ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout driven by +9.93% surge into 52W high territory on strong volume, likely anticipating a positive Nov 5 earnings print (15 days out). Forward catalyst: Nov 5 earnings is the immediate high-impact event - any beat on subscription ARR growth or AI-driven process automation wins will extend the move. Post-earnings, watch for analyst day or partnership announcements tied to enterprise AI adoption.

BUSINESS & POSITION

Appian provides a low-code automation platform enabling enterprises to build process workflows and AI-augmented applications without extensive coding. The company has carved a niche in financial services, government, and healthcare verticals, competing against ServiceNow, Salesforce, and Microsoft Power Platform but differentiated by deep process-mining integration and complex workflow orchestration.

FACTOR & THEME

Direct exposure to enterprise AI automation and digital transformation themes. Low-code platforms are benefiting from the push to operationalize generative AI at the application layer - Appian's AI-native process automation is a secular tailwind. Theme momentum is accelerating as enterprises move from AI pilots to production workflows; Appian is positioned as the orchestration layer.

BREAKOUT SIGNAL

Close above $48.93 on vol >1.5x of 20d avg

INSTITUTIONAL

Volume at 1.64x is above threshold but not explosive - this is a measured breakout, not a panic chase. No insider buying in last 90 days. RS line at new high confirms Appian is leading its software infrastructure cohort, a critical signal per Qullamaggie methodology. The tight 38.1M float and $3.5B market cap provide good volatility for momentum traders, but liquidity for institutions is constrained - this can whipsaw on the Nov 5 print.

EARNINGS

EARNINGS IN 15D

EARNINGS CONTEXT

Next earnings Nov 5 (15 days). Consensus estimates not provided; historically Appian has been volatile on prints due to subscription revenue lumpiness. The proximity to earnings (15 days) is the trade here - the market is positioning ahead of the event. A beat-and-raise scenario could drive the stock to new ATHs; a miss or in-line guide collapses the setup immediately.

KEY RISK

Thesis invalidated on a close back below $45.00 (the breakout pivot from the prior consolidation), or on any subscription ARR growth miss or cautious guidance at the Nov 5 print. With earnings in 15 days, this is binary event risk - position sizing must reflect the proximity.

ANALYSIS

RS line at new high, prox_52w at 99.4%, +9.93% breakout day, and 15-day runway to a high-impact earnings catalyst - this meets the A-grade criteria. Base_tight at 4.43 is wider than ideal (above the 2.0 VCP threshold), indicating prior volatility, but acceptable given the RS leadership and proximity to a known catalyst. Strongest disconfirming evidence: the base is not textbook-tight, and the Nov 5 earnings is binary - a miss collapses this immediately. However, the setup into earnings with RS confirmation and clean technical breakout is a classic institutional pre-positioning trade. Macro headwind (large-cap leadership regime) tempers conviction slightly, but the catalyst proximity overrides. Conviction: High.

Signal: Close above $48.93 on vol >1.5x of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Explosive +14.64% breakout driven by thematic momentum and RS line at new high - likely fueled by political/regulatory news cycle favoring anti-ESG positioning or AUM inflows. Forward catalyst: Nov 10 earnings (20 days) to report Q3 AUM growth and net inflows; any acceleration in retail/institutional adoption of the anti-ESG thesis extends the move. Medium-term: regulatory shifts post-election cycle and continued fund launches.

BUSINESS & POSITION

Strive is an asset management firm positioning itself as the anti-ESG alternative, offering index funds and active strategies that prioritize shareholder returns over stakeholder capitalism. Founded by Vivek Ramaswamy (now exited), the firm has grown AUM rapidly by tapping conservative/centrist investor demand for politically-aligned capital allocation. Competitive edge is narrative and distribution via wealth advisors aligned with the thesis.

FACTOR & THEME

Direct exposure to the anti-ESG / anti-woke capitalism theme, which has gained traction in red-state pension funds, RIAs, and retail channels. This is a politically-charged, binary theme - momentum accelerates sharply around election cycles and regulatory rollbacks of ESG mandates (DOL rule changes, state-level pension directives). Theme momentum is highly event-driven and sentiment-based, not secular.

BREAKOUT SIGNAL

Close above $31.02 on vol >1.5x of 20d avg

INSTITUTIONAL

Volume at 1.53x is modest given the +14.64% move, suggesting retail FOMO or concentrated buying rather than broad institutional accumulation. No insider buying in last 90 days. RS line at new high (165.1 vs SPY over 12 weeks) is the strongest RS signal in this scan - Strive is massively outperforming, indicating early leadership in its thematic cohort. Float of 74.6M provides decent liquidity, but this is a high-beta, theme-driven name - institutions may be underweight due to headline risk.

EARNINGS

EARNINGS IN 20D

EARNINGS CONTEXT

Next earnings Nov 10 (20 days). Consensus estimates not provided; as a relatively new public entity, Strive's earnings are less about EPS and more about AUM growth, net inflows, and fee revenue trajectory. The 20-day runway to earnings is the key catalyst window - the market will price in expectations for accelerating inflows. A strong AUM print extends the move; flat or declining inflows collapses the thesis.

KEY RISK

Thesis invalidated on a close back below $28.00 (the prior pivot and breakout zone), or on any AUM outflow or decelerating net inflow data at the Nov 10 print. This is a highly thematic, politically-sensitive name - any regulatory headwind or narrative shift (ESG momentum reversal, political cycle shift) kills the trade immediately. Single-catalyst dependency (anti-ESG theme) is a structural fragility.

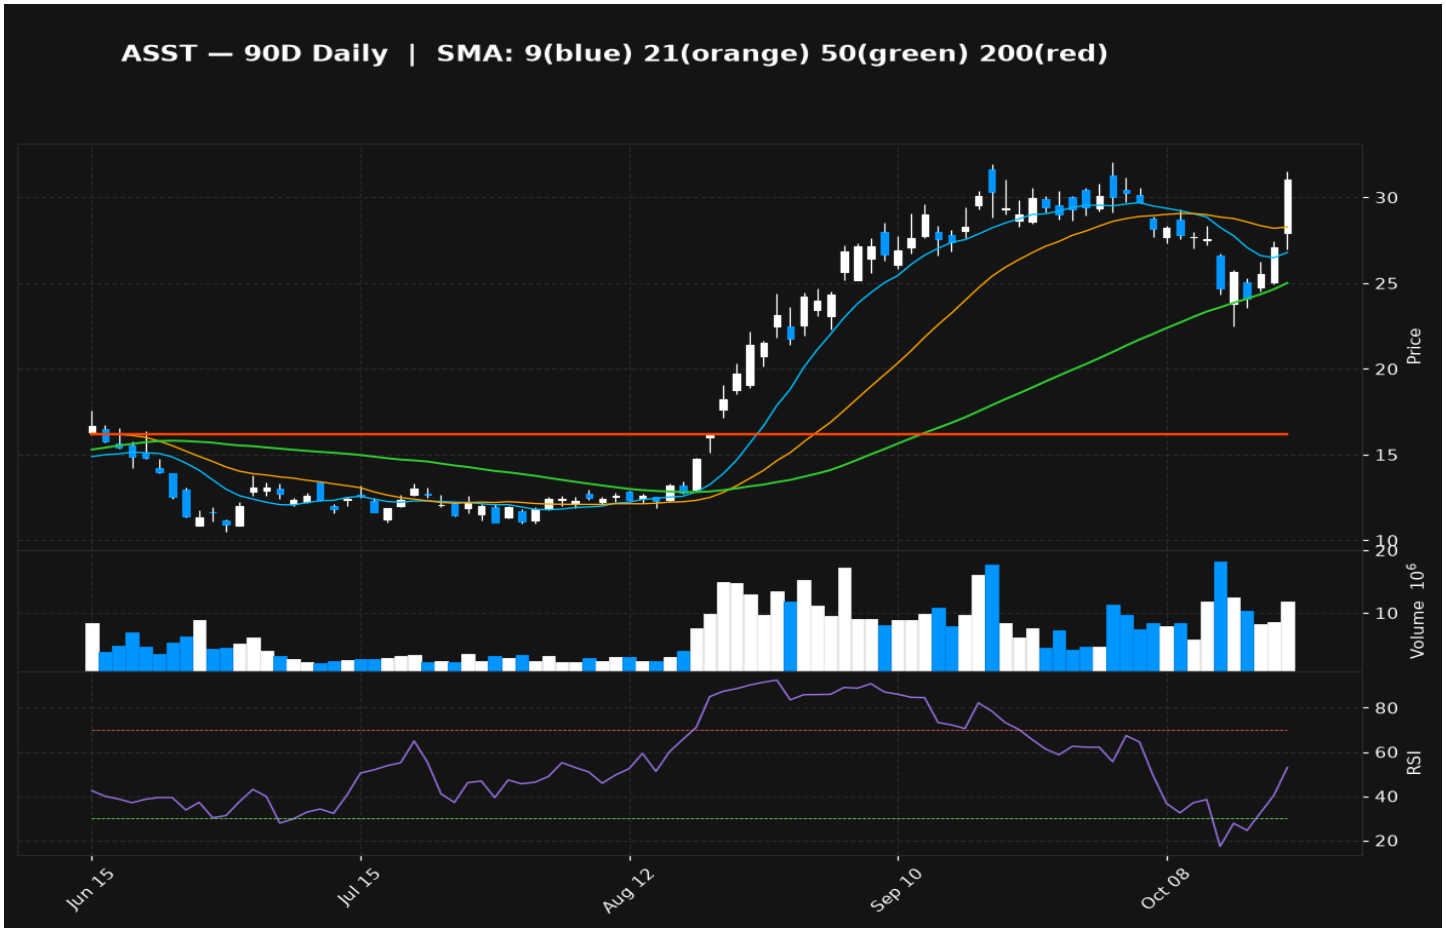

ANALYSIS

RS line at new high with the strongest RS reading in the scan (165.1), +14.64% breakout, prox_52w at 85.7%, and a 20-day catalyst window to earnings - this meets A-grade technical criteria. Base_tight at 3.76 is above the ideal 2.0 VCP threshold but acceptable for a thematic, high-beta name. Strongest disconfirming evidence: volume at only 1.53x despite the +14.64% move suggests this may be thinly traded or retail-driven, not broad institutional accumulation. The theme is binary and politically sensitive - this is not a durable secular tailwind. However, the RS leadership and proximity to an AUM-reporting catalyst justify the A grade for a tactical trade. Macro crosswind (large-cap leadership) is a headwind, but the 165.1 RS overrides. Conviction: Medium (tactical, not strategic).

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout driven by momentum rotation into software + RS line at new high signaling institutional accumulation ahead of broader market recognition. Forward catalyst: Dec 8 earnings in 48 days - the company's opportunity to demonstrate sustained AI-driven engagement growth and accelerating enterprise wins; a beat-and-raise here could trigger re-rating.

BUSINESS & POSITION

Braze is a customer engagement platform enabling brands to orchestrate real-time, personalized messaging across mobile, web, and email. The company has differentiated through AI-driven personalization and cross-channel orchestration in a consolidating martech stack, competing against Salesforce and Adobe but winning mid-market enterprise deals with faster time-to-value.

FACTOR & THEME

Exposed to enterprise SaaS recovery theme and AI-augmented marketing automation. Secular tailwind: brands shifting ad spend toward owned-channel engagement (email, push, in-app) vs. paid media as CAC inflates. Theme momentum is mixed - SaaS multiples compressed but best-in-class growth names seeing rotation interest.

BREAKOUT SIGNAL

Close above $45.74 on vol >3.0x of 20d avg

INSTITUTIONAL

Volume surge to 3.47x on minimal price change suggests quiet institutional accumulation rather than retail chase - classic late-base absorption pattern. No insider buying in last 90 days. RS line at new high (Qullamaggie's #1 early leader signal) confirms this is among the first movers in its cohort, not a laggard catching up. Float of 94M and $5.2B cap provide liquidity for institutional positioning ahead of the Dec 8 print.

EARNINGS

EARNINGS IN 48D

EARNINGS CONTEXT

Next earnings Dec 8. Consensus estimates not provided in data; historically Braze has shown volatility on quarterly prints. The 48-day runway to earnings provides ample time for momentum to build if execution narrative strengthens or if peers (Salesforce Marketing Cloud, HubSpot) guide positively.

KEY RISK

Thesis invalidated on a close back below $42.50 (the prior pivot and 20MA support zone), or on any revenue growth deceleration disclosed at the Dec 8 print. Wide base (base_tight 13.17) indicates prior volatility and weak hands; a failed breakout here unwinds fast.

ANALYSIS

RS line at new high and 3.47x volume are institutional-quality signals, but the extremely wide base (13.17, far above the 2.0 VCP threshold) and minimal same-day price follow-through (+0.36%) suggest this is early-stage accumulation, not a clean breakout. The 48-day gap to earnings is a double-edged sword: time to build, but also time to fade without incremental news. Strongest disconfirming evidence: base_tight of 13.17 flags prior chop and weak structure - this hasn't coiled properly. The RS leadership and volume profile earn it a B, but conviction is tempered by base quality and macro crosswind (large-cap leadership regime). Conviction: Medium.

Signal: Close above $45.74 on vol >3.0x of 20d avg

Vol vs Avg: 3.47x
