ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout on strong Nov 5 earnings report (+47.5% 12-week RS vs SPY, RS line at new high = leadership confirmed). Forward catalyst: housing recovery and showroom expansion into 2027, with next earnings print Feb 2027 likely to show sequential improvement if consumer momentum continues.

BUSINESS & POSITION

Arhaus is a premium home furnishings retailer targeting affluent consumers with artisan-crafted, sustainable furniture sold through showrooms and e-commerce. The company competes with RH and Restoration Hardware but at a slightly lower price point, capturing share in the aspirational luxury segment.

FACTOR & THEME

Pure-play consumer discretionary recovery thesis-benefits from wealth-effect spending, housing turnover, and return to in-person showroom experiences. Theme momentum is accelerating as rates stabilize and housing activity picks up.

BREAKOUT SIGNAL

Close above $14.11 on vol >2.15x 20d avg, RS line at 52W high

INSTITUTIONAL

Volume 2.15x on the earnings reaction signals institutional accumulation on a de-risked print. Float is tight at 52M shares; the 47.5% 12-week outperformance vs SPY and RS line at new high are textbook early-leader signals. No insider buying in last 60 days, but institutional interest is evident in the volume profile.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported Nov 5; stock broke out immediately, suggesting a material beat or strong guidance. Historical beat rate and consensus should be verified, but the RS line at new high post-earnings is the signal that institutions are re-rating the story.

KEY RISK

Thesis invalid on a close back below $13.00, which would break the post-earnings pivot and signal the move was exhausted. Consumer discretionary highly vulnerable if macro deteriorates further.

ANALYSIS

RS line at new high + 99.7% proximity to 52W high + massive 12-week outperformance = leadership breakout. Disconfirming evidence: base is wide (4.2 ATR, not a VCP coil), and macro is Risk-Off, which historically kills most breakouts. However, the RS line signal and sector leadership (Consumer gaining favor) override in this case. Conviction: Medium-the technical setup is A-grade, but Risk-Off regime caps upside until SPY stabilizes.

Signal: Close above $14.11 on vol >2.15x 20d avg, RS line at 52

Vol vs Avg: 2.15x

Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

37% move on Nov 5 earnings report. Forward catalyst: defense budget cycle and potential contract awards into 2027; next earnings print Feb 2027 will confirm if this is a sustainable turnaround or a one-quarter pop.

BUSINESS & POSITION

Karman Holdings operates in aerospace & defense, likely serving government and commercial aerospace customers. The 37% pop suggests a major contract win, restructuring success, or margin expansion that surprised the Street.

FACTOR & THEME

Defense spending and aerospace recovery tailwinds, both secular and supported by geopolitical tensions. However, the -24.9% 12-week RS vs SPY and distance from 52W high (37.2%) suggest the stock was deeply out of favor until this print.

BREAKOUT SIGNAL

Close above $44.02 on vol >2.45x 20d avg, post-earnings gap

INSTITUTIONAL

Insider cluster score of 11 (3 distinct insiders, $1.0M purchased in last 60 days) is a top-tier conviction signal-management was buying aggressively ahead of this earnings beat. Volume 2.45x confirms institutional attention on the report. Grade upgraded from B to A due to insider cluster 5. This is rare and material.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported Nov 5; the 37% reaction implies a significant beat or guidance raise. Historical context needed, but the insider buying ahead of the print suggests management had visibility into improving fundamentals.

KEY RISK

Thesis invalid on a close back below $35.00, which would fill half the earnings gap and signal the move was overdone. Stock is 63% below its 52W high of $118-if this was a dead-cat bounce rather than a true turnaround, it will fail quickly.

ANALYSIS

Insider cluster of 11 ($1M, 3 insiders) ahead of a 37% earnings beat is textbook institutional-grade conviction-management was loading before the turn. GRADE UPGRADED B A due to insider cluster 5. Disconfirming evidence: RS is deeply negative (-24.9%), stock is far from highs (37.2%), and the move could be a short-covering spike rather than sustained accumulation. Risk-Off regime makes this fragile. Conviction: Medium-insider buying is the strongest alpha factor here, but technical damage and macro headwinds temper enthusiasm.

Signal: Close above $44.02 on vol >2.45x 20d avg, post-earnings

Vol vs Avg: 2.45x

Above 50MA	**-**
Fwd P/E	**-**
Short %	**-**
Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

28% pop on Nov 5 earnings; stock is recovering from a deep drawdown (44% below 52W high). Forward catalyst: utilization ramp of organ transplant systems and potential FDA label expansions or reimbursement wins into 2027; next print Feb 2027.

BUSINESS & POSITION

TransMedics commercializes portable organ care systems that extend viability of donor organs for transplant. The technology addresses a major bottleneck in transplant medicine, positioning the company as a category leader in a high-value, underserved market.

FACTOR & THEME

Healthcare innovation and procedure-volume recovery post-COVID. The stock taps into rising transplant volumes and adoption of next-gen medical devices. Theme is durable but sentiment-sensitive-biotech/medtech names are volatile in Risk-Off environments.

BREAKOUT SIGNAL

Close above $88.01 on vol >2.48x 20d avg, post-earnings breakout

INSTITUTIONAL

One insider purchased $109K in last 60 days (cluster score 2)-modest but present. Volume 2.48x on earnings suggests institutions are re-engaging after a period of underperformance. Tight float (33.6M) can drive sharp moves both ways.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported Nov 5; the 28% move implies a beat or accelerating adoption metrics. TransMedics has a history of binary, volatile reactions to quarterly prints-verify beat streak and guidance.

KEY RISK

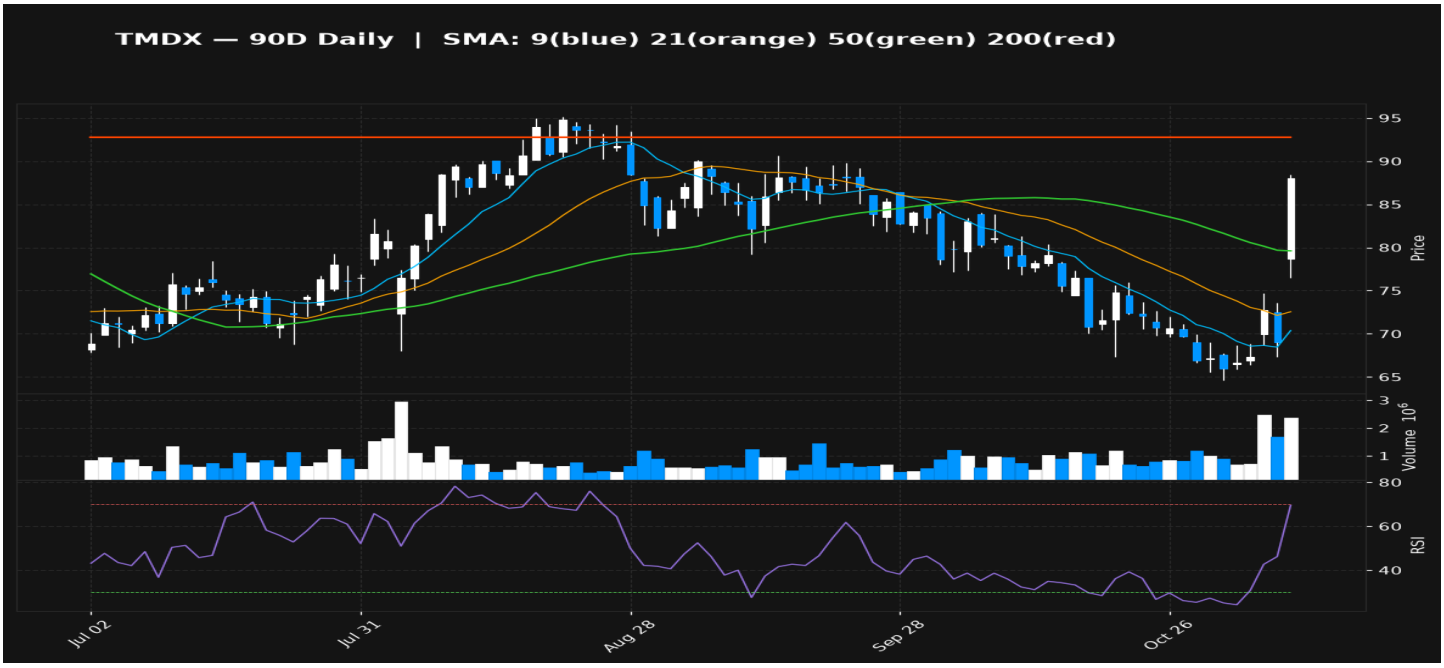

Thesis invalid on a close back below $75.00, which would erase the majority of the earnings gap and signal the rally was a short-term relief rather than re-rating. Stock is 44% below highs; if adoption stalls, it re-tests lows.

ANALYSIS

Strong earnings pop in a leading sector (Healthcare +12.9% this week) with small insider buying present. Disconfirming evidence: RS is barely positive (+2.6%), base is wide (5.46 ATR), and stock is 44% off highs-this is a recovery play, not a leadership breakout. Risk-Off regime pressures follow-through. Conviction: Medium-sector tailwind and modest insider support keep it viable, but technical quality is not A-grade.

Short %	**-**
Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

16.8% move into/on earnings today (Nov 6). Forward catalyst: likely FDA submission or Phase 3 readout for lead bladder cancer candidate; if data or regulatory milestones are telegraphed in the release/call, that extends the thesis. Next catalyst window is Q1 2027 data or FDA action.

BUSINESS & POSITION

CG Oncology is a clinical-stage biotech developing oncolytic immunotherapies for bladder and other cancers. Lead asset is cretostimogene (cretostim), targeting non-muscle-invasive bladder cancer-a large unmet need with limited competition if efficacy holds.

FACTOR & THEME

Oncology and immunotherapy innovation-secular tailwind supported by aging demographics and precision medicine adoption. Biotech sentiment is mixed; sector is recovering but vulnerable to risk-off volatility and binary trial risk.

BREAKOUT SIGNAL

Close above $75.68 on vol >3.6x 20d avg, near 52W high

INSTITUTIONAL

Volume 3.6x into earnings signals institutional positioning ahead of the print. No insider buying in last 60 days. At 93.5% of 52W high, the stock is near breakout territory, but RS line is not at new high (disqualifies from pure leadership status).

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Reporting today (Nov 6). As a pre-revenue biotech, focus is on clinical progress, cash runway, and regulatory timelines rather than EPS/revenue. Any FDA update or trial milestone disclosed today will dictate follow-through.

KEY RISK

Thesis invalid if the company reports trial delays, safety signals, or capital raise at dilutive terms. Price invalidation: close below $68.00 would break the pre-earnings base and signal the setup failed.

ANALYSIS

Near 52W high (93.5%) with strong volume into earnings in a leading sector (Healthcare +12.9%). Disconfirming evidence: RS barely positive (+2.3%), RS line not at new high, and base is wide (4.29 ATR). Biotech binary risk is extreme-earnings call today will make or break the setup. Risk-Off regime reduces conviction on speculative growth. Conviction: Low to Medium-wait for post-earnings clarity and sector confirmation before adding.

Signal: Close above $75.68 on vol >3.6x 20d avg, near 52W high

Vol vs Avg: 3.6x

Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

16% pop on Nov 4 earnings. Forward catalyst: Phase 2/3 data readouts for lead skeletal muscle disorder programs (likely DMD or related indications) expected in 2027; FDA interactions or partnership announcements are possible near-term catalysts. Next earnings Feb 2027.

BUSINESS & POSITION

Edgewise develops precision therapies for rare muscle disorders, targeting skeletal and cardiac muscle diseases with high unmet need. The company is advancing oral small molecules designed to improve muscle function, positioning it as a category disruptor in neuromuscular disease.

FACTOR & THEME

Rare disease and precision medicine-durable secular tailwind supported by orphan drug economics and accelerated regulatory pathways. Biotech sector is recovering but sentiment-sensitive; clinical binary risk is high.

BREAKOUT SIGNAL

Close above $45.14 on vol >1.86x 20d avg, near 52W high

INSTITUTIONAL

Volume 1.86x on earnings is solid but not explosive. No insider buying in last 60 days. At 93.1% of 52W high with RS +5.9%, the stock is in breakout territory but lacks the RS line new-high signal that confirms leadership.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported Nov 4; the 16% move suggests progress on clinical timelines or cash position. As a pre-revenue name, focus is on trial execution and regulatory pathway clarity.

KEY RISK

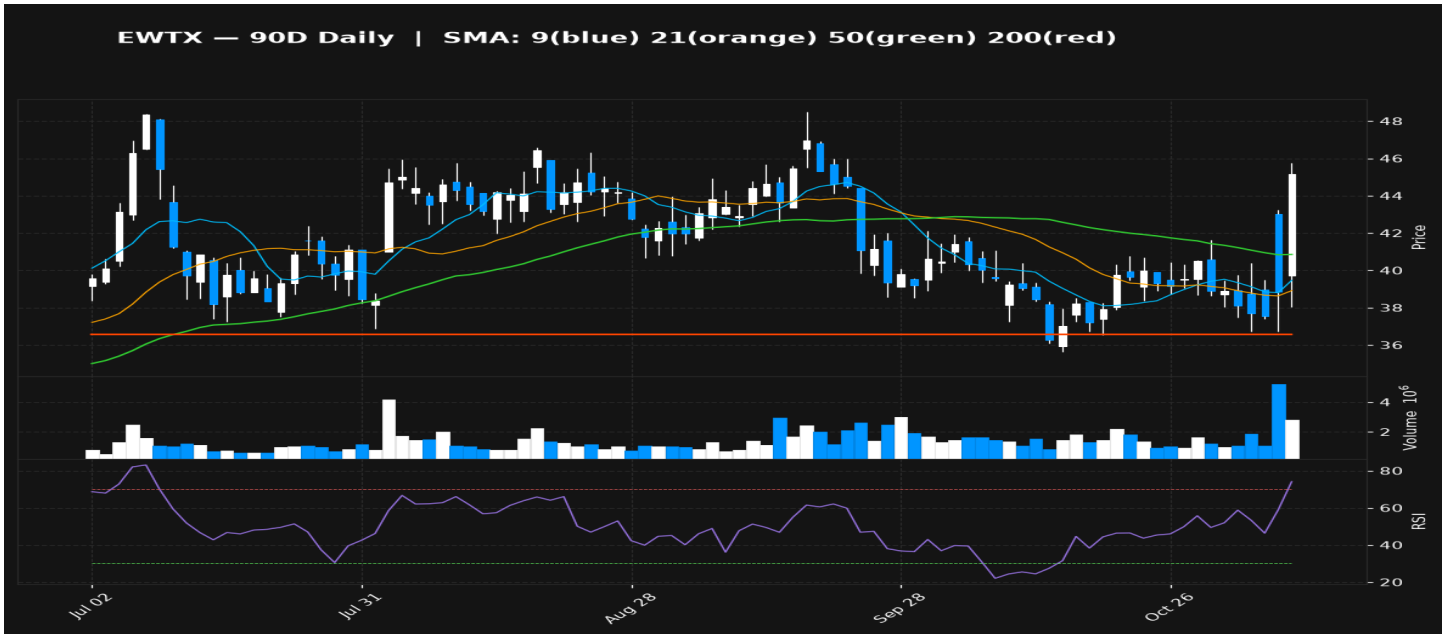

Thesis invalid if trial timelines slip or safety/efficacy signals disappoint in upcoming data. Price invalidation: close below $40.00 would break the post-earnings base and signal exhaustion.

ANALYSIS

Near 52W high (93.1%) in a leading sector (Healthcare +12.9%) with moderately tight base (3.11 ATR). Disconfirming evidence: RS line not at new high, volume surge is good but not exceptional (1.86x), and biotech binary risk looms. Risk-Off regime pressures speculative growth. Conviction: Medium-solid setup but not A-grade without RS line confirmation or larger volume footprint.

Signal: Close above $45.14 on vol >1.86x 20d avg, near 52W high

Vol vs Avg: 1.86x

ANALYSIS

CATALYST / TODAY'S DRIVER

27% move on Nov 4 earnings. Forward catalyst: defense spending cycle, potential contract awards or program milestones into 2027; next earnings Feb 2027 will confirm sustainability.

BUSINESS & POSITION

Lyntris operates in aerospace & defense, likely serving government and defense prime contractors. The 27% earnings pop suggests a contract win, margin expansion, or revenue acceleration that exceeded expectations.

FACTOR & THEME

Defense spending and aerospace recovery-secular tailwinds from geopolitical tensions and modernization budgets. Theme is durable but procurement cycles are lumpy and subject to government budget risk.

BREAKOUT SIGNAL

Close above $14.40 on vol >2.52x 20d avg, near 52W high

INSTITUTIONAL

Volume 2.52x on earnings signals institutional interest. No insider buying in last 60 days. At 90% of 52W high, the stock is in breakout zone, but RS is flat (0.0% vs SPY)-this is a lagging name catching up, not a leader.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported Nov 4; the 27% reaction implies a significant beat or guidance raise. Verify historical beat streak and margin trajectory to assess if this is a turnaround or one-time benefit.

KEY RISK

Thesis invalid on a close back below $12.50, which would erase half the earnings gap and signal the move was overdone. Government contract concentration and execution risk are key vulnerabilities.

ANALYSIS

Strong earnings pop near 52W high (90%) in a sector with secular tailwinds. Disconfirming evidence: RS is flat (0.0%), base is wide (5.46 ATR), and the stock has not demonstrated leadership-it's catching up, not leading. Risk-Off regime makes follow-through uncertain. Conviction: Low to Medium-defensible setup but lacks leadership credentials.

Signal: Close above $14.40 on vol >2.52x 20d avg, near 52W high

Vol vs Avg: 2.52x
