## ANALYSIS

### CATALYST / TODAY'S DRIVER

Massive volume surge (3.5x) into 52W high after prolonged +105% outperformance vs SPY signals institutional repositioning ahead of Dec 8 earnings. Forward catalyst: Q3 print on Dec 8 with AI-powered customer engagement becoming critical enterprise spend category; any guidance raise or net retention acceleration will extend the breakout.

### BUSINESS & POSITION

Braze is a customer engagement platform enabling real-time, personalized marketing across mobile, web, and email channels. The company is pivoting aggressively into AI-powered journey orchestration, positioning as the infrastructure layer for enterprise marketing automation in a post-cookie world.

### FACTOR & THEME

AI-native enterprise software with tailwinds from privacy regulation (cookie deprecation), digital transformation, and marketing spend recovering post-2025 slowdown. The sector is seeing capital rotation into best-of-breed category leaders as large CMO budgets consolidate onto fewer platforms.

### BREAKOUT SIGNAL

Close above $45.82 (52W high) on volume >3.5x 20d avg

### INSTITUTIONAL

Volume spike to 3.5x average on modest 0.44% gain is classic absorption-institutions building without spiking price. No insider activity in last 90 days. The 105% RS vs SPY over 12 weeks is top-decile momentum, suggesting smart money has been accumulating through the base despite the wide 13.2 ATR range (likely reflecting the volatile run from $15 to $46).

### EARNINGS

EARNINGS IN 48D

### EARNINGS CONTEXT

Next print Dec 8. Braze has beaten revenue estimates in 3 of last 4 quarters but remains unprofitable (negative EPS irrelevant for SaaS growth stage). Key metrics: ARR growth, net retention rate (target >110%), and any AI product traction commentary will drive re-rating.

### KEY RISK

Thesis invalid on a close below $42.50 (prior resistance turned support) or any guidance miss/ARR deceleration at the Dec 8 print; wide 13.2 base indicates choppy accumulation, not textbook coil.

### ANALYSIS

Strongest disconfirming evidence: RS line NOT at new high despite price touching 52W high, and the 13.2 base_tight ratio is far too wide for institutional-grade VCP (textbook is <2.0). However, the +105% RS vs SPY and 3.5x volume surge into the high are undeniable conviction signals. Downgraded from A solely on base quality and missing RS confirmation; otherwise setup is elite. Mega-cap leadership regime creates crosswind for SMID software names. Conviction: Medium.

**Signal: Close above $45.82 (52W high) on volume >3.5x 20d avg**

**Vol vs Avg: 3.53x**

## ANALYSIS

### CATALYST / TODAY'S DRIVER

Clean breakout to all-time high on 1.9x volume after +23% 12-week outperformance signals leadership in electrical infrastructure. Forward catalyst: Q4 earnings Nov 19 will be critical test of demand sustainability as data center buildout, utility grid upgrades, and reshoring/IRA tailwinds flow through; any backlog or margin commentary beats will extend.

### BUSINESS & POSITION

Atkore manufactures electrical conduit, cable management systems, and safety products serving data centers, utilities, solar/renewables, and commercial construction. The company is levered to three secular themes: AI infrastructure (data center electrical), energy transition (solar racking, EV charging conduit), and reshoring (domestic manufacturing capacity expansion under IRA/CHIPS).

### FACTOR & THEME

Direct play on AI data center capex boom (electrical backbone for GPU farms), grid modernization (utilities spending to accommodate renewables), and Inflation Reduction Act-driven domestic manufacturing. Energy sector leadership (+9.3% this week) and Utilities (+7.0%) provide strong thematic tailwind.

### BREAKOUT SIGNAL

Close at $94.96 (new ATH) on volume 1.92x 20d avg

### INSTITUTIONAL

Volume 1.92x on flat price action into new all-time high is textbook quiet accumulation. Small 31.8M float allows for rapid institutional repositioning. No insider activity in last 90 days, but the +23% RS vs SPY and clean base (2.25 ATR ratio, near-ideal) suggest professional money has been methodically building. Energy sector leadership provides sector rotation fuel.

### EARNINGS

EARNINGS IN 29D

### EARNINGS CONTEXT

Next print Nov 19. Atkore has historically been volatile on earnings but the company's Q3 FY26 will capture initial IRA project flow-through and data center CapEx acceleration. Consensus expecting continued margin expansion; any backlog growth or FY27 guide raise is the re-rating catalyst.

### KEY RISK

Thesis invalid on a close below $90.00 (prior consolidation support) or any sign of data center electrical demand pausing/utility project delays at the Nov 19 print; small float creates two-way volatility risk.

### ANALYSIS

Strongest disconfirming evidence: RS line is NOT at new highs despite price at ATH, which typically signals the leadership move is newer/unconfirmed by breadth. However, the +23% RS vs SPY, tight 2.25 base, and alignment with leading Energy/Utilities sectors are strong positives. Macro regime (mega-cap leadership) creates headwind for SMID industrials despite thematic fit. Nov 19 earnings are the next inflection; current setup is a pre-positioning trade, not a post-catalyst chase. Conviction: Medium.

**Signal: Close at $94.96 (new ATH) on volume 1.92x 20d avg**

**Vol vs Avg: 1.92x**
