ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings volume surge (6.0x avg) suggests institutional reaction to the September 28 print; forward catalyst is the December quarter guidance and any contract wins tied to rising defense budgets and commercial MRO recovery.

BUSINESS & POSITION

AAR provides aftermarket parts, repair services, and engineering support for commercial and defense aviation. The company benefits from aging commercial fleets requiring more maintenance and elevated defense spending on fleet readiness.

FACTOR & THEME

Defense spending tailwind (DoD modernization, readiness budgets) and commercial aviation aftermarket recovery as global flight hours normalize. Both themes are mid-cycle accelerators with durable multi-year runways.

BREAKOUT SIGNAL

Post-earnings close with volume >6.0x 20d avg

INSTITUTIONAL

Volume spike to 6.0x average on post-earnings day is the hallmark of institutional block activity, not retail. Float of 38.4M provides liquidity for funds but tight enough for follow-through. No recent insider buying is a neutral; institutional ownership data unavailable from feed but likely elevated given the sector and cap size.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported September 28; volume surge suggests beat or raise. Next print likely late December/early January 2027. AAR historically trades on guidance and backlog commentary; check for defense contract bookings and MRO segment margins.

KEY RISK

Thesis invalid if price reverses below the post-earnings breakout pivot (unable to specify without price data) or if next guidance disappoints on defense budget delays or commercial slowdown.

ANALYSIS

Explosive post-earnings volume (6.0x) and tight base (1.81 ATR) signal institutional accumulation, but lack of price/RS data and no RS line new high prevent A-grade. Disconfirming: already reported, so immediate catalyst is spent; rs_line_new_high = false means not leading the market yet. Sector tailwind (defense) is strong, but mixed macro regime caps conviction. Conviction: Medium.

Signal: Post-earnings close with volume >6.0x 20d avg

Vol vs Avg: 6.04x

ANALYSIS
CATALYST / TODAY'S DRIVER
Volume spike (3.5x) into textbook-tight VCP coil (1.27 ATR); forward catalyst is October 30 earnings where any M&A advisory or underwriting beat on a reviving IPO/deal market would re-rate the stock. Financials sector strength supports setup.
BUSINESS & POSITION
Piper Sandler is a mid-market investment bank specializing in M&A advisory, equity underwriting, and institutional brokerage. Revenue is highly geared to capital markets activity, which is recovering from the 2022-23 freeze.
FACTOR & THEME
Capital markets normalization (IPO window reopening, M&A volume recovering from multi-year lows) and small-cap/mid-cap equity issuance tailwind. Theme is early-stage accelerating if rates stabilize and risk appetite returns.
BREAKOUT SIGNAL
Close above coil breakout on volume >3.4x 20d avg
INSTITUTIONAL
Volume surge to 3.5x on a base-tight 1.27 coil is classic pre-earnings institutional positioning. Float of 64.9M allows block accumulation without spiking price. No insider buying in last 60 days; institutional ownership data not available from feed but typically 70%+ for mid-cap financials.
EARNINGS
EARNINGS IN 31D
EARNINGS CONTEXT
Next print October 30; consensus unavailable but check for M&A advisory fees and equity underwriting revenue vs. depressed 2023-24 comps. Piper is levered to small-cap equity issuance, which bottomed in 2023; any beat with positive commentary on deal pipeline is re-rate fuel.
KEY RISK
Thesis invalid on a close back below the coil base (price unknown) or if October 30 print misses on weak M&A/underwriting activity, signaling the capital markets recovery is stalling.
ANALYSIS
Textbook VCP coil (1.27 ATR) with explosive volume (3.5x) ahead of October 30 earnings is institutional pre-positioning; sector tailwind (Financials strength) adds +0.5 quality. Disconfirming: rs_line_new_high = false, so not yet a market leader, and mixed macro regime means capital markets recovery is unconfirmed. Without price/RS data, grade capped at B. Conviction: Medium.
Signal: Close above coil breakout on volume >3.4x 20d avg
Vol vs Avg: 3.48x

Inst. Own	- (data lag)

ANALYSIS

CATALYST / TODAY'S DRIVER

Extremely tight coil (1.01 ATR, textbook VCP) with volume 2.0x average suggests institutions quietly absorbing float ahead of November 4 earnings; any guidance raise on self-service banking tech or ATM-as-a-service recurring revenue would extend the move.

BUSINESS & POSITION

NCR Atleos (spun from NCR in 2023) operates ATM networks, self-service banking infrastructure, and payments processing. The company is transitioning to a software/services model with recurring revenue from ATM-as-a-service and digital banking kiosks.

FACTOR & THEME

Fintech infrastructure and recurring-revenue SaaS transition. Theme is niche but durable; banks are outsourcing ATM operations to cut capex, and digital kiosk adoption is rising. Technology sector leadership is a tailwind.

BREAKOUT SIGNAL

Close above coil breakout on volume >1.9x 20d avg

INSTITUTIONAL

Base-tight 1.01 ATR is elite (top decile VCP quality); volume 2.0x on such a tight range is classic silent institutional accumulation. Float of 73.4M provides liquidity. No insider buying in 60 days; institutional ownership data unavailable but likely elevated post-spinoff as NCR holders were distributed shares.

EARNINGS

EARNINGS IN 36D

EARNINGS CONTEXT

Next print November 4; look for ATM-as-a-service ARR growth, margin expansion from software mix shift, and guidance. Any beat with raised outlook on recurring revenue inflection would confirm the transformation thesis.

KEY RISK

Thesis invalid on a close below the 1.01 ATR coil base (price unknown) or if November 4 guidance disappoints on slower ATM fleet conversion to subscription model.

ANALYSIS

Elite VCP coil (1.01 ATR) with 2.0x volume is textbook Qullamaggie setup, and Technology sector leadership adds quality. Disconfirming: rs_line_new_high = false and no price/RS data to confirm breakout proximity to 52W high; mixed macro regime means even clean coils face headwinds. Would be A-grade in risk-on regime with full data. Conviction: Medium.

Signal: Close above coil breakout on volume >1.9x 20d avg

Vol vs Avg: 1.96x

Short %	-
Days to Cover	-
Inst. Own	-(data lag)

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings move (reported September 23) with elite coil (0.99 ATR) and volume 1.9x suggests beat/raise; forward catalyst is December quarter guidance and any commentary on adhesive demand recovery in construction/packaging end markets.

BUSINESS & POSITION

H.B. Fuller manufactures industrial adhesives for packaging, construction, hygiene, and electronics. The company benefits from secular trends in e-commerce packaging demand and construction activity.

FACTOR & THEME

E-commerce packaging growth (adhesives for corrugated boxes, flexible packaging) and construction rebound (residential/commercial adhesives). Theme is mid-cycle; packaging is stable, construction is early recovery if rates stabilize.

BREAKOUT SIGNAL

Post-earnings close with volume >1.8x 20d avg

INSTITUTIONAL

Textbook 0.99 ATR coil is top-tier VCP quality; 1.9x volume post-earnings is institutional reaction to the print. Float 53.6M is tradable. No insider buying in 60 days; institutional ownership data not available but specialty chemicals typically have 80%+ institutional ownership.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported September 23; volume surge suggests beat or guidance raise. Next print likely late December 2026/early January 2027. Check for organic volume growth and margin expansion as raw material costs normalize.

KEY RISK

Thesis invalid if price closes back into the 0.99 ATR coil base (price unknown) or if next guidance disappoints on construction slowdown or packaging demand weakness.

ANALYSIS

Elite coil (0.99 ATR, near-perfect compression) with post-earnings volume is institutional-quality, but already reported so immediate catalyst spent. Disconfirming: rs_line_new_high = false, no price/RS data, and no clear forward catalyst until December guidance. Mixed macro and lack of sector tailwind (Basic Materials not leading) cap conviction. Conviction: Medium.

Signal: Post-earnings close with volume >1.8x 20d avg

Vol vs Avg: 1.86x
