current macro regime.
Signal: Close above \$73.97 on vol >3.5x of 20d avg Vol vs Avg: 3.5x

ANALYSIS
CATALYST / TODAY'S DRIVER
Breakout to within 4% of 52W high on 3.9x volume as utility complex sees defensive flow rotation. Forward catalyst: November 4 earnings (28d) where Black Hills can highlight natural gas infrastructure investment returns and winter weather-driven volume outlook across its multi-state footprint.
BUSINESS & POSITION
Black Hills is a diversified energy company delivering natural gas and electric service to 1.3M customers across eight Western and Midwestern states. The company benefits from constructive regulatory jurisdictions and ongoing investment in gas distribution infrastructure and renewable generation.
FACTOR & THEME
Benefits from natural gas infrastructure investment theme and winter heating demand seasonality. Energy transition tailwind is modest (gas distribution, not renewables pure-play). Utility sector is currently out-of-favor in risk-on environment dominated by large-cap tech leadership.
BREAKOUT SIGNAL
Close above \$75.84 on vol >3.9x of 20d avg
INSTITUTIONAL
Volume 3.9x is significant for a regulated utility and likely reflects institutional rebalancing or ETF flow. 75.9M float provides adequate liquidity. No insider activity in last 90d. Institutional ownership data unavailable from this feed; recommend cross-referencing 13F filings - most utilities carry 60-80% institutional ownership.
EARNINGS
EARNINGS IN 28D
EARNINGS CONTEXT
November 4 print (28d) will focus on rate case decisions in Colorado and Wyoming, weather-adjusted customer growth, and capital allocation priorities. Utilities are income vehicles; dividend sustainability and any increase signal would support the breakout. Company has stable earnings history typical of regulated utilities.
KEY RISK
Thesis invalid on a close back below \$71.50 (base support), or on any rate case denial or capex program delay at the November 4 print that undermines the regulated ROE growth trajectory.
ANALYSIS
Technically strong with prox_52w 96.4% and base_tight 4.0, plus volume confirmation (3.9x). Disconfirming evidence: RS line not at new high, RS vs SPY negative (-1.4), and Utilities sector is facing a macro headwind in the current large-cap-led risk-on regime. This is a sector rotation / defensive play, not a growth momentum leader. Earnings catalyst 28d out is well-positioned. Conviction: Medium - solid technical setup in the wrong macro environment for utilities.
Signal: Close above \$75.84 on vol >3.9x of 20d avg

RS Line Hi	no
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
Volume surge (3.6x) on essentially flat price (+0.03%) suggests institutional accumulation without spiking the stock - classic absorption pattern. Forward catalyst: November 4 earnings (28d) where company can demonstrate GLP-1 infusion growth, immunoglobulin volume expansion, and operating leverage as scale benefits materialize.
BUSINESS & POSITION
Option Care Health is the largest independent provider of home and alternate site infusion services in the U.S., administering complex therapies including immunoglobulin, anti-infectives, and emerging biologics. The company benefits from the structural shift of high-acuity care from hospital to home, driven by payer incentives and patient preference.
FACTOR & THEME
Direct exposure to GLP-1 theme via compounded semaglutide infusion services and broader home healthcare secular trend. Healthcare sector is neutral this week (-0.5% vs SPY) but OPCH's +40.6% 12-week RS vs SPY shows it's a category outlier. Theme momentum is accelerating given Medicare Advantage penetration and hospital-at-home regulatory tailwinds.
BREAKOUT SIGNAL
Close above \$31.01 on vol >3.6x of 20d avg
INSTITUTIONAL
Volume 3.6x on flat price is textbook silent accumulation - institutions absorbing supply without telegraphing intent. 147.7M float at upper end of filter but provides deep liquidity for block trades. No insider activity in last 90d. Institutional ownership data unavailable; given \$4.6B market cap and healthcare sector, expect 70-85% institutional ownership - verify via 13F.
EARNINGS
EARNINGS IN 28D
EARNINGS CONTEXT
November 4 print (28d) is critical - consensus likely focused on same-site growth, payer mix improvement, and margin trajectory as company scales. OPCH historically beats on volume but needs to show margin expansion to justify valuation. Last four quarters have shown consistent top-line growth; an earnings beat with raised EBITDA guidance could drive re-rating.
KEY RISK
Thesis invalid on a close back below \$28.50 (20MA support), or on any guidance cut or payer reimbursement pressure signaled at the November 4 print that undermines the home infusion volume thesis.
ANALYSIS
Strongest RS vs SPY in the candidate set (+40.6) and Healthcare sector bonus (+0.5 grade for equal setup quality) elevate this, but the extremely wide base (13.4) and RS line not at new high disqualify it from A-grade. Disconfirming evidence: the volume spike on flat price could also be a distribution day disguised as accumulation if large holders are rotating out. GLP-1 theme is hot but OPCH's exposure is indirect. Conviction: Medium - excellent relative strength and sector tailwind, but base quality is poor and setup is not yet fully formed.
Signal: Close above \$31.01 on vol >3.6x of 20d avg
Vol vs Avg: 3.6x

BRZE

Braze, Inc.

\$28.46

+8.05%

RS vs SPY: +10.0%

B STRONG SETUP

\$3.2B Cap | 94M Float

Software - Application | Theme: Marketing Automation / AI | 52W Hi: 76% | Base Tight: 4.07 | Vol: 1.6x | RS/SPY: +10.0% | Above 20MA: YES | EARNINGS IN 62D

Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
Breakout from base on 8% gain with volume 1.6x as SaaS name participates in Technology sector strength (+6.0% this week). Forward catalyst: December 8 earnings (62d) where Braze can demonstrate AI-powered customer engagement wins, enterprise NRR expansion, and operating margin improvement as company approaches profitability inflection.
BUSINESS & POSITION
Braze is a customer engagement platform enabling real-time, personalized messaging across mobile, web, email, and connected devices. The company serves enterprise brands seeking to orchestrate omnichannel campaigns using AI-driven insights and predictive analytics.
FACTOR & THEME
Exposed to AI-driven marketing automation and the broader shift to real-time personalization in enterprise SaaS. Technology sector is the strongest performer this week (+6.0% vs SPY), providing sector tailwind. Theme momentum is accelerating as enterprises prioritize customer data platforms and AI-native tooling.
BREAKOUT SIGNAL
Close above \$28.46 on vol >1.6x of 20d avg
INSTITUTIONAL
Volume 1.6x is modest for a breakout, suggesting early-stage move rather than institutional chase. 94.1M float provides good liquidity. No insider activity in last 90d. Institutional ownership data unavailable; given \$3.2B market cap and venture-backed SaaS profile, expect 60-75% institutional ownership from growth funds - verify via 13F.
EARNINGS
EARNINGS IN 62D
EARNINGS CONTEXT
December 8 print (62d) is beyond ideal catalyst window but still relevant. Consensus will focus on enterprise logo wins, net revenue retention (key metric for SaaS), and path to GAAP profitability. Braze needs to demonstrate it can compete against Adobe, Salesforce, and other martech giants. Mixed execution history - needs a clean beat to extend this move.
KEY RISK
Thesis invalid on a close back below \$26.00 (20MA support), or on any NRR decline or enterprise churn signal at the December 8 print that suggests competitive pressure from larger platforms.
ANALYSIS
Technology sector bonus (+0.5 grade) and positive RS vs SPY (+10.0) support the setup. Disconfirming evidence: volume is only 1.6x (weakest in the B-grade cohort), prox_52w is only 76.2 (not in breakout zone), and base_tight 4.07 is loose. RS line not at new high. Earnings 62d out is too far to be the primary catalyst for this move. Conviction: Medium - sector tailwind and AI theme are compelling, but technical setup is incomplete and volume confirmation is weak.
Signal: Close above \$28.46 on vol >1.6x of 20d avg
Vol vs Avg: 1.6x
