| Analysis                                                                                                                                                                                                                                                                                                                               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Catalyst / Today's Driver</b><br>Volume surge (2.02x) on defensive rotation into rate-sensitive asset managers as utilities rally. Forward catalyst: November 5 earnings print, where sustainable infrastructure deployment updates and portfolio yield expansion could drive re-rating in lower-rate environment.                  |
| <b>Business &amp; Position</b><br>HASI provides debt and equity capital to the sustainable infrastructure market, focusing on behind-the-meter distributed energy, grid-connected projects, and energy efficiency. The firm benefits structurally from energy transition mandates and improving project economics as rates stabilize.  |
| <b>Factor &amp; Theme</b><br>Direct energy transition and climate infrastructure play. With baseload utilities rallying (NJR, BKH, POR all showing volume surges), HASI captures the financing layer of grid modernization and distributed generation buildout-a secular tailwind accelerating under IRA tax credit deployment.        |
| <b>Breakout Signal</b><br>Volume breakout above 2.0x average on tight 1.17 base, above 20MA                                                                                                                                                                                                                                            |
| <b>Institutional</b><br>Volume spike to 2.02x on tight 1.17 base suggests institutional accumulation ahead of earnings. No insider buying in last 90 days. Float of 125.6M allows for institutional block activity without disrupting price-classic setup for quiet positioning before a catalyst.                                     |
| <b>Earnings</b><br>EARNINGS IN 41D                                                                                                                                                                                                                                                                                                     |
| <b>Earnings Context</b><br>November 5 earnings. Consensus data unavailable; watch for portfolio yield, deployment pace, and any guidance on IRA-linked project pipelines. Asset managers in this space have re-rated on each beat as the infrastructure theme gains traction.                                                          |
| <b>Key Risk</b><br>Thesis invalid if stock closes below the 20MA or if November 5 guidance shows deployment slowdown or credit deterioration in the portfolio. Rate volatility remains a structural risk to valuation multiples.                                                                                                       |
| <b>Analysis</b><br>Textbook tight base (1.17) and volume surge into a clear thematic tailwind, but lack of RS data, proximity to 52W high, and rs_line_new_high confirmation downgrades from A. Strongest disconfirming evidence: operating in a mixed/transitional regime where rate-sensitive names can whipsaw. Conviction: Medium. |
| Signal: Volume breakout above 2.0x average on tight 1.17 base,<br>Vol vs Avg: 2.02x                                                                                                                                                                                                                                                    |

ANALYSIS

CATALYST / TODAY'S DRIVER

2.07x volume surge on sector rotation into defensive regulated utilities. Forward catalyst: October 28 earnings, where rate case outcomes, load growth from data center/industrial demand, and CapEx guidance for grid hardening could drive upside surprise.

BUSINESS & POSITION

NorthWestern provides electricity and natural gas to Montana, South Dakota, Nebraska, and Yellowstone National Park. Regulated utility model with visible earnings and rate-base growth driven by infrastructure investment and favorable regulatory frameworks.

FACTOR & THEME

Energy transition infrastructure and grid modernization. Utilities are seeing renewed investment as AI data centers and electrification drive load growth; NWE's captive service territories and constructive regulatory environment position it well for multi-year rate-base compounding.

BREAKOUT SIGNAL

Close with 2.07x volume on 1.39 base, above 20MA but still below 50MA

INSTITUTIONAL

Volume spike to 2.07x on a very tight 1.39 base signals institutional accumulation. Small 61.1M float allows for controlled positioning. No insider buying in last 90 days, but regulated utilities rarely see material insider activity given predictable compensation structures.

EARNINGS

EARNINGS IN 33D

EARNINGS CONTEXT

October 28 earnings. Consensus unavailable; focus on regulatory lag, authorized ROE, and CapEx deployment pace. Utilities have delivered consistent beats as rate cases catch up to elevated investment.

KEY RISK

Thesis invalid on close below the 20MA or if October 28 earnings show regulatory headwinds or weaker-than-expected load growth. Utilities are rate-sensitive; a spike in long-end yields would pressure multiples.

ANALYSIS

Tightest base in the utility cohort (1.39) with strong volume confirmation, but lack of RS metrics and below-50MA status prevent A-grade. Disconfirming: sector is defensive, not leadership; this is rotation, not breakout momentum. Conviction: Medium.

Signal: Close with 2.07x volume on 1.39 base, above 20MA but st

Vol vs Avg: 2.07x

ANALYSIS

CATALYST / TODAY'S DRIVER

1.53x volume on extremely tight 1.1 base, suggesting coiled setup. Forward catalyst: October 29 earnings, where enrollment trends, margin expansion from online/hybrid models, and any M&A or partnership announcements could drive re-rating.

BUSINESS & POSITION

Covista provides education and training services, likely in corporate or vocational segments. The tight base and small float (33.1M) create potential for explosive moves on positive catalysts, though sector is not among current leadership themes.

FACTOR & THEME

Consumer services recovery and corporate training spend. If tied to reskilling for AI/automation or healthcare workforce development, there's a secular tailwind; otherwise, exposure is more cyclical and consensus-driven.

BREAKOUT SIGNAL

Coiled base (1.1 tight) on 1.53x volume, above 20MA

INSTITUTIONAL

Tightest base in the entire scan (1.1 ATR range over 10 days) on 1.53x volume indicates potential silent-build or institutional absorption. Small 33.1M float amplifies volatility; any material buying creates supply imbalance. No insider activity.

EARNINGS

EARNINGS IN 34D

EARNINGS CONTEXT

October 29 earnings. Consensus unavailable. Education services names can surprise on enrollment beats or margin leverage; watch for guidance on contract wins or digital platform adoption.

KEY RISK

Thesis invalid on close below the 20MA or if October 29 print disappoints on enrollment/revenue growth. Consumer Defensive sector is not in current leadership; this is a tactical setup, not a thematic leader.

ANALYSIS

Textbook VCP coil (1.1 base\_tight) with small float creates asymmetric setup, but lack of RS confirmation, sector leadership, and below-50MA status limit conviction. Disconfirming: no identifiable thematic tailwind or catalyst beyond earnings. Conviction: Low-Medium.

Signal: Coiled base (1.1 tight) on 1.53x volume, above 20MA

Vol vs Avg: 1.53x

| SETUP METRICS |              |

| Inst. Own     | - (data lag) |

ANALYSIS

CATALYST / TODAY'S DRIVER

2.02x volume on tight 1.52 base as defensive rotation lifts regulated gas utilities. Forward catalyst: November 4 earnings, where weather-normalized margin, rate case updates, and CapEx guidance for system integrity and renewable integration could drive upside.

BUSINESS & POSITION

Black Hills provides electric and natural gas utility service across eight states in the Mountain and Plains regions. Regulated utility model with visible earnings from rate-base growth and constructive regulatory frameworks in its service territories.

FACTOR & THEME

Energy infrastructure and natural gas as bridge fuel in energy transition. Utilities with balanced electric/gas exposure benefit from electrification trends while maintaining base-load reliability. IRA tailwinds support renewable CapEx and rate-base growth.

BREAKOUT SIGNAL

2.02x volume breakout on 1.52 tight base, above 20MA

INSTITUTIONAL

Volume surge to 2.02x on textbook-tight 1.52 base indicates institutional interest. No insider buying in last 90 days. Defensive positioning into a mixed regime; utilities are institutional havens when growth equities stall.

EARNINGS

EARNINGS IN 40D

EARNINGS CONTEXT

November 4 earnings. Consensus unavailable. Regulated utilities typically deliver narrow ranges; focus on authorized ROE trends, CapEx deployment, and any regulatory lag resolution. Sector has seen consistent beats as rate cases close.

KEY RISK

Thesis invalid on close below 20MA or if November 4 earnings show regulatory pushback or weaker load growth. Rate sensitivity is a structural headwind if long-end yields spike; mixed regime reduces follow-through odds.

ANALYSIS

Strong technical (tight base, volume surge) but sector is defensive rotation, not leadership. Lack of RS data and below-50MA status prevent upgrade. Disconfirming: mixed regime historically sees defensive rallies fade. Conviction: Medium.

Signal: 2.02x volume breakout on 1.52 tight base, above 20MA

Vol vs Avg: 2.02x
