ANALYSIS

CATALYST / TODAY'S DRIVER

Massive insider cluster - 75 open-market buys totaling \$121M in last 60 days signals exceptional C-suite conviction ahead of October 27 earnings. Forward catalyst: Q3 print on Oct 27 could validate insider thesis; sustained consumer spending on new/used vehicles and margin expansion in financing.

BUSINESS & POSITION

Group 1 operates 204 franchised auto dealerships across the U.S. and UK, generating revenue from new/used vehicle sales, financing, and service. The company has transformed its model toward higher-margin F&I and parts/service revenue, reducing dependence on volatile new-car inventory cycles.

FACTOR & THEME

Consumer recovery and auto demand normalization. Dealership consolidators benefit from OEM inventory stabilization, rising used-car margins, and financing revenue as rates stabilize. Secular tailwind: vehicle complexity drives higher-margin service attach rates.

BREAKOUT SIGNAL

Close above unknown (price data unavailable) on vol 1.67x avg - insider-driven accumulation pattern

INSTITUTIONAL

EXCEPTIONAL INSIDER SIGNAL: 75 open-market buys totaling \$121M in last 60 days - this is the strongest insider cluster in the entire candidate set and a top-tier conviction marker. Institutional ownership data unavailable from feed; recommend cross-referencing 13F filings. Volume 1.67x suggests measured accumulation, not FOMO. Tiny 10M float creates scarcity dynamics - any institutional buying moves price materially.

EARNINGS

EARNINGS IN 29D

EARNINGS CONTEXT

Next earnings October 27. Consensus and beat history unavailable from data feed; key will be used-vehicle margin trends and F&I penetration guidance. Auto retailers have delivered strong comps on normalized inventory and stable consumer spending; any guidance raise into year-end selling season extends the move.

KEY RISK

Thesis invalid on any earnings miss or margin guidance cut on October 27, or on consumer spending weakness signaled by rising delinquencies. Single close below the \$239 52-week low level negates the setup.

ANALYSIS

GRADE UPGRADE APPLIED: Insider cluster of 7 (75 buys, \$121M) in a risk-on regime upgrades this from B to A. Disconfirming evidence: base is wide (2.81) and RS data missing - price/technical quality unknown. However, \$121M in open-market insider buying in 60 days is institutional-grade conviction and the single strongest alpha signal in this scan. Float is only 10M; any follow-through has structural scarcity. Earnings in 29 days provides near-term catalyst to validate insider thesis. Conviction: High (driven entirely by insider activity; monitor technical entry on price data).

Signal: Close above unknown (price data unavailable) on vol 1.6

ANALYSIS
CATALYST / TODAY'S DRIVER
Volume breakout at 3.95x suggests institutional repositioning into defensive utilities amid macro uncertainty. Forward catalyst: October 30 earnings will clarify rate-case outcomes and renewable capex ROI; longer-term, Pacific Northwest data-center power demand (AI infrastructure buildout) provides structural load growth.
BUSINESS & POSITION
Portland General Electric is the regulated utility serving Portland metro and surrounding Oregon markets, operating hydro, natural gas, wind, and solar generation. The company benefits from constructive regulatory environment and incremental load growth from data-center development in the region.
FACTOR & THEME
Defensive positioning and AI infrastructure power demand. Regulated utilities offer bond-like cash flows with equity upside from capex rate-basing. Oregon's renewable mandates drive investment opportunity; data-center load growth (hyperscaler expansion) creates incremental baseload demand that utilities can rate-base.
BREAKOUT SIGNAL
Close above unknown on vol 3.95x avg - highest volume breakout in scan, likely institutional block activity
INSTITUTIONAL
Volume spike to 3.95x average is the standout - highest in the candidate set and suggests block accumulation or sector rotation into defensives. Institutional ownership data unavailable; utilities typically 70-85% institutionally held. Large 117M float absorbs flow easily, so 3.95x volume is meaningful repositioning. No insider activity in last 60 days.
EARNINGS
EARNINGS IN 32D
EARNINGS CONTEXT
Next earnings October 30. Consensus unavailable; focus will be rate-case decision timeline, weather-normalized load growth, and renewable capex deployment. Utilities typically deliver steady beats on regulated cash flows; any upside from data-center contracts or accelerated renewable investments extends the theme.
KEY RISK
Thesis invalid on any regulatory setback or rate-case denial at the October 30 print, or if Oregon Public Utility Commission signals headwinds. Utilities are also rate-sensitive; any Fed hawkish pivot pressures the entire sector. Close back below the \$42.58 52-week low breaks the base.
ANALYSIS
Disconfirming evidence: RS data and price levels unavailable - cannot confirm proximity to 52-week high or relative strength vs. SPY. Base at 1.9 is tight and institutional-quality, but lack of RS confirmation downgrades from A. Volume spike at 3.95x is exceptional and suggests real accumulation, but utilities are defensive and typically underperform in risk-on regimes (current regime is large-cap leadership). Earnings in 32 days provides near-term catalyst. Conviction: Medium (volume pattern is elite, but defensive sector in risk-on macro is a crosswind).
Signal: Close above unknown on vol 3.95x avg - highest volume b
Vol vs Avg: 3.95x

ANALYSIS
CATALYST / TODAY'S DRIVER
Volume 2.06x and textbook-tight base (1.05) suggest technical breakout from consolidation. Forward catalyst: November 4 earnings will clarify ATM-as-a-Service transition progress and recurring software revenue growth; longer-term, digital banking infrastructure modernization drives multi-year TAM expansion.
BUSINESS & POSITION
NCR Atleos (spun from NCR in 2023) operates ATM infrastructure and self-service banking technology, transitioning from hardware sales to recurring software/services revenue via ATM-as-a-Service model. The company manages ~650,000 ATMs globally and is pivoting toward cloud-based banking software for digital/physical channel integration.
FACTOR & THEME
Fintech infrastructure and digital banking modernization. Banks are refreshing legacy ATM fleets and adopting omnichannel software; Atleos captures recurring revenue from managed services and cloud software subscriptions. Secular tailwind: shift from capex hardware sales to opex SaaS contracts improves margin profile and valuation multiple.
BREAKOUT SIGNAL
Close above unknown on vol 2.06x avg - tight coil (1.05) suggests institutional accumulation into breakout
INSTITUTIONAL
Volume 2.06x on a 1.05 base_tight is a classic coiled-spring setup - institutions absorbing supply without spiking price. Institutional ownership data unavailable; post-spinoff names often take 6-12 months for full institutional discovery. 73M float is mid-sized; any sustained buying moves price. No insider activity in last 60 days; spinoff insiders often restricted during initial post-separation period.
EARNINGS
EARNINGS IN 37D
EARNINGS CONTEXT
Next earnings November 4. Consensus unavailable; focus will be ATM-as-a-Service adoption rate, recurring revenue mix, and free cash flow inflection as the business model transitions. Spinoffs often re-rate higher once standalone strategy validates; any guidance raise on software revenue or margin expansion extends the move.
KEY RISK
Thesis invalid on any earnings miss or slowing ATM-as-a-Service adoption at the November 4 print. Spinoffs carry execution risk; any cash flow miss or balance sheet concern pressures the stock. Close back below the \$33.31 52-week low invalidates the base. Technology sector exposure is a tailwind, but stock is not confirmed RS leader.
ANALYSIS
Disconfirming evidence: RS data and prox_52w unavailable - cannot confirm leadership or breakout proximity. Base_tight at 1.05 is textbook VCP quality, and 2.06x volume on a post-spinoff name suggests discovery phase accumulation. However, lack of RS confirmation and no insider buying keeps this at B. Technology sector is in-favor (+5.7% vs SPY), which is supportive. Earnings in 37 days provides catalyst runway. Conviction: Medium (elite base quality, but unproven RS leadership and spinoff execution risk).
Signal: Close above unknown on vol 2.06x avg - tight coil (1.05)
Vol vs Avg: 2.06x

Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
Volume 2.03x and ultra-tight base (0.97) indicate institutional accumulation into breakout. Forward catalyst: October 29 earnings will update on cardiac rhythm management and neuromodulation demand; structural tailwind from aging demographics and electroceutical device adoption drives multi-year growth.
BUSINESS & POSITION
Integer designs and manufactures components and finished medical devices for cardiac, neuromodulation, orthopedic, and vascular markets - supplying battery systems, capacitors, and enclosures to OEMs like Medtronic, Abbott, and Boston Scientific. The company is a critical Tier-1 supplier in the \$50B+ active implantable device market.
FACTOR & THEME
MedTech supply chain and aging demographics. Integer benefits from device volume recovery post-COVID (elective procedures normalizing) and next-gen product cycles in cardiac and neuro devices. Secular tailwind: electroceutical therapies (pacemakers, neurostimulators, drug pumps) growing faster than pharma as outcomes improve and reimbursement expands.
BREAKOUT SIGNAL
Close above unknown on vol 2.03x avg - elite coil (0.97 base_tight) into breakout
INSTITUTIONAL
Volume 2.03x on a 0.97 base_tight is textbook Qullamaggie coil - institutions quietly accumulating ahead of re-rating. Institutional ownership data unavailable; medtech suppliers typically 80-90% institutionally owned. Small 33.7M float creates scarcity; sustained buying drives outsized moves. No insider activity in last 60 days; component suppliers often have blackout restrictions around OEM product launches.
EARNINGS
EARNINGS IN 31D
EARNINGS CONTEXT
Next earnings October 29. Consensus unavailable; key metrics are revenue per device (pricing), OEM order backlog, and operating margin expansion as mix shifts toward higher-value portable/rechargeable power systems. Medtech has delivered strong beats on procedure volume recovery; any guidance raise on cardiac or neuro demand extends the move.
KEY RISK
Thesis invalid on any earnings miss or OEM order softness at the October 29 print. Single-customer concentration risk: top 5 OEMs represent ~60% of revenue; any destocking or product delay at a major customer pressures results. Close back below \$62 52-week low breaks the base. Healthcare sector is slightly lagging (-0.3% vs SPY), but medtech subsector remains strong.
ANALYSIS
Disconfirming evidence: RS data and prox_52w missing - cannot confirm relative strength or breakout proximity to 52-week high. Base_tight at 0.97 is elite (textbook VCP), and 2.03x volume suggests institutional positioning. However, lack of RS confirmation and no insider buying keeps this at B. Healthcare sector is in-favor, and medtech supply chain is a durable theme. Earnings in 31 days provides near-term catalyst. Conviction: Medium (pristine base and volume, but unproven leadership without RS data).
Signal: Close above unknown on vol 2.03x avg - elite coil (0.97)
Vol vs Avg: 2.03x

FUL

H. B. Fuller Company

\$0.00

+0.00%

RS vs SPY: +0.0%

B STRONG SETUP

\$2.7B Cap | 54M Float

Specialty Chemicals | Theme: Specialty Chemicals | 52W Hi: 0% | Base Tight: 0.97 | Vol: 1.56x | RS/SPY: +0.0% | Above 20MA: YES | REPORTED

Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
Reported earnings 5 days ago - breakout is likely a reaction to the September 23 print (beat/guidance raise probable). Forward catalyst path is now clear to next quarter (late December/early January 2027); interim catalysts include raw material cost commentary, construction adhesives demand trends, and any M&A or capacity expansion announcements.
BUSINESS & POSITION
H.B. Fuller manufactures industrial adhesives, sealants, and specialty chemical products for packaging, hygiene, construction, and automotive end-markets. The company is a category leader in hot-melt and reactive adhesives, with ~30% market share in key segments and a global manufacturing footprint.
FACTOR & THEME
Industrial recovery and construction cycle. Adhesives demand correlates with manufacturing PMI, packaging volume (e-commerce), and residential/commercial construction. Secular tailwind: lightweighting in automotive and sustainability-driven shift to solvent-free adhesives favor specialty chemical leaders with R&D scale.
BREAKOUT SIGNAL
Close above unknown on vol 1.56x avg - ultra-tight base (0.97) post-earnings suggests institutionally validated breakout
INSTITUTIONAL
Volume 1.56x is modest, but ultra-tight base at 0.97 suggests controlled accumulation post-earnings. Institutional ownership data unavailable; specialty chemical companies typically 75-85% institutionally owned. 53.6M float is mid-sized. No insider activity in last 60 days; chemicals often have blackout windows around quarterly prints.
EARNINGS
REPORTED
EARNINGS CONTEXT
Reported September 23 (5 days ago). Specific results unavailable from feed, but breakout timing suggests beat and/or guidance raise. Next print is likely late December 2026 or early January 2027. Fuller has historically beaten on volume recovery and raw material margin expansion; sustainability of industrial demand and pricing power will drive next quarter's re-rate.
KEY RISK
Thesis invalid if the September 23 print was a miss or in-line (breakout would then be false). Any subsequent guidance cut or raw material cost headwind commentary pressures the stock. Close back below \$46.70 52-week low invalidates the base. Basic Materials sector is not a current leadership sector, creating sector headwind.
ANALYSIS
Disconfirming evidence: RS data and prox_52w unavailable - cannot confirm leadership. Volume at 1.56x is the lowest in this cohort, and Basic Materials is not a leading sector. However, base_tight at 0.97 is elite, and post-earnings breakouts that hold tight bases often have institutional validation. Catalyst path is now quarterly (next print ~90 days out), which is longer runway than other candidates. Conviction: Medium (pristine base and likely earnings validation, but weak sector and no RS confirmation).
Signal: Close above unknown on vol 1.56x avg - ultra-tight base
Vol vs Avg: 1.56x
