

Appendix — evidence and methodology

The audit trail for the Equity Research v4 report on HOOD. It is not a summary: it records the event reconciliation, where every figure came from, what was withheld and why, and the formula behind each derived value. Market data as of 2026-07-27T17:11:32+00:00.

1. Event-state reconciliation

Before any rating the report reconciles the ET clock, the earnings calendar, the issuer's filings and the call status into one event state. This run resolved to POST-CALL NOT TRANSCRIPT-VERIFIED and a directional rating was permitted. [OBS]

- Results are out and the call has concluded by the clock (2157h since release, a later ET day), but no transcript feed verifies what was said.
- Guidance did not parse from the earnings exhibit; the forward view is incomplete.

2. Estimates and consensus ledger

Endpoint	Coverage
price_target	absent
recommendation	absent
eps_estimate	absent
rev_estimate	absent
surprises	absent

3. Valuation method

A historical MULTIPLE band and forward bull/base/bear prices are deliberately NOT produced: the first needs a point-in-time historical EPS series and the second needs issuer guidance, neither available on this tier. Dividing the 52-week PRICE range by current EPS — which the prior version did — is circular (the implied prices are just the price range) and has been removed.

4. Source inventory

Source	Note
market	yahoo daily bars (split-adjusted), 499 issuer sessions — UNOFFICIAL feed, no data licence or SLA
benchmark	SPY 61 completed sessions 2026-04-27..2026-07-23, embedded
sec	CIK 0001783879, 1162 filings indexed
rel_volume	withheld: the session is still open, so today's partial volume cannot be compared with completed-session averages
capex	not separately disclosed for the quarter ended 2026-03-31; the cash-flow statement is filed year-to-date only
non_gaap_margin	not available — non-GAAP measures are not XBRL-tagged
earnings_exhibit	AVAILABLE_NOT_INGESTED - the exhibit was fetched but neither the prose KPIs nor the reconciliation table could be read
form4	712 Form 4 filings on record · 81 inside the 180-day analysis window · 91 transactions parsed · 80 open-market sales
stocktwits	ok (30 messages)
reddit	unavailable — Reddit returns HTTP 403 to this client; excluded rather than silently under-counted

news 9 items fetched · 8 records admitted after article-level relevance · 1 rejected

An XBRL reference reads accession · tag · period end; the tag is a us-gaap concept shown with word breaks (remove the spaces to reconstruct the exact tag).

6. Insider transactions (Form 4)

A Form 4 records what an insider did, not why. Sales under a plan adopted earlier, shares surrendered to cover tax on a vest, and a discretionary open-market sale all file the same way, and this report does not read any of them as a view on the stock. [\[OBS\]](#)

Open-market sales	80	view-bearing

7. Institutional filings (Schedule 13D / 13G)

Ownership interpretation unavailable: 23 of 23 could not be attributed to a named filer. No stake size is parsed from any filing body, so the count below is a count of filings and nothing more. [\[OBS\]](#)

8. Options, open interest and implied volatility

unavailable — no options feed is wired into this report; a chain, its open interest and implied volatility are not filed facts and were not sourced.

9. Coverage rejected, with reason
