ANALYSIS
CATALYST / TODAY'S DRIVER
Today's 16% surge likely driven by earnings beat or material guidance raise (confirm catalyst via SEC filings/press releases). Forward catalyst: November 5 earnings print (79 days) where management will update on blood center demand recovery and hospital procedural volumes heading into FY end.
BUSINESS & POSITION
Haemonetics provides blood and plasma supply chain solutions, serving blood banks, hospitals, and plasma collection centers globally. The company is a category leader in automated blood collection and hospital blood management systems, with recurring razor/razorblade economics from disposables.
FACTOR & THEME
Healthcare sector momentum (+3.8% vs SPY this week, +6.5% leading sector overall) provides strong tailwind. Taps hospital procedure normalization post-pandemic and ongoing plasma demand from biopharmaceutical manufacturing. Theme momentum is accelerating as elective surgeries and blood donation volumes stabilize.
BREAKOUT SIGNAL
Close above \$104.65 on vol >3.0x of 20d avg
INSTITUTIONAL
Volume at 3.07x average signals institutional participation in today's move. No insider buying in last 90 days is a caution flag-insiders not adding at these levels suggests limited conviction from those closest to operations. Float of 44.9M allows for institutional block buying but also quick reversals. Institutional ownership data not available from this feed; cross-reference with 13F filings to assess hedge fund/growth fund positioning.
EARNINGS
EARNINGS IN 79D
EARNINGS CONTEXT
Next earnings November 5, 2026. Historical beat/miss pattern and consensus EPS/revenue estimates not provided in dataset-critical to obtain before taking position. A serial beater trading near 52W highs typically re-rates higher on each beat; confirm this pattern via earnings surprise history.
KEY RISK
Thesis invalid on a close back below \$95.00 (approximate 10% retracement and likely breach of prior resistance), or if November 5 earnings show blood center demand deterioration or hospital procedure volume miss, signaling structural headwinds in core markets.
ANALYSIS
Strongest disconfirming evidence: RS line NOT at new high despite 98.1 proximity to 52W high-indicates this is not leading the market higher as a new leader should. The 7.09 base_tight reading is far too wide (>2.0 VCP threshold), signaling an explosive one-day event move rather than a controlled institutional accumulation pattern. With no RS confirmation, zero insider buying, and 79 days until next catalyst in a Risk-On but Large-Cap Leadership regime, this is a gap-and-trap candidate unless confirmed by multiple follow-through days above \$105. The healthcare sector tailwind is real, but SMID breakouts face crosswinds when mega caps lead. Wait for base to tighten and RS line to confirm before upgrading. Conviction: Low.
Signal: Close above \$104.65 on vol >3.0x of 20d avg
Vol vs Avg: 3.07x
