CATALYST INTELLIGENCE
EARNINGS

Aug 13 - Pre-revenue biotech; consensus expects EPS of -\$0.72 for Q2 (loss narrowing vs prior quarters). No revenue to beat - the call will focus on TYRA-300 clinical updates, cash runway (currently ~\$300M, sufficient through 2027), and enrollment progress in registrational trials. Beat/miss pattern is irrelevant for clinical-stage; what matters is pipeline milestones.

BUSINESS & POSITION
Tyra Biosciences is a clinical-stage biotech developing precision medicines targeting oncogenic FGFR alterations, with lead asset TYRA-300 in late-stage trials for bladder cancer and cholangiocarcinoma - differentiated as a selective 'tumor-sparing' FGFR3 inhibitor designed to avoid hyperphosphatemia toxicity that plagues competitors. The company occupies a fast-follower position in the FGFR space behind J&J's erdafitinib but with a cleaner safety profile that could capture significant share in a \$2B+ addressable market.

FACTOR & THEME
Exposed to the biotech innovation cycle theme, which is in early-stage recovery as Fed policy normalizes and XBI has bottomed; peer read-through from recent FGFR data presentations (Relay, Erasca) has been mixed but tolerability differentiation remains Tyra's wedge. Sentiment in precision oncology is cautiously constructive after multiple FDA accelerated approvals in 2026.

NEWS FLOW
Key upcoming catalyst: TYRA-300 Phase 2 bladder cancer data expansion cohort expected H2 2026 - management guided to presenting at a major medical meeting (likely ESMO in September). No recent contract wins or partnerships announced in last 60 days. [Catalyst Type: Corporate/Clinical Impact: HIGH] The FDA granted Fast Track designation in 2024 which remains in effect.

INSTITUTIONAL
Volume dry-up with price holding 2% from pivot suggests quiet accumulation despite no visible insider buying in the last 60 days (baseline for biotech). The 30.9% short interest with 10.3 days-to-cover creates meaningful squeeze potential IF clinical data reads positively - however, this also represents substantial skepticism. Float is tight at 30.9M shares; a catalyst-driven breakout could see violent upside. Institutional ownership data unavailable from this feed.

KEY RISK
Thesis invalid on a close below \$30.00 (base low and psychological support), or on any negative clinical data readout from TYRA-300 that shows unexpected toxicity or insufficient efficacy - binary trial risk is the dominant factor. The 30.9% short interest reflects real skepticism about competitive positioning vs erdafitinib.

Tight VCP structure (base_tight 1.47) with price coiling 2% from pivot and confirmed vol dry-up week-over-week, but RS line is NOT at new high (-8.3% vs SPY) and vol_w3 > vol_w1 violates strict stair-step contraction. The 14-day earnings catalyst provides a forcing function, though the real alpha event is TYRA-300 data at ESMO. Strongest disconfirming argument: 30.9% short interest reflects informed skepticism about competitive moat vs J&J's erdafitinib, and binary clinical risk could gap stock 40%+ in either direction - this is a speculation, not an investment. Mixed market regime further tempers conviction. Conviction: Medium.

Stop: \$13.50 (200-day MA and base low; ~10% risk from pivot)

CATALYST INTELLIGENCE
EARNINGS
Aug 13 - Consensus expects Q2 EPS ~\$0.28 on revenue of ~\$210M (+25% YoY). Last 4 quarters show 3 beats, 1 miss (Q4 2025 miss on take-rate compression concerns). Forward P/E of 13.3x on 55% revenue growth is compelling if margins stabilize; key focus will be gross take rate (has been pressured from 4.5% to ~3.8%) and FX headwinds. Management maintained full-year guidance last quarter.
BUSINESS & POSITION
DLocal is the dominant emerging-market payment processor enabling global enterprises (Amazon, Microsoft, Spotify) to accept and disburse payments across 40+ countries in LatAm, Africa, and Asia - a critical 'picks and shovels' infrastructure play on EM digital commerce growth. The company holds category-leader status in its niche with a \$600B+ TPV addressable market growing 15-20% annually as global merchants expand into underbanked regions.
FACTOR & THEME
Pure-play on EM fintech/digital payments theme; sentiment is cautiously recovering after 2022-2024 fintech derating, with recent strength in NU Holdings and MercadoLibre suggesting sector rotation. Cross-border payment volumes correlate with global trade recovery - a macro tailwind if USD weakens. Peer read-through: PAGS and STNE rallied 20%+ on Brazil consumer recovery; DLO's geographic diversification is a differentiator.
NEWS FLOW
Recent news (June 2026): Announced expansion into three new African markets (Kenya, Ghana, Tanzania), extending TAM. No major contract wins disclosed but enterprise customer additions are typically announced on earnings calls. [Catalyst Type: Earnings Impact: HIGH] The Uruguay-based company faces ongoing scrutiny post-2022 short report but subsequent audits cleared concerns - sentiment overhang is fading.
INSTITUTIONAL
One insider buy totaling \$237K in the last 60 days - not a senior officer (cluster score 2), so insufficient for grade upgrade but notable positive signal in a name that rarely sees insider purchases. Vol dry-up at 0.46x today's ratio suggests distribution has ceased and accumulation is quiet. 12.8% short interest with 4.9 days-to-cover creates modest squeeze potential on a beat. 54.9% revenue growth at 13x forward P/E is value-with-growth - under-owned relative to quality.

KEY RISK
Thesis invalid on a close below \$13.50 (200-day MA and base low support confluence), or on a take-rate miss below 3.5% at the Aug 13 print which would signal structural margin pressure. FX volatility in LatAm (BRL, ARS) is an ongoing headwind; customer concentration (top 10 merchants = ~50% of TPV) is a secondary risk.

Solid Stage 2 base with vol dry-up and positive RS (+6.2% vs SPY), but RS line not at new high and base_tight at 2.04 is slightly loose for A-grade consideration. The 14-day earnings catalyst is well-positioned with 3/4 beat history and compelling valuation (13x forward on 55% growth). Insider buy (\$237K) adds conviction but single non-senior purchase doesn't warrant upgrade. Strongest disconfirming argument: take-rate compression trend may be structural rather than transitory - if Q2 shows further margin erosion, multiple could contract despite revenue growth. Mixed macro regime and EM sensitivity warrant caution. Conviction: Medium.

CATALYST INTELLIGENCE

EARNINGS

Jul 29

Strong RS (+24.7%) with earnings just reported (Jul 29), but base_tight of 6.19 is far too loose for quality VCP - price action is volatile, not coiling. Base only 10 days old needs time to tighten. Monitor for base contraction over next 2-3 weeks; no actionable setup today. Conviction: Low.

CNMD — 90D Base Setup | Pivot: \$49.00 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)
