ANALYSIS
CATALYST / TODAY'S DRIVER
Textbook VCP compression (base_tight 1.03, the tightest in the entire scan) with volume surge into new-high territory. Forward catalyst: Q3 earnings October 29 in sector rotation toward defensive yield + logistics real estate exposure amid reshoring tailwinds.
BUSINESS & POSITION
LXP is a pure-play industrial REIT focused on single-tenant logistics and distribution facilities, benefiting from e-commerce and supply-chain reshoring demand. The tight float (57M) and ultra-compressed base signal institutional absorption ahead of next earnings cycle.
FACTOR & THEME
Dual exposure to logistics real estate (e-commerce fulfillment, reshoring) and defensive yield in a risk-on environment where capital is rotating into quality income. Industrial REITs are beneficiaries of multi-year warehouse demand, though rate sensitivity remains a factor.
BREAKOUT SIGNAL
Close at \$60.51, within 1.8% of 52W high, on vol 2.08x of 20d avg from a textbook 1.03 ATR coil
INSTITUTIONAL
Volume 2.08x on minimal price change (0.14%) is a classic silent-build signature-institutions absorbing shares without spiking the print. The 1.03 base_tight is textbook coil compression; this is the most technically clean setup in the scan from a volatility-contraction perspective.
EARNINGS
EARNINGS IN 86D
EARNINGS CONTEXT
Next print October 29 (86 days out); consensus and beat history unavailable in feed. Industrial REITs have been benefiting from occupancy and rent growth; LXP's setup suggests positioning ahead of the next catalyst window.
KEY RISK
Thesis invalid on a close below \$58.50 (the base pivot), or on any FFO guidance cut or occupancy decline at the October 29 print. Rate-hike fears or recession signals would pressure valuation multiples.
ANALYSIS
The 1.03 base_tight is the single cleanest VCP compression in the entire scan-this is institutional textbook. The disconfirming evidence: RS line is NOT at new high, which downgrades conviction slightly; the sector (REITs) is not in the top-3 weekly leaders, and the stock moved 0.14% on heavy volume (absorption, not breakout). However, the coil quality, proximity to 52W high (98.2%), and silent-build volume pattern earn the A-grade as a technically pristine setup. The catalyst path (Q3 earnings in 86 days, plus ongoing logistics tailwinds) is durable but not imminent. Conviction: Medium-this is a position ahead of the next leg, not a chase.
Signal: Close at \$60.51, within 1.8% of 52W high, on vol 2.08x

ANALYSIS
CATALYST / TODAY'S DRIVER
Volume explosion (4.98x) into earnings in 2 days (August 6); the market is positioning for a clinical update or partnership announcement. Forward catalyst path: earnings August 6 could deliver EDG-7500 (Becker muscular dystrophy) Phase 2 data or pipeline updates, with potential FDA filing milestones over the next 6-12 months.
BUSINESS & POSITION
Edgewise is a clinical-stage biotech developing EDG-7500 for Becker muscular dystrophy and other rare muscle disorders, targeting a high-unmet-need market. The company's lead asset is in Phase 2, with potential for orphan drug designation and accelerated approval pathways.
FACTOR & THEME
Rare disease / orphan drug development with FDA fast-track potential. Biotech sector remains volatile but this taps into durable institutional appetite for differentiated clinical assets with binary near-term catalysts. Theme momentum is stable in rare disease, though broader biotech has underperformed in 2026.
BREAKOUT SIGNAL
Close at \$43.53 (+13.42%) on vol 4.98x of 20d avg, 2 days ahead of earnings with base_tight 2.0 coil
INSTITUTIONAL
Volume 4.98x (the second-highest in the scan) with a 13.4% move into earnings is classic event-driven positioning-likely hedge funds and biotech specialists front-running a positive data read or partnership leak. The 2.0 base_tight and 89.9 prox_52w suggest a clean technical setup, not just news-driven noise.
EARNINGS
EARNINGS IN 2D
EARNINGS CONTEXT
Next print August 6 (in 2 days). Consensus unavailable in feed; biotech earnings are often used for pipeline updates rather than financials. Historical beat/miss data not applicable for pre-revenue biotech-focus is on clinical milestones and cash runway.
KEY RISK
Binary thesis invalid on any clinical trial delay, safety signal, or lack of partnership news at the August 6 event. Biotech is inherently high-risk; a close below \$38.00 (the base pivot) or any negative trial readout kills the trade. Earnings are in 2 days-this is a pure event bet.
ANALYSIS
The 4.98x volume surge, 2.0 base_tight coil, and 89.9% proximity to 52W high into a 2-day earnings catalyst is a high-conviction event setup. Disconfirming evidence: RS vs SPY is modest at +7.7, RS line is NOT at new high, and this is a binary biotech bet-earnings in 2 days means the outcome is baked in within 48 hours. If you're not comfortable with that risk window, this is a pass. However, the technical quality (vol, coil, prox) and the obvious institutional front-running (4.98x vol into an event) make this a legitimate A-grade for traders who specialize in biotech catalysts. Conviction: Medium-High for event traders, Low for position holders (the catalyst is too imminent to build a durable trend).
Signal: Close at \$43.53 (+13.42%) on vol 4.98x of 20d avg, 2 da

ANALYSIS
CATALYST / TODAY'S DRIVER
Volume explosion (6.58x, the highest in the scan) driving a 15.35% single-day move, likely on a major contract win, earnings whisper, or sector rotation into consumer cyclical/auto. Forward catalyst: Q3 earnings October 26 (83 days) in a tight-float (26M) name with strong pricing power in the aftermarket parts cycle.
BUSINESS & POSITION
Dorman manufactures and distributes automotive replacement parts, serving the repair and maintenance aftermarket. The company benefits from an aging vehicle fleet (average age >12 years in the U.S.) and secular tailwinds from higher miles-driven and parts pricing power.
FACTOR & THEME
Consumer discretionary recovery + aging vehicle fleet. Auto aftermarket is a defensive growth pocket within Consumer Cyclical-less sensitive to new-car sales, more tied to repair activity. Theme is stable but not a top-tier institutional favorite in 2026; the move today is idiosyncratic, not sector-driven.
BREAKOUT SIGNAL
Close at \$147.29 (+15.35%) on vol 6.58x of 20d avg, breaking out from a loose 3.54 ATR base
INSTITUTIONAL
Volume 6.58x is the highest in the entire scan-this is block buying, not retail. The tight float (26M shares) amplifies moves; this looks like a fund taking a position ahead of a known catalyst (e.g., a large OEM contract, guidance raise, or M&A speculation). No insider buying in the last 60 days, but the volume signature speaks for itself.
EARNINGS
EARNINGS IN 83D
EARNINGS CONTEXT
Next print October 26 (83 days out). Consensus unavailable in feed; Dorman historically trades on gross margin expansion and top-line beats tied to parts pricing. The 83-day runway gives this room to build a multi-week trend if the underlying catalyst (unknown to us today) is durable.
KEY RISK
Thesis invalid on a close back below \$130 (the breakout base), or on any signs that today's move was a one-off headline with no follow-through. Auto parts can be lumpy; a contract delay or margin compression at the October print would reverse the setup. The 3.54 base_tight is wider than ideal-this wasn't a coil, it was a breakout from a loose base.
ANALYSIS
The 6.58x volume surge is the single strongest in the scan, and the 15.35% move in a \$4.4B market cap name is institutional-grade force. Disconfirming evidence: the base_tight at 3.54 is the widest among the A-grade candidates-this was NOT a textbook coil, it's a breakout from a loose range. RS line is not at new high, and we have no visibility into what drove today's move (no earnings, no obvious news in the data). If the catalyst is one-and-done (e.g., a single contract announcement already fully priced), this exhausts quickly. However, the volume, RS vs SPY (+16.4), tight float, and 83-day runway to the next earnings give this follow-through potential if institutions continue to accumulate. Conviction: Medium-this is high-quality price-volume action, but the lack of catalyst transparency and wide base introduce uncertainty. Watch for follow-through tomorrow.

RS Line Hi	no
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

Analysis
Catalyst / Today's Driver Breakout to 98% of 52W high on 2.51x volume from a tight 2.12 ATR base; likely sector rotation into utilities/industrials or anticipation of rate-case outcomes. Forward catalyst: Q3 earnings November 2 (90 days) and ongoing regulatory rate cases in its utility segment (electric utilities are benefiting from grid investment and decoupling mechanisms).
Business & Position Otter Tail is a diversified conglomerate with regulated electric utility operations (Otter Tail Power) and manufacturing/plastics segments. The utility segment provides defensive cash flow; the industrial businesses add cyclical leverage to manufacturing recovery.
Factor & Theme Defensive utility income + industrial exposure (plastics, metal fabrication). Benefits from grid modernization capex and stable regulated returns, plus a kicker from manufacturing recovery. Not a pure AI/data-center play, but utilities are seeing renewed interest as power demand accelerates.
Breakout Signal Close at \$93.07 within 2% of 52W high on vol 2.51x of 20d avg from a 2.12 ATR coil
Institutional Volume 2.51x on a 3.23% move with a 2.12 base_tight suggests quiet accumulation by income-focused funds. No insider buying in last 60 days. The setup is technically clean but lacks the institutional excitement (no A/D rating, no flow trend data in feed) to confirm this is more than a rotational bid.
Earnings Earnings in 90D
Earnings Context Next print November 2 (90 days out). Consensus unavailable; utilities typically trade on rate-case outcomes and dividend policy. The 90-day window is long-this is a position for patient holders, not a near-term catalyst trade.
Key Risk Thesis invalid on a close below \$88.50 (the base pivot) or on any adverse rate-case ruling in its utility segment. The RS vs SPY is slightly negative (-1.3), meaning this is underperforming the market despite being at 98% of highs-a yellow flag. If the broader market sells off, this likely gives back gains quickly.
Analysis Technically clean (2.12 base_tight, 98% of 52W high, 2.51x vol), but the RS vs SPY is negative (-1.3) and the RS line is not at new high-this is not leading the market. The 90-day gap to next earnings and lack of obvious near-term catalyst downgrade conviction. The sector (Industrials/Conglomerates) is not in the top-3 weekly leaders, and the stock is a defensive utility hybrid, not a momentum growth name. This is a solid B-grade technical setup for income-oriented accounts, but not an A-grade breakout for aggressive capital. Conviction: Low-Medium.
Signal: Close at \$93.07 within 2% of 52W high on vol 2.51x of 2 Vol vs Avg: 2.51x

ANALYSIS
CATALYST / TODAY'S DRIVER
5.15% move on 1.5x volume into earnings in 2 days (August 6), likely front-running an AUM update or fee guidance. Forward catalyst path: earnings August 6 is the immediate binary; beyond that, the alternatives/PE management industry benefits from continued private-market fundraising if capital markets remain favorable. GRADE UPGRADE: Insider cluster score is 7 (2 buys, \$5.0M total in last 60 days), which triggers the +1 tier upgrade rule in a risk-on environment. Upgraded from C to B.
BUSINESS & POSITION
StepStone is a global private markets investment firm providing advisory, fund-of-funds, and co-investment solutions across private equity, infrastructure, and real assets. The business model is fee-based (management + incentive fees) tied to AUM growth and fund performance.
FACTOR & THEME
Alternatives/private equity management. Benefits from institutional allocators increasing private-market exposure (the "Yale model" endowment shift). However, 2026 has seen fundraising headwinds as LPs digest overallocation; the theme is stable but not accelerating. Financials sector is a top-3 leader this week (+1.9% vs SPY), which adds a half-grade tailwind.
BREAKOUT SIGNAL
Close at \$48.99 (+5.15%) on vol 1.5x of 20d avg, 2 days ahead of earnings
INSTITUTIONAL
Insider cluster score of 7 (2 insiders, \$5.0M in buys over last 60 days) is a HIGH-CONVICTION signal and the primary reason for the grade upgrade from C to B. Management buying \$5M in the open market is rare and material. Volume is only 1.5x (modest), but the insider activity offsets the weak volume signature. No A/D rating or flow data available in feed.
EARNINGS
EARNINGS IN 2D
EARNINGS CONTEXT
Next print August 6 (in 2 days). Consensus unavailable in feed; StepStone typically reports AUM growth, management fees, and incentive fee realization. This is an event setup-outcome determined in 48 hours.
KEY RISK
Thesis invalid on any AUM decline, fee-rate compression, or cautious fundraising outlook at the August 6 print. The RS vs SPY is deeply negative (-16.1%), and the stock is only at 63% of its 52W high-this is NOT a breakout, it's a bounce from a downtrend. A close back below \$46.50 invalidates. Earnings are in 2 days; this is a short-duration bet.
ANALYSIS
Originally a C-grade (weak RS, far from 52W high, wide base), but the \$5.0M insider buying cluster (score 7) in a risk-on regime triggers the +1 tier upgrade to B. Disconfirming evidence: RS vs SPY is -16.1% (deeply underperforming), prox_52w is only 63% (nowhere near breakout territory), and base_tight is 4.32 (loose, not a coil). This is NOT a technical breakout-it's a value/insider-conviction play into an earnings catalyst. The insiders put \$5M to work; that's the single strongest bullish data point. However, earnings are in 2 days, so the trade window is binary and short. Conviction: Medium on the strength of insider buying, but Low on technical follow-through given the weak RS and setup quality. This is a 2-day event bet, not a position trade.
Signal: Close at \$48.99 (+5.15%) on vol 1.5x of 20d avg, 2 days
Vol vs Avg: 1.5x

ANALYSIS
CATALYST / TODAY'S DRIVER
16.24% pop on 2.12x volume following yesterday's earnings report (August 3); likely beat-and-raise on offshore rig utilization and day-rates. Forward catalyst path: Energy sector is a top-3 weekly leader (+1.9% vs SPY), and offshore drilling activity is in a multi-quarter upcycle; next earnings ~90 days out (Nov 2026) with ongoing contract announcements and commodity price sensitivity.
BUSINESS & POSITION
Tidewater is the world's largest offshore support vessel operator, providing marine services to the global energy industry (primarily oil & gas E&P). The business is a leveraged bet on offshore drilling activity, rig counts, and vessel day-rates-highly cyclical.
FACTOR & THEME
Energy sector leadership + offshore drilling recovery. The offshore market is in a multi-year recovery from the 2015-2020 downturn; day-rates and utilization are improving as operators restart deepwater projects. However, oil prices and capital discipline remain key risks. Energy is a top-3 sector leader this week, adding half-grade tailwind.
BREAKOUT SIGNAL
Close at \$83.08 (+16.24%) on vol 2.12x of 20d avg, day after earnings
INSTITUTIONAL
Volume 2.12x on a 16% post-earnings gap is strong but not extreme (compare to DORM at 6.58x). The move suggests institutions liked the print, but the RS vs SPY is negative (-9.1%) over 12 weeks, meaning this is a turnaround/recovery story, not a sustained leader. No insider buying in last 60 days. The setup quality is mixed: big move, but from a wide base (3.59).
EARNINGS
REPORTED
EARNINGS CONTEXT
Reported August 3 (yesterday). The 16% move implies a significant beat and/or guidance raise; without consensus data in feed, we infer strong revenue/margin performance tied to vessel utilization and day-rate pricing. Historical quarterly beats unavailable in feed.
KEY RISK
Thesis invalid on a close back below \$75 (the pre-earnings base), or on any pullback in offshore drilling activity (tracked via rig counts, oil prices, or E&P capex cuts). The stock is up 16% in one day-much of the catalyst is already priced. Oil price weakness or a broader energy selloff would reverse this quickly. The wide 3.59 base_tight suggests this was not a coil-it's a breakout from a loose range.
ANALYSIS
Strong post-earnings reaction (16.24%) in a top-3 sector (Energy, +1.9% vs SPY this week) earns a B. However, disconfirming evidence is significant: RS vs SPY is -9.1% (underperforming over 12 weeks), base_tight is 3.59 (wide, not a coil), and RS line is NOT at new high. This is a catch-up move in a lagging name, not leadership. The earnings catalyst is now behind us-there's no obvious forward catalyst for 90 days. The sector tailwind (Energy leadership) and the post-earnings momentum provide follow-through potential, but this is a trade, not a core position. Conviction: Medium on a 1-2 week follow-through, Low on a multi-month hold.
Signal: Close at \$83.08 (+16.24%) on vol 2.12x of 20d avg, day

Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
4.39% post-earnings move on 2.74x volume following August 3 report; likely beat driven by trans-Pacific freight rates and Hawaii-market strength. Forward catalyst: next earnings ~90 days out; marine shipping is sensitive to trans-Pacific trade volumes, fuel costs, and China reopening dynamics-monitor weekly freight-rate indices (SCFI, FBX) for continuation signals.
BUSINESS & POSITION
Matson operates container shipping services in the Pacific, primarily serving Hawaii, Guam, and Micronesia, with additional trans-Pacific routes (China, Japan to U.S. West Coast). The business benefits from Hawaii's captive market (minimal competition) and trans-Pacific trade recovery.
FACTOR & THEME
Marine shipping / logistics. Exposed to U.S.-China trade, fuel prices, and Hawaii tourism/consumption. The Pacific shipping market has stabilized after the 2021-2022 rate spike and subsequent collapse; current rates are normalizing. Not a top-tier secular theme, but Matson's Hawaii monopoly provides defensive moat.
BREAKOUT SIGNAL
Close at \$216.56 (+4.39%) on vol 2.74x of 20d avg, day after earnings
INSTITUTIONAL
Volume 2.74x on a 4.39% post-earnings move suggests institutional approval of the print. The tight float (29.5M) and clean 2.1 base_tight indicate this was setting up technically before earnings. No insider buying in last 60 days. The stock is 93.9% of 52W high, but RS line is not at new high-this is strong but not leading.
EARNINGS
REPORTED
EARNINGS CONTEXT
Reported August 3. The 4.39% move implies a beat; marine shipping firms have been reporting stable-to-improving trans-Pacific volumes and rate stabilization. Next print likely early November (~90 days out). Historical beat data unavailable in feed.
KEY RISK
Thesis invalid on a close below \$205 (the earnings base) or on any signs of trans-Pacific freight-rate deterioration (monitor SCFI weekly). Fuel cost spikes, U.S.-China trade tensions, or Hawaii demand weakness would pressure the story. The catalyst is now behind us; follow-through depends on freight-rate trends, not another binary event.
ANALYSIS
Clean post-earnings breakout (4.39% on 2.74x vol, 2.1 base_tight, 93.9% of 52W high) earns a B. Disconfirming evidence: RS line is not at new high, and the earnings catalyst is now behind us with no obvious forward event for 90 days. Marine shipping is not a top-3 sector, and the broader theme (trans-Pacific trade) is stabilizing, not accelerating. This is a solid momentum follow-through for 1-2 weeks, but lacks the catalyst path and sector wind for an A. Conviction: Medium on near-term follow-through, Low on extended hold.

ANALYSIS
CATALYST / TODAY'S DRIVER
Volume surge (1.92x) with no price change (0.00%) at 93.6% of 52W high-classic silent-build absorption ahead of earnings August 25 (21 days). Forward catalyst: Q2 earnings August 25 will be key for Box's AI collaboration roadmap, enterprise deal flow, and margin expansion. Cloud infrastructure software is seeing renewed attention as AI workflow layers gain traction.
BUSINESS & POSITION
Box provides cloud content management and collaboration software for enterprises, competing with Microsoft (SharePoint), Google (Drive), and Dropbox. The company is pivoting toward AI-powered workflow automation and secure enterprise collaboration-a credible but crowded space.
FACTOR & THEME
Cloud infrastructure / AI collaboration. Box is positioning as an AI-native content layer (e.g., Box AI for document intelligence). The theme is credible but Box is a laggard vs. hyperscalers. Software infrastructure has underperformed in 2026 as capital rotates to mega-cap AI winners.
BREAKOUT SIGNAL
Close at \$31.70 (0.00%) on vol 1.92x of 20d avg, silent-build pattern into August 25 earnings
INSTITUTIONAL
Volume 1.92x on zero price change is textbook silent accumulation-institutions absorbing supply without moving the print. The large float (142.8M) allows for stealth positioning. No insider buying in last 60 days. The 21-day runway to earnings gives this room to build, but the 3.76 base_tight is wide-this wasn't a tight coil.
EARNINGS
EARNINGS IN 21D
EARNINGS CONTEXT
Next print August 25 (21 days). Consensus unavailable in feed; Box has historically beaten on billings and FCF but faces competitive pressure on growth. The market will focus on AI product traction and guidance. A beat-and-raise could trigger a breakout; a miss or cautious guidance kills it.
KEY RISK
Thesis invalid on a close below \$29.50 (the base support) or on any disappointing AI product traction / billings guidance at the August 25 print. Software infrastructure is out of favor; if Box fails to show AI monetization, the setup unwinds. The 21-day window to earnings is the trade horizon.
ANALYSIS
Silent-build pattern (1.92x vol, 0.00% price change) into earnings in 21 days is a classic institutional setup, earning a B. RS vs SPY at +18.9% is strong, and prox_52w at 93.6% puts it in breakout range. Disconfirming evidence: base_tight 3.76 is wide (not a coil), RS line is not at new high, and software infrastructure is not a leadership sector in 2026. The float is large (142.8M), which can dampen volatility. This is a 3-week hold into earnings, not a breakout chase. If August 25 delivers, this re-rates; if not, it's dead money. Conviction: Medium on the silent-build setup, but Low on sector/theme momentum.
Signal: Close at \$31.70 (0.00%) on vol 1.92x of 20d avg, silent

ANALYSIS

CATALYST / TODAY'S DRIVER

59.6% RS vs SPY (the second-strongest in the scan) with 6.03% move on 1.54x volume into earnings TODAY (August 4). The market is positioning for a beat; forward catalyst path depends entirely on today's print-if Xometry beats and guides up, the next catalyst is Q3 earnings ~90 days out, plus ongoing adoption of its AI-driven manufacturing marketplace.

BUSINESS & POSITION

Xometry operates an on-demand manufacturing platform (marketplace connecting buyers of custom parts with suppliers), leveraging AI for instant quoting and supplier matching. The business model is a take-rate on parts transactions; growth depends on enterprise customer adds and supplier network effects.

FACTOR & THEME

AI-driven industrial marketplace / manufacturing digitization / reshoring. Xometry benefits from supply-chain diversification and domestic manufacturing trends. The 59.6% RS vs SPY is elite, signaling this is a top-tier relative-strength leader. Industrial Distribution is not a top-3 sector, but Xometry is an AI/tech hybrid within Industrials.

BREAKOUT SIGNAL

Close at \$92.26 (+6.03%) on vol 1.54x of 20d avg, earnings report due TODAY

INSTITUTIONAL

Volume only 1.54x (lowest among A/B candidates) but RS of 59.6% is the second-best in the scan-this has been a sustained, low-volatility grind higher (institutions accumulating over weeks, not days). No insider buying in last 60 days. The setup is extended (87% of 52W high) but the RS trend is elite.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Earnings TODAY (August 4). Consensus unavailable in feed; Xometry is unprofitable but growing revenue rapidly (historically 30-40% YoY). The market will focus on revenue beat, gross margin trends, and enterprise customer adds. A beat-and-raise could drive a 10-15% move; a miss kills the setup immediately.

KEY RISK

Binary thesis invalid TODAY based on earnings results. If Xometry misses revenue or guides down, close below \$80 invalidates. The stock is up 6% into the print-much of the optimism is priced. The RS is elite, but earnings today means the trade resolves in hours, not days.

ANALYSIS

Elite 59.6% RS vs SPY (2nd-best in scan) and sustained leadership trend earn a B, but this is a pure earnings bet-results due TODAY. Disconfirming evidence: volume is only 1.54x (the lowest among serious candidates), base_tight is 3.25 (wide), and RS line is not at new high despite 87% of 52W high (bearish divergence). The 6% pre-earnings move suggests much optimism is baked. If you're reading this after market close on August 4, the trade is over-either it gapped up 10%+ on a beat or it's dead. For real-time traders pre-earnings, this is a coin flip. Conviction: Low-binary event risk, no forward visibility.

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout to 99.6% of 52W high on 1.7x volume, likely driven by sector rotation into Financials (top-3 sector this week, +1.9% vs SPY) and/or AUM flow announcements. Forward catalyst: Q3 earnings October 30 (87 days); WisdomTree benefits from ETF industry growth, thematic/crypto product launches, and market-share gains in alternatives/digital assets.

BUSINESS & POSITION

WisdomTree is an ETF sponsor offering thematic, factor, and commodity ETFs, plus digital-asset products (crypto ETPs). The business model is fee-based (expense ratios on AUM); growth depends on fund flows, market performance, and new product launches (e.g., Bitcoin/Ethereum ETPs).

FACTOR & THEME

Asset management / ETF industry growth / crypto exposure. WisdomTree has leaned into crypto ETPs (e.g., Bitcoin/Ethereum products in Europe), which adds speculative appeal but also regulatory risk. Financials sector is a top-3 leader this week (+1.9% vs SPY), adding half-grade tailwind. The ETF industry benefits from passive-investing secular trends.

BREAKOUT SIGNAL

Close at \$22.14 (+5.48%) on vol 1.7x of 20d avg, at 99.6% of 52W high from wide 4.67 ATR base

INSTITUTIONAL

Volume 1.7x on a 5.48% move at 99.6% of 52W high suggests breakout interest, but the wide 4.67 base_tight means this was not a coil-it's a breakout from a loose range. No insider buying in last 60 days. The large float (134.3M) and sector leadership (Financials) provide institutional support, but conviction is mixed.

EARNINGS

EARNINGS IN 87D

EARNINGS CONTEXT

Next print October 30 (87 days). Consensus unavailable; WisdomTree typically reports AUM, net flows, and fee trends. The 87-day gap is long-limited near-term catalyst beyond sector rotation momentum.

KEY RISK

Thesis invalid on a close below \$20.50 (the base support) or on any AUM outflows, fee compression, or crypto-ETP regulatory headwinds at the October 30 print. Asset management is crowded; if flows reverse or markets correct, this unwinds quickly. The 4.67 base_tight is wide-this is a momentum chase, not a coil breakout.

ANALYSIS

Breakout to 99.6% of 52W high in a top-3 sector (Financials, +1.9% vs SPY) earns a B, but the 4.67 base_tight is wide (not a coil) and the 87-day gap to earnings limits catalyst visibility. Disconfirming evidence: RS line is not at new high, volume is only 1.7x (modest), and the stock is at all-time highs with no obvious near-term event. This is sector-rotation momentum, not a fundamental re-rating. For Financials-focused momentum traders, this is a 1-2 week ride; for others, it's extended. Conviction: Low-Medium.

Signal: Close at \$22.14 (+5.48%) on vol 1.7x of 20d avg, at 99.

Vol vs Avg: 1.7x
