Analysis
Catalyst / Today's Driver Strong momentum into October 28 earnings driven by continued foodservice volume recovery and restaurant spending normalization. Forward catalyst: Q3 print in 57 days is the key re-rating opportunity; company is positioned to beat on both top-line (volume) and margin expansion from operational leverage.
Business & Position Leading specialty food distributor serving high-end independent restaurants, hotels, and culinary institutions across North America and Europe. Differentiated by curated product selection (artisanal, imported, organic) and white-glove service model that commands premium pricing in a category benefiting from sustained dining-out normalization post-pandemic.
Factor & Theme Consumer recovery theme with focus on experiential spending and restaurant renaissance. Benefits from resilient high-end consumer spending, menu price normalization, and operating leverage as volumes return to pre-COVID baselines without proportional cost increases.
Breakout Signal Close above \$115.52 on vol >177% of 20d avg
Institutional Volume 1.77x average with tight float (37M) suggests institutional positioning ahead of earnings. No recent insider activity in last 60 days. RS vs SPY of +47.5 over 12 weeks is top-decile performance, indicating sustained fund accumulation; stock has re-rated from \$53 to \$115 YTD, yet remains in tight range near highs.
Earnings Earnings in 57D
Earnings Context October 28 earnings in 57 days. Company has demonstrated consistent top-line beats driven by volume recovery and share gains; margins expanding as fixed-cost base leverages higher throughput. Consensus expects continued double-digit revenue growth with improving EBITDA margins.
Key Risk Thesis invalid on close below \$108 (20-day MA and prior consolidation support), or any guidance commentary suggesting peak restaurant spending or volume deceleration at the October 28 print.
Analysis Strongest RS in the screen (+47.5) with a durable forward catalyst (earnings in 57d) and secular tailwind (foodservice normalization). Disconfirming evidence: RS line not at new high despite prox_52w at 98.2 suggests prior leadership peak may have passed; base is slightly wide (2.27 vs ideal <2.0) and mixed macro creates earnings-miss risk. Volume is elevated but not explosive (1.77x vs ideal >2x for A-grade). Clear B-grade: strong momentum into a known catalyst, but technical setup lacks the institutional confirmation signal (RS new high) required for A. Conviction: Medium.
Signal: Close above \$115.52 on vol >177% of 20d avg Vol vs Avg: 1.77x

Analysis
Catalyst / Today's Driver
Breakout to 52-week high driven by Energy sector leadership (+14.1% vs SPY this week) and specialty chemicals margin recovery. Forward catalyst: November 6 earnings (66 days) will test whether margin expansion from refining/specialty products is sustainable; any guidance raise on Montana or specialty lubricants could extend the move.
Business & Position
Specialty petroleum products refiner producing high-margin synthetic lubricants, solvents, waxes, and fuels from two U.S. refineries. Differentiated by specialty product mix (60%+ of revenue) with exposure to both energy recovery (base oils, diesel) and industrial chemicals demand.
Factor & Theme
Dual exposure: Energy sector momentum (benefiting from crude spreads and refining margin recovery) and Materials sector strength (specialty chemicals pricing power). Company is levered to both upstream energy recovery and downstream industrial demand normalization.
Breakout Signal
Close above \$51.52 on vol >164% of 20d avg
Institutional
Volume 1.64x average with stock literally at 52-week high (prox_52w 99.9) signals breakout conviction. No insider activity in last 60 days. RS +41.4 ranks second in this screen, but the move from \$16 to \$51 YTD (3.2x) raises extension risk; late-stage momentum can persist in strong sectors, but incremental-buyer fuel may be exhausted.
Earnings
Earnings in 66D
Earnings Context
November 6 earnings in 66 days. Calumet has historically volatile prints due to refining margin sensitivity; consensus will focus on specialty product volumes and guidance for FY27 margin sustainability. Recent quarters have shown improving specialty segment mix and debt paydown progress.
Key Risk
Thesis invalid on close below \$47.50 (gap-fill level from recent breakout), or on any crude spread compression / specialty product margin guidance cut at the November 6 print. Stock has tripled YTD; a single quarter miss could trigger 20%+ drawdown.
Analysis
At literal 52W high (99.9) with second-strongest RS (+41.4) and riding dual Energy/Materials sector leadership. Disconfirming evidence: base_tight at 2.42 is wider than ideal, RS line not at new high despite price at new high (divergence suggests prior leaders rotating out), and the 3.2x YTD move raises exhaustion risk. Volume is elevated but not institutional (1.64x). Mixed macro + extended valuation from \$16 base = reduced follow-through probability. Solid B: strong sector tailwind into earnings catalyst, but technical quality and risk/reward asymmetry are compromised by extension. Conviction: Medium.
Signal: Close above \$51.52 on vol >164% of 20d avg
Vol vs Avg: 1.64x

ANALYSIS

CATALYST / TODAY'S DRIVER

Surge on Energy sector leadership (+14.1% this week) and offshore drilling activity acceleration. Forward catalyst: November 9 earnings in 69 days will reveal dayrate trends and utilization for OSV fleet; any commentary on multi-year offshore contract wins (Guyana, Brazil deepwater) or fleet monetization extends the thesis.

BUSINESS & POSITION

World's largest owner/operator of offshore support vessels (OSVs), providing marine support to offshore energy exploration and production globally. Beneficiary of multi-year offshore drilling upcycle as oil majors commit capital to deepwater projects with 5-10 year paybacks, driving sustained OSV demand and dayrate pricing power.

FACTOR & THEME

Energy infrastructure and offshore drilling recovery theme. Levered to offshore E&P capex, which is accelerating as onshore shale matures and majors pivot to large-scale deepwater developments (Brazil pre-salt, Guyana, GoM). Dayrates inflecting after decade of oversupply.

BREAKOUT SIGNAL

Close above \$96.11 on vol >155% of 20d avg

INSTITUTIONAL

Volume 1.55x average; stock near 52W high (97.4) but base is borderline tight (2.04). No insider activity last 60 days. RS +27.0 is strong but not top-tier; the sector beta (Energy +14%) is doing heavy lifting here. Float of 46M provides liquidity for funds but limits squeeze potential.

EARNINGS

EARNINGS IN 69D

EARNINGS CONTEXT

November 9 earnings in 69 days. Tidewater has beaten revenue estimates in recent quarters driven by utilization improvement and dayrate normalization; consensus watches for fleet utilization >80% and commentary on long-term contract coverage as leading indicators of margin sustainability.

KEY RISK

Thesis invalid on close below \$90 (breakdown of August consolidation base), or on any offshore capex guidance cuts or utilization declines at the November 9 print. Offshore services stocks are high-beta to crude; oil price breakdown below \$70 WTI would compress the multiple.

ANALYSIS

Strong RS (+27.0) riding Energy sector leadership with a structural offshore recovery thesis and earnings catalyst in 69 days. Disconfirming evidence: RS line not at new high, base_tight at 2.04 is just at the threshold (not textbook <2), and volume at 1.55x is barely above filter (1.5x). The move is sector-driven (Energy +14%) more than company-specific; if sector momentum fades, stock has limited standalone catalyst until earnings. Mixed macro reduces follow-through odds for commodity-levered names. Clear B: decent setup into earnings, but lacks institutional confirmation and technical crispness for A. Conviction: Medium.

Signal: Close above \$96.11 on vol >155% of 20d avg

Vol vs Avg: 1.55x

HP

Helmerich & Payne, Inc.

\$46.21

+6.03%

RS vs SPY: +16.8%

ANALYSIS
CATALYST / TODAY'S DRIVER
6% surge driven by Energy sector leadership and land drilling activity acceleration. Forward catalyst: November 16 earnings in 76 days will update rig utilization, dayrates, and FY27 capex guidance; any commentary on super-spec rig demand from Permian operators or international contract wins (Middle East, Latin America) extends the move.
BUSINESS & POSITION
Leading U.S. land driller with the largest fleet of high-spec (super-spec) rigs optimized for unconventional shale drilling. Competitive moat from FlexRig technology and digital drilling automation; benefits from U.S. shale production growth and tightening super-spec rig market driving dayrate pricing power.
FACTOR & THEME
Energy capex recovery and U.S. shale production normalization. Levered to E&P spending on horizontal drilling (Permian, Eagle Ford, Bakken); super-spec rigs command premium dayrates as operators prioritize efficiency and well economics over incremental rigs.
BREAKOUT SIGNAL
Close above \$46.21 on vol >157% of 20d avg
INSTITUTIONAL
Volume 1.57x average with 6% single-day surge and stock at 99.3% of 52W high signals breakout attempt. No insider activity last 60 days. Large float (96M) suggests this is liquid institutional name but limits squeeze dynamics. RS +16.8 is positive but trails peers (TDW +27, CLMT +41); the sector is lifting all boats, but HP is not leading the Energy cohort.
EARNINGS
EARNINGS IN 76D
EARNINGS CONTEXT
November 16 earnings in 76 days. H&P has historically beaten EPS on operational execution and cost discipline; consensus watches rig count (currently ~200 active FlexRigs), utilization trends, and commentary on multi-year contracts as indicators of cycle durability.
KEY RISK
Thesis invalid on close below \$42.50 (20-day MA and prior consolidation breakout level), or on any rig count / utilization guidance cuts at November 16 print. Land drilling is highly cyclical; crude price weakness or E&P capex cuts would compress dayrates and utilization quickly.
ANALYSIS
At 52W high (99.3) with 6% surge riding Energy sector leadership and land drilling recovery theme; earnings in 76d provides forward catalyst. Disconfirming evidence: RS +16.8 is the weakest among Energy peers in this screen, base is wide (2.98, worst in the B-tier cohort), RS line not at new high, and volume at 1.57x is barely above threshold. The 6% single-day move on sector beta (not company news) creates extension risk; stock may consolidate before earnings. Mixed macro + commodity sensitivity + wide base = reduced edge. B-grade: sector momentum into catalyst, but technical setup is flawed and relative strength lags peers. Conviction: Medium-Low.
Signal: Close above \$46.21 on vol >157% of 20d avg
Vol vs Avg: 1.57x
