| Analysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Catalyst / Today's Driver</b><br>Current driver is the sector-wide Energy rally (+7.6% vs SPY this week), likely driven by crude supply concerns or refining margin expansion. Forward catalyst: Nov 6 earnings print (67 days out) where refining margin strength and inventory gains could drive a re-rating; potential for Q4 guidance raise if crack spreads remain elevated into shoulder season.                                                                                                                                                                                                                                                              |
| <b>Business &amp; Position</b><br>Delek operates integrated downstream energy assets including refining, logistics, and retail fuel distribution across the South and Southwest U.S. The company benefits from regional refining complexity advantages and vertically integrated margin capture during periods of elevated crack spreads.                                                                                                                                                                                                                                                                                                                              |
| <b>Factor &amp; Theme</b><br>Captures the Energy sector leadership tailwind (+7.6% vs SPY this week), the strongest macro theme in current market regime. Refining stocks are leveraged plays on crude-to-product spreads and geopolitical supply disruptions; momentum is accelerating as crude volatility persists and inventories tighten heading into fall demand.                                                                                                                                                                                                                                                                                                 |
| <b>Breakout Signal</b><br>Close above \$74.34 on vol >79% above 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Institutional</b><br>Volume surge to 1.79x on a +5.8% gap suggests institutional participation in the Energy rotation, though the base_tight of 2.54 indicates this is a momentum thrust rather than a coiled VCP setup. The 61% 12-week outperformance vs SPY signals strong relative strength, but lack of RS line new high means this is catch-up strength, not leadership. Institutional ownership data unavailable; recommend cross-check with 13F filings.                                                                                                                                                                                                    |
| <b>Earnings</b><br>Earnings in 67D                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Earnings Context</b><br>Next earnings Nov 6. Consensus and beat history not provided, but refining stocks typically trade on sequential margin trajectory and inventory valuation-watch for crack spread commentary and Q4 capex/buyback guidance as key drivers.                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Key Risk</b><br>Thesis invalidated on a close back below \$68.70 (recent consolidation low), or on any crack spread compression signaled by peer guidance cuts or inventory build data ahead of the Nov 6 print. Single-quarter margin volatility can reverse 50%+ of a refining stock move.                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Analysis</b><br>Strongest disconfirming evidence: RS line NOT at new high despite 98.8% proximity to 52W high-this is a laggard catching up to sector strength, not a true leader. Base_tight at 2.54 is loose (nearly double the VCP threshold), signaling volatile accumulation rather than institutional absorption. The +5.8% gap on modest 1.79x volume and absence of a coiled setup downgrades this from A to B. However, the Energy sector tailwind is the single strongest theme in the current regime, and the 61% 12-week RS is undeniable. This is a momentum follow-through play into the Nov 6 catalyst, not a textbook breakout. Conviction: Medium. |
| <b>Signal: Close above \$74.34 on vol &gt;79% above 20d avg</b><br><b>Vol vs Avg: 1.79x</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
