ANALYSIS
CATALYST / TODAY'S DRIVER
Current move driven by proximity to 52-week highs and strong sector momentum (+8.9% Healthcare leadership this week). Forward catalyst path: potential clinical data readouts for AL101 (EGFR mutant NSCLC) or IM-1021 (ROR1+ cancers) ahead of November 5 earnings, plus industry conference presentations (ESMO, ASH) that could catalyze data-driven re-rating in Q3/Q4 2026.
BUSINESS & POSITION
Immunome is a clinical-stage biotech developing targeted cancer therapies using its memory B-cell discovery platform. Lead programs include AL101 (EGFR-mutant non-small cell lung cancer) and IM-1021 (ROR1-positive hematologic malignancies), positioning the company in high-value oncology indications with significant unmet need.
FACTOR & THEME
Taps into accelerating oncology biotech theme, particularly precision medicine and targeted therapies. Healthcare sector is leading the market (+8.9% vs SPY), providing strong sector tailwind. Theme momentum is accelerating as M&A activity and data-driven valuations compress the group.
BREAKOUT SIGNAL
Close above \$29.77 on vol >2.25x of 20d avg
INSTITUTIONAL
Volume at 2.25x average suggests institutional participation, though float is large at 108.7M shares. No insider buying in last 60 days is a notable absence given the sharp move. Stock benefits from sector rotation into Healthcare but lacks the insider conviction signal that would elevate this to top-tier. Institutional ownership data not available from this feed; recommend cross-referencing 13F filings for positioning.
EARNINGS
EARNINGS IN 78D
EARNINGS CONTEXT
Next earnings November 5 (78 days out). As a clinical-stage biotech, consensus EPS/revenue estimates are less relevant than data milestones. Company has not yet commercialized products, so earnings will focus on cash runway and trial progress rather than operational metrics.
KEY RISK
Thesis invalid on a close back below \$27.50 (approximate breakout pivot from recent consolidation), or on negative clinical trial data readout for either AL101 or IM-1021 programs before November earnings. Biotech binary event risk is elevated.
ANALYSIS
Strongest disconfirming evidence: RS line is NOT at new high despite stock being at 99% of 52-week high, suggesting prior leadership has not been reclaimed. Base is wide (3.42 vs textbook <2.0), and zero insider buying raises questions about internal conviction at these levels. However, sector leadership (+8.9% Healthcare), strong relative strength (+34.2 vs SPY), and proximity to breakout (99% of 52W high) on elevated volume (2.25x) justify B-grade. This is a sector-momentum trade, not a high-conviction structural breakout. Conviction: Medium.
Signal: Close above \$29.77 on vol >2.25x of 20d avg
Vol vs Avg: 2.25x
