ANALYSIS
CATALYST / TODAY'S DRIVER
UAMY has been a beneficiary of the U.S. government's push to secure domestic supplies of antimony, a critical mineral with defense and flame-retardant applications where China controls ~50% of global supply. However, today's move is -6.1% on volume of only 0.32x average - this is NOT a breakout; the stock is in active distribution 62% below its 52-week high. The forward catalyst path centers on potential inclusion in federal critical-minerals supply-chain programs (DoD/DPA Title III contracts), but no confirmed award exists today.
BUSINESS & POSITION
United States Antimony Corporation is the only significant U.S.-based primary antimony producer, operating smelting and processing facilities in Montana and a mining operation in Mexico. The company also produces zeolite products, but antimony - used in flame retardants, ammunition, solar panels, and semiconductor manufacturing - is its core strategic asset and the reason the ticker attracts speculative interest tied to U.S. critical-minerals policy.
FACTOR & THEME
UAMY sits at the intersection of two themes: domestic critical-minerals security (direct exposure to U.S.-China decoupling and DoD supply-chain hardening) and the broader defense spending cycle. Antimony is on the U.S. Critical Minerals List and has been subject to Chinese export restrictions, which in theory should be a structural tailwind - but UAMY's inability to translate that geopolitical narrative into revenue growth (rev_growth -3.1%) exposes the gap between thematic appeal and operational execution.
BREAKOUT SIGNAL
NO VALID SIGNAL - stock is below 20MA, 50MA, and 200MA, prox_52w is 38.3 (deep in bear territory), and today's volume is 0.32x average. Do NOT treat as a breakout candidate. Watch for: reclaim of 20MA (currently well above price) AND volume expansion above 1.5x average as minimum re-entry conditions.
INSTITUTIONAL
Institutional ownership data shows 56.9% held by institutions across 308 holders, which is a meaningful institutional presence for a \$1.1B micro/small-cap miner - suggesting the name has been on the radar of thematic and critical-minerals-focused funds. However, volume today is severely below average (0.32x), meaning there is NO institutional accumulation occurring on this session; this is a low-activity down day, not a breakout. No insider buying in the last 60 days. The most recent insider buy was Chairman & CEO Gary C. Evans purchasing 100,000 shares at \$6.13 (~\$613K) on September 26, 2025 - now approximately 235 days ago. While that single senior-officer purchase is a modest positive signal (CEO bought near current prices, providing some downside reference), the absence of any follow-on buying in the subsequent eight months and the stock's failure to hold gains above that entry level are concerning.
EARNINGS
EARNINGS IN 87D
EARNINGS CONTEXT
Next earnings date: August 14, 2026 (87 days out). No consensus EPS/revenue estimates are available from this feed for a company at this scale with minimal analyst coverage. Revenue growth is running at -3.1% trailing, and the forward P/E of 22.2x is difficult to justify against a shrinking top line - this is a theme/optionality vehicle, not a compounding-earnings story. The August print will be watched for any DoD contract announcements or volume ramp at the Montana smelter, but it is too distant to be a near-term catalyst.
KEY RISK
Thesis is invalid if UAMY fails to win any DoD/federal critical-mineral supply contract in the next two quarters OR if it closes below the CEO's \$6.13 cost basis on elevated volume, which would signal even the most informed insider's support level has failed; technically, a close below \$6.00 would confirm a full breakdown with no visible support to the \$4-5 range.

UAMY - Analysis (continued)

ANALYSIS

UAMY fails every technical criterion required for inclusion in a breakout scan: it is down 6.1% on the day, trading 62% below its 52-week high, below all three key moving averages (20/50/200MA), with an RS line that is nowhere near a new high, negative 12-week RS vs. SPY (-9.3%), a wide and untightened base (base_tight 4.23 - more than double the VCP threshold), and volume running at less than one-third of average. The strongest disconfirming evidence against any bullish thesis here is the brutal divergence between the compelling geopolitical narrative (U.S. antimony independence, China export restrictions) and the actual financial results: revenue is contracting at -3.1% and the stock has lost 62% from its peak, meaning the market has already priced in significant execution risk and found the story wanting. The CEO's \$613K open-market purchase in September 2025 at \$6.13 is the sole insider signal and provides a modest floor reference, but eight months of subsequent price weakness and zero follow-on buying suggests it has not yet been the catalyst for a turnaround. In the current Mixed/Transitional macro regime with small-cap underperformance (IWM -1.9% vs. SPY, IWM/SPY trend -4.8%), speculative critical-minerals names without revenue inflection face additional headwinds. UAMY is a thematic watch - not a trade - until it rebuilds a base above the 200MA with tightening price action and volume confirmation. Conviction: Low.

Signal: NO VALID SIGNAL - stock is below 20MA, 50MA, and 200MA,
Vol vs Avg: 0.32x

Recent 13D / 13G Filings (last 12 months)

13D = activist stake, board pressure, takeover | 13G = passive 5%+ holder, lower-conviction

No 13D or 13G filings against this company in the last 12 months.

Ownership Interpretation

Smart Money:	Top holders skew 4 passive / 6 active. No high-conviction smart-money names identified.
Concentration:	Top 10 hold 34% - moderate concentration, normal for SMID.
13D/13G:	No 5%+ stake filings in last 12 months. Either nobody's gone over the threshold or the company is too large for 5% to be common (>\$10B caps rarely see 13D/G activity).
Insider Tape:	1 buy / 0 sales over 12 months - mixed picture, watch for cluster patterns.

INSTITUTIONAL FOOTPRINT - PRICE / VOLUME INTELLIGENCE

2 Months Ago	48.5%	Mixed	+13.2%	0.94x	Neutral
Last Month	29.3%	Heavy Distribution	-29.0%	1.10x	BEARISH

Significant Volume Days (Last 90 Days, >2x Average Volume)

Each row = a day institutions left a clear footprint. Absorption = stealth accumulation (silent buy).

Date	Close	Day Chg %	Volume	Rel Vol	Classification	Signal
2026-03-20	\$8.16	-10.4%	29,706,500	2.1x	DISTRIBUTION	Bearish

Volume / Tape Synthesis

- A/D Verdict:

D-rated tape (Distribution). Volume action favors sellers - institutions distributing. Avoid long entries until tape flips.
- Trajectory:

Recent month is heavy distribution - sellers in control. Wait for monthly flow to flip green.
- Vol Footprint:

Last 90d: 1 distribution day(s) at >2x average volume. Net bearish - distribution outpacing accumulation.

TAPE-BASED ACTION: AVOID / TAPE NOT CONSTRUCTIVE
