CATALYST INTELLIGENCE	
EARNINGS	
August 05 - Consensus expects ~\$1.25-1.35 EPS on ~\$720M revenue. Company has beaten EPS estimates in 3 of last 4 quarters. Guidance was maintained last quarter with management citing strong backlog in Engineered Structures. Forward PE of 28.6x reflects infrastructure premium; 57.8% earnings growth trajectory supports multiple. Catalyst Impact: Earnings (High) - binary event in 2 days with stock at pivot.	
BUSINESS & POSITION	
Arcosa manufactures infrastructure-related products across three segments: Construction Products (aggregates, specialty materials), Engineered Structures (utility structures, wind towers, storage tanks), and Transportation Products (barges, rail components). The company holds strong regional positions in aggregates and is a leading domestic wind tower manufacturer benefiting from onshoring trends.	
FACTOR & THEME	
Direct exposure to US infrastructure spending (IJA tailwinds), energy transition (wind tower manufacturing), and reshoring of critical supply chains. Sentiment in infrastructure/reshoring themes remains constructive with bipartisan support, though wind tower demand is lumpy based on project timing.	
NEWS FLOW	
No major contract announcements in last 60 days. Company continues to benefit from DOE loan guarantee for Montana Renewables (Calumet JV exposure via specialty materials). Wind tower backlog remains robust per Q1 commentary. Russell reconstitution completed in June with no material change to ACA positioning.	
INSTITUTIONAL	
Volume dry-up from 816K 684K 621K represents textbook institutional accumulation pattern - price holding within 1.2% of highs while volume contracts 24%. No insider activity in last 60 days (baseline). Institutional ownership data unavailable from this feed. Low short interest (2.4%, <1 day to cover) suggests no crowded short thesis to unwind.	
KEY RISK	
Thesis invalid on a close below \$140.50 (base low) or on earnings miss/guidance cut at the August 5 print. Key bear case: wind tower demand is project-dependent and could face delays if utility customers defer capex; aggregates pricing power may soften if construction activity slows.	

Textbook VCP structure: base_tight 1.17, confirmed vol contraction across all 3 weeks, price within 0.5% of pivot. Earnings catalyst in 2 days provides the trigger event. Infrastructure/reshoring theme has tailwind. Bear case: binary earnings risk with stock at highs creates unfavorable risk/reward if positioning into print - thesis works best on post-earnings gap-and-go if results confirm. RS line not at new high is minor blemish. Conviction: Medium (earnings binary dampens confidence despite pristine structure).

CATALYST INTELLIGENCE
EARNINGS
August 05 - Consensus expects ~\$2.00 EPS on ~\$250M revenue. Forward PE of 12.7x (vs 23.3x trailing) reflects Street expecting significant earnings acceleration from Amundi synergies. Beat history is mixed - asset managers are highly correlated to market levels. Catalyst Impact: Earnings (High) - Amundi integration update critical.
BUSINESS & POSITION
Victory Capital is a diversified asset manager with \$176B+ AUM across multiple boutique investment franchises including USAA mutual funds (acquired 2019) and Amundi US (acquired 2024). The company operates a multi-boutique model providing equity, fixed income, and solutions strategies to retail and institutional clients.
FACTOR & THEME
Levered to equity market appreciation (AUM-based revenue), rising retail investor engagement, and potential M&A consolidation in asset management. Financials sector is 2nd-leading sector (+2.4% 20d). 76.7% revenue growth reflects Amundi integration - organic growth more modest.
NEWS FLOW
Completed Amundi US acquisition in early 2024, adding ~\$100B AUM. No material 13D filings or activist activity. Stock has outperformed peers (BEN, IVZ, TROW) significantly, suggesting market is pricing in successful integration. No insider activity in last 60 days.
INSTITUTIONAL
RS line at 52-week high with 27.7% outperformance vs SPY signals institutional sponsorship. Volume dry-up confirmed (481K 440K 402K). However, base_tight at 5.34 is loose - this is a momentum name, not a coiled spring. Vol_ratio_today at 1.51 (elevated) suggests some pre-earnings positioning already occurring.

KEY RISK

Thesis invalid on close below \$95.00 (10-week moving average area) or on AUM outflows/integration stumbles at August 5 print. Key bear case: asset management is a secularly challenged industry with fee compression; Victory's outperformance may already price in Amundi success, leaving limited upside surprise.

RS line at new high is a strong signal, and vol dry-up is confirmed, but base_tight at 5.34 is well above the 2.0 threshold for A-grade consideration - this is an extended momentum name rather than a tight consolidation. Financials sector leadership provides tailwind. Earnings in 2 days is high-impact catalyst. Bear case: stock already up 82% from 52-week low; incremental buyers may be limited with consensus targets at \$96 (below current price). Conviction: Medium (momentum is real but structure is loose and valuation reflects success).

Stop: \$29.50 (base low, 7% risk)

CATALYST INTELLIGENCE
EARNINGS
August 06 - Consensus expects ~\$0.42 EPS on ~\$570M revenue. As a recent spin-off (2024), limited beat/miss history exists. Forward PE of 18.8x reasonable for healthcare services. 13.7% revenue growth is solid. High debt/equity (467%) from spin structure is key focus. Catalyst Impact: Earnings (Medium) - early innings establishing track record.
BUSINESS & POSITION
Concentra operates the largest occupational health network in the US with 500+ centers providing workers' compensation injury care, employer health services, and consumer urgent care. Spun off from Select Medical in 2024, the company benefits from employer demand to manage healthcare costs and return-to-work programs.
FACTOR & THEME
Defensive healthcare services with counter-cyclical elements (workplace injuries occur regardless of economy). However, Healthcare sector is lagging (-1.3% 20d), creating headwind. Employer cost management theme has secular support but limited momentum catalyst.
NEWS FLOW
Recent spin-off from Select Medical creates limited news history. No major contract wins or regulatory events in last 60 days. Company is building standalone public company track record. No insider activity reported (common for recent spins with lockup considerations).
INSTITUTIONAL
Volume contraction from 859K 843K 625K is constructive. RS at +34.4% shows strong relative performance despite Healthcare sector weakness. However, as a recent spin, institutional ownership may still be adjusting (forced sellers from index funds that don't hold spin-offs). No insider buying signal.
KEY RISK
Thesis invalid on close below \$29.50 (base low) or on earnings disappointment at August 6 print. Key bear case: high leverage (467% D/E) creates balance sheet risk if growth disappoints; Healthcare sector underperformance (-1.3%) creates relative headwind for new money flows.

Strong RS (+34.4%) and confirmed vol dry-up despite sector headwind suggests real accumulation. Base_tight at 2.68 is acceptable. However, RS line not at new high, recent spin-off status creates uncertainty around institutional positioning, and Healthcare is lagging sector. Earnings in 3 days provides catalyst but limited history makes outcome less predictable. Bear case: leverage is concerning and sector rotation away from Healthcare could cap upside. Conviction: Low-Medium (structure is decent but sector headwind and leverage concern warrant caution).

CATALYST INTELLIGENCE
EARNINGS
August 12 - Consensus expects ~\$1.55 EPS on ~\$640M revenue. Company has beaten estimates in 3 of last 4 quarters. Management raised full-year guidance last quarter citing strong wholesale sell-through. Forward PE of 13.3x is attractive for branded apparel with 50%+ ROE. Catalyst Impact: Earnings (Medium-High) - 9 days out, allowing base to tighten further.
BUSINESS & POSITION
Kontoor Brands owns Wrangler and Lee denim brands, operating as a pure-play jeanswear company spun from VF Corporation in 2019. The company holds #1 and #2 positions in US jeanswear with strong wholesale relationships (Walmart, Target, Amazon) and growing DTC presence.
FACTOR & THEME
Consumer Discretionary is 3rd-leading sector (+0.7% 20d), providing modest tailwind. 45% revenue growth and 116% earnings growth reflect easy comps and operational improvements. Brand strength in value-oriented denim positions well if consumer remains cautious but spending.
NEWS FLOW
No major announcements in last 60 days. Wholesale channel checks suggest stable inventory levels at major retailers. No activist involvement or 13D filings. 12.9% short interest (5.8 days to cover) creates potential squeeze fuel if earnings exceed expectations. No insider buying in last 60 days.
INSTITUTIONAL
Volume contraction from 800K 571K 486K (39% contraction) is the strongest dry-up in this candidate set - classic quiet accumulation. Base_tight at 1.71 is excellent. Short interest at 12.9% with 5.8 days to cover creates asymmetric squeeze potential on positive catalyst. Institutional ownership data unavailable.

KEY RISK
Thesis invalid on close below \$80.00 (base low and 50-day MA confluence) or on guidance cut at August 12 print. Key bear case: apparel is highly competitive with private label pressure; elevated short interest (12.9%) suggests informed skepticism about sustainability of growth rates.

Strongest volume contraction in the set (39%) with tight base (1.71) - structural quality is high. Consumer Discretionary sector tailwind present. Elevated short interest (12.9%) creates squeeze potential. However, pivot is 5.1% away (not imminent), RS line not at new high, and 9 days to earnings means setup needs more time to develop. Bear case: short sellers at 12.9% see something - potentially margin pressure or channel inventory concerns. Conviction: Medium (excellent structure but needs catalyst trigger and RS confirmation).

CATALYST INTELLIGENCE
EARNINGS
August 06 - As pre-revenue biotech, EPS/revenue are not meaningful metrics. Focus is on clinical trial updates and cash runway. Valuation reflects growth-stage premium; P/E inapplicable. Current cash position should fund operations through key data readouts. Catalyst Impact: Earnings (Medium) - pipeline update more important than financials.
BUSINESS & POSITION
Immunovant is a clinical-stage biotech developing FcRn inhibitors for autoimmune diseases. Lead candidate batoclimab (anti-FcRn antibody) is in late-stage trials for myasthenia gravis, thyroid eye disease, and CIDP. The company competes with argenx (Vyvgart) in the FcRn space.
FACTOR & THEME
Biotech cycle sentiment is mixed - XBI has underperformed broader market. FcRn inhibitors are validated mechanism (argenx Vyvgart success) but IMVT is clinical-stage with binary pipeline risk. 19.6% short interest reflects skepticism on competitive positioning vs argenx.
NEWS FLOW
No major clinical data releases in last 60 days. Company presented at medical conferences in Q2 with incremental data. Key upcoming catalysts include Phase 3 readouts in myasthenia gravis and thyroid eye disease (timing TBD). FDA PDUFA dates not yet established. No insider buying in last 60 days.
INSTITUTIONAL
19.6% short interest with 11.2 days to cover is extremely elevated - this is a battleground stock. Volume dry-up is only partial (vol_dryup_strict is false). RS at +32.5% shows believers accumulating despite short thesis. Binary risk profile makes this a conviction play, not a technical setup.
KEY RISK
Thesis invalid on close below \$35.00 (recent support) or on negative clinical data readout. Key bear case: argenx has first-mover advantage with Vyvgart; IMVT's differentiation may be insufficient to capture meaningful market share, and 19.6% short interest suggests smart money skepticism on competitive positioning.

Tight base (1.73) with strong RS (+32.5%) despite Healthcare sector weakness shows real accumulation. However, vol_dryup_strict is false, pivot is 7.1% away, RS line not at new high, and 19.6% short interest signals significant informed skepticism. This is a binary biotech - position sizing must reflect pipeline risk, not technical structure. Bear case: argenx competitive moat is substantial; short sellers may be right about IMVT's ability to differentiate. Conviction: Low (technical setup is secondary to clinical catalyst binary).

Stop: \$78.00 (50-day MA support)

CATALYST INTELLIGENCE

EARNINGS

August 05 - Consensus expects ~\$1.10 EPS on ~\$320M revenue. Forward PE of 17.8x (vs 42.1x trailing) reflects expected margin expansion. 14.3% revenue growth driven by VNS Therapy adoption. Company has met or beaten estimates in recent quarters. Catalyst Impact: Earnings (High) - 2 days out, binary event at pivot.

BUSINESS & POSITION

LivaNova develops neuromodulation and cardiac surgery devices. VNS Therapy (vagus nerve stimulation) for epilepsy and treatment-resistant depression is the key growth driver. Cardiopulmonary segment provides oxygenators and heart-lung machines. Strong RS despite Healthcare sector weakness signals product-specific momentum.

FACTOR & THEME

Medical devices benefit from procedure volume recovery and aging demographics. Mental health/neuromodulation is emerging theme with limited pure-play exposure. Healthcare sector lagging (-1.3%) is headwind, but LIVN's RS (+33.8%) demonstrates idiosyncratic strength.

NEWS FLOW

No major FDA approvals or product launches in last 60 days. VNS Therapy continues steady adoption for treatment-resistant depression indication. No activist involvement. 8.6% short interest with 5.4 days to cover is moderate - some skepticism but not a crowded short. No insider buying in last 60 days.

INSTITUTIONAL

Vol dry-up is marginal (only 3.9% contraction, vol_dryup_strict is false). However, RS at +33.8% vs SPY demonstrates real institutional accumulation despite sector headwind. Base_tight at 2.4 is acceptable. The strong RS divergence from Healthcare sector is the key institutional signal here.

KEY RISK

Thesis invalid on close below \$78.00 (50-day MA area) or on earnings miss/guidance cut at August 5 print. Key bear case: neuromodulation market is niche with limited TAM expansion; cardiac surgery segment faces competition from transcatheter alternatives.

Strong RS (+33.8%) diverging from weak Healthcare sector is compelling institutional signal. Earnings in 2 days provides catalyst. However, vol_dryup_strict is false (only 3.9% contraction), RS line not at new high, and base_tight at 2.4 is borderline. Analyst target at \$84.80 (essentially current price) suggests limited consensus upside - setup needs earnings beat to unlock higher targets. Bear case: TAM concerns in neuromodulation are real. Conviction: Medium (RS divergence is strong but vol structure and analyst targets are concerns).

CATALYST INTELLIGENCE
EARNINGS
September 22 - Consensus expects ~\$1.65 EPS on ~\$700M revenue for fiscal Q1. Company has beaten estimates consistently. 23% revenue growth and 32% earnings growth reflect aftermarket strength. Forward PE of 21.9x is reasonable for aerospace services growth. Catalyst Impact: Earnings (High) but 50 days away - too distant.
BUSINESS & POSITION
AAR Corp provides aviation services including MRO (maintenance, repair, overhaul), parts supply, and integrated solutions to commercial and government customers. The company benefits from aging aircraft fleets requiring more maintenance and parts distribution demand as airlines defer new aircraft purchases.
FACTOR & THEME
Aerospace aftermarket is a secular growth theme as global fleet ages and OEM delivery delays extend aircraft service lives. Defense exposure provides stability. However, earnings catalyst is 50 days out - setup lacks imminent trigger.
NEWS FLOW
No major contract wins in last 60 days. Company benefits from ongoing Boeing/Airbus delivery delays extending MRO demand. Government services segment provides steady baseload. No activist involvement or insider buying in last 60 days.
INSTITUTIONAL
Vol pattern is inconsistent (720K spike in W2 breaks clean contraction pattern - vol_dryup_strict is false). RS at +24.8% is solid. Base_tight at 2.49 is acceptable. However, without a catalyst for 50 days, this is a watch not a buy - being early without catalyst is being wrong.
KEY RISK
Thesis invalid on close below \$135.00 (50-day MA area). Key bear case: aerospace aftermarket is cyclical; any airline industry downturn would pressure MRO demand and parts pricing. 50-day catalyst gap means position could languish.

Strong aerospace aftermarket theme with solid fundamentals (23% rev growth, 32% earn growth). RS at +24.8% confirms institutional interest. However, vol_dryup_strict is false (W2 spike breaks pattern), RS line not at new high, and critical issue: earnings catalyst is 50 days out. A VCP coil with no identifiable forward catalyst is a watch, not a buy. Setup is technically sound but needs catalyst development. Bear case: without imminent trigger, position could decay or base could fail before catalyst arrives. Conviction: Low (structure is decent but no catalyst = no edge).

CATALYST INTELLIGENCE

EARNINGS

August 06

Vol dry-up confirmed but base_tight at 3.27 is loose, RS line not at new high, Healthcare sector lagging, and forward PE of 518x suggests Street expects sharp earnings decline (EPS from \$7.87 TTM to \$0.43 forward) - this anomaly needs clarification before committing capital. Low float (12.7M) creates volatility. Early-stage setup requiring more base tightening. Conviction: Low.

CATALYST INTELLIGENCE

EARNINGS

August 06

Vol dry-up is marginal (only 8.5% contraction), base_tight at 3.48 is loose, RS line not at new high, and earnings growth is negative (-10.3%). Smart home theme lacks momentum catalyst. Setup is technically within parameters but lacks the tight coil and RS confirmation of higher-grade setups. Earnings in 3 days creates binary risk without structural conviction. Conviction: Low.

CATALYST INTELLIGENCE
August 13

Vol dry-up confirmed (32.9% contraction) but RS is modest (+10.8%), RS line not at new high, extreme leverage (2473% D/E), and earnings growth is negative (-35.8%). P/B of 75.8x reflects Sphere asset valuation complexity. The Sphere creates optionality but also significant execution risk. Catalyst 10 days out. Early setup requiring RS improvement and base tightening. Conviction: Low.

EARNINGS

October 15

At 52-week high (99.5% prox) with confirmed vol dry-up, but base_tight at 3.35 is loose, RS is weak (+8.3%), RS line not at new high, and TTM EPS is negative (-\$2.75). Financials sector is leading (+2.4%) but this regional bank is underperforming sector peers. Earnings 73 days away - no catalyst. Early setup requiring fundamental clarification on earnings turnaround. Conviction: Low.

EARNINGS

August 07

Energy sector is leading (+7.6%) but CLMT has structural issues: base_tight at 4.27 is very loose, pivot is 6.7% away, RS line not at new high, TTM EPS negative (-\$2.16), and negative book value (P/B -3.5x). Montana Renewables project creates optionality but execution risk is high. Vol dry-up confirmed but base needs significant tightening. Earnings in 4 days is catalyst but fundamentals are too messy for conviction. Conviction: Low.
