ANALYSIS

CATALYST / TODAY'S DRIVER

Reporting Q2 earnings today (Aug 12); likely beat given magnitude of breakout. Forward catalyst: Q3 guidance will be key-any acceleration in merchant adoption or improvement in take rates extends momentum into October earnings (Nov ~90d out).

BUSINESS & POSITION

Riskified provides AI-powered fraud prevention and chargeback management for e-commerce merchants, processing billions in transactions. Operates on a risk-share model (paid only when transactions approve), aligning economics with merchant success.

FACTOR & THEME

E-commerce infrastructure play with AI tailwinds-fraud detection is mission-critical and sticky. Sector rotation into profitable SaaS after peak-valuation washout. Theme momentum stable; not accelerating but merchant payment volume growth is secular.

BREAKOUT SIGNAL

Close above \$6.32 on vol >1041% of 20d avg

INSTITUTIONAL

Explosive 10.4x volume on earnings print signals institutional repositioning after 40%+ drawdown from highs. RS line at 52-week high is the Qullamaggie #1 early leader signal-institutions are establishing new positions ahead of a potential re-rating cycle. Float is clean at 61.7M; this can move fast.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Reporting today (Aug 12); consensus unknown but the +18.8% gap and 10x volume imply material beat or guide-up. Check last four quarters for serial-beat pattern; if present, stock re-rates higher on each print and today's move has legs.

KEY RISK

Thesis invalid on a close back below \$5.80 (prior resistance/base top) or any revenue guidance disappointment in today's report that triggers profit-taking from the gap.

ANALYSIS

RS line at new high + 10x volume + breakout to 52W high on earnings = textbook A-grade setup. Disconfirming evidence: base is wide (6.58) and this is an earnings-day gap-if guidance disappoints, the reversal will be violent. However, RS leadership and sector tailwind (Technology +3.5% vs SPY this week) support follow-through if the print is clean. Conviction: Medium (high technical quality, but need to see guidance to confirm durability).

Signal: Close above \$6.32 on vol >1041% of 20d avg

ANALYSIS
CATALYST / TODAY'S DRIVER
No same-day news-pure technical breakout with RS line at 52W high (the #1 early leader signal). Forward catalyst: Phase 2b data readout for epetraborole (tuberculosis) expected in H2 2026 or early 2027; any partnership discussions or non-dilutive funding (e.g., NIH/Gates Foundation grants) extends momentum.
BUSINESS & POSITION
AN2 Therapeutics is developing epetraborole, a novel boron-based antibiotic for drug-resistant tuberculosis (TB). TB is a \$2B+ orphan market with high unmet need; epetraborole targets both drug-sensitive and multi-drug-resistant strains with differentiated mechanism.
FACTOR & THEME
Infectious disease biotech with orphan/global-health tailwinds. TB is a WHO priority disease; regulatory fast-track and premium pricing likely if approved. Healthcare sector showing relative strength (+1.2% vs SPY this week). Theme momentum stable-not crowded, under-the-radar asset.
BREAKOUT SIGNAL
Close above \$6.28 on vol >234% of 20d avg
INSTITUTIONAL
2.3x volume and RS line at 52W high = institutional early positioning. Tiny float (19.9M) and small cap (\$230M) mean a few specialist biotech funds can drive significant price action. No recent insider buying, but pre-clinical/early-stage biotechs often restrict insiders ahead of data. The RS leadership is the tell-this is not retail.
EARNINGS CONTEXT
No earnings date provided; as a pre-revenue biotech, quarterly reports are non-events. Focus is on clinical trial progress, cash burn, and partnership/funding announcements.
KEY RISK
Thesis invalid on a close back below \$5.80 (prior base top) or any Phase 2b trial delay/adverse event disclosed. Binary risk: if Phase 2b data (expected H2 2026/early 2027) is negative, stock re-prices to cash value (~\$2-3 range). Micro-cap illiquidity amplifies downside.
ANALYSIS
RS line at new high + tight base (2.82) + breakout to 87.3% of 52W high = textbook A-grade Qullamaggie setup, even without same-day news. Disconfirming evidence: volume is only 2.3x (vs. 3-5x+ for explosive A setups) and biotech binary risk is extreme-this is a hedge-fund special-situations trade, not a broad institutional buy. Healthcare sector tailwind supports. Conviction: Medium-High (pure technical A-grade, but binary risk and micro-cap size require tight risk management; this is a 2-3% portfolio position max).
Signal: Close above \$6.28 on vol >234% of 20d avg
Vol vs Avg: 2.34x

ANALYSIS

CATALYST / TODAY'S DRIVER

Reporting Q2 earnings today (Aug 12); the +18% move on 6.6x volume suggests a beat/raise. Forward catalyst: any acceleration in enterprise bookings or margin expansion guidance positions this for a re-rating into Q3 print (~Nov).

BUSINESS & POSITION

Similarweb provides digital intelligence and competitive analytics to enterprises, tracking billions of web/app interactions. Competes with Adobe Analytics, Google Analytics 360, and niche players; differentiation is cross-platform unified view.

FACTOR & THEME

AI-powered analytics and marketing-tech infrastructure. Secular shift to data-driven decision-making supports TAM expansion. Technology sector in favor (+3.5% vs SPY this week), but SaaS multiples remain compressed-any profitability inflection catalyzes a revaluation.

BREAKOUT SIGNAL

Close above \$8.79 on vol >657% of 20d avg

INSTITUTIONAL

6.6x volume and RS of +177.4 vs SPY (best in this entire scan) screams institutional accumulation. Small float (38.7M) creates scarcity; a few large buyers can drive meaningful price action. No insider buying, but the volume profile today is the tell-this is not retail.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Reporting today (Aug 12); consensus EPS/rev unknown from this feed. The magnitude of the gap (+18.46%) implies either a material beat or transformative guidance (new product, strategic partnership). Serial-beat history would confirm if this is a re-rate candidate.

KEY RISK

Thesis invalid on a close back below \$7.80 (prior consolidation midpoint) or any deceleration in ARR growth guidance in today's report. Also, at 81.8% of 52W high, stock is not yet at breakout-a failed follow-through below \$8.50 negates setup.

ANALYSIS

Strongest RS in the scan (+177.4 vs SPY) and explosive volume, but RS line NOT at new high (the institutional confirmation signal) and prox_52w at 81.8 downgrades from A. Disconfirming evidence: wide base (3.6) and earnings-day gap risk-if guidance is mixed, the reversal erases the move. Technology sector tailwind is supportive. Conviction: Medium (await confirmation that guidance justifies the re-rate).

ANALYSIS
CATALYST / TODAY'S DRIVER
Reporting Q2 today (Aug 12); breakout to 52W high on 3.4x volume likely reflects positive clinical data read-through or trial enrollment update. Forward catalyst: Phase 3 data readout for hereditary angioedema (HAE) program expected in late 2026/early 2027-binary event with blockbuster potential if positive.
BUSINESS & POSITION
Pharvaris is developing oral bradykinin B2 receptor antagonists for hereditary angioedema (HAE), a rare orphan disease with ~\$3B global market. Lead asset PHA121 in Phase 3; if approved, competes with Takeda's Takhzyro and BioCryst's Orladeyo.
FACTOR & THEME
Rare disease biotech with orphan drug economics (premium pricing, small patient populations, regulatory fast-track). Healthcare sector showing relative strength (+1.2% vs SPY this week). HAE is a validated market with incumbent therapies; differentiation is oral administration vs. injection.
BREAKOUT SIGNAL
Close above \$36.46 on vol >342% of 20d avg
INSTITUTIONAL
3.4x volume and breakout to 99.5% of 52W high on an earnings day signals institutional repositioning ahead of Phase 3 data. Small float (39.3M) amplifies moves. No recent insider buying, but biotech insiders are often restricted ahead of data catalysts. The volume profile is institutional-likely specialist healthcare funds adding ahead of the binary.
EARNINGS
EARNINGS TODAY
EARNINGS CONTEXT
Reporting today (Aug 12); as a pre-revenue biotech, focus is on cash runway and trial progress, not EPS. Any commentary on Phase 3 trial enrollment completion or timeline acceleration for data readout is the key catalyst.
KEY RISK
Thesis invalid on a close back below \$34.00 (prior resistance) or any Phase 3 trial delay/adverse safety signal disclosed in today's report. Binary risk: if Phase 3 data (expected late 2026) is negative or inconclusive, stock re-prices to cash value (~\$10-15 range).
ANALYSIS
At 99.5% of 52W high with tight base (2.56) and 3.4x volume-strong technical setup. Disconfirming evidence: RS line not at new high, and +4.65% move is modest for a biotech catalyst (suggests the news may already be known/leaked). Healthcare sector tailwind is supportive. Conviction: Medium (clean setup, but binary Phase 3 risk caps position size; this is a hedge-fund special-situations trade, not a core momentum hold).
Signal: Close above \$36.46 on vol >342% of 20d avg

Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
No same-day news-pure technical breakout on 4.3x volume, likely driven by aerospace sector rotation and strong commercial aviation demand. Forward catalyst: Q3 earnings Nov 5 (~85d) will reveal if backlog conversion is accelerating; any defense contract wins or new OEM partnerships extend momentum.
BUSINESS & POSITION
Astronics provides advanced electronics for aerospace (in-flight connectivity, power systems, lighting) and defense. Blue-chip customers include Boeing, Airbus, major airlines; 60%+ revenue from commercial aviation, balance from military and test systems.
FACTOR & THEME
Defense spending cycle + commercial aviation recovery (narrowbody production ramp at Boeing/Airbus). Secular tailwind: cabin connectivity upgrades (5G, streaming) and electrification of aircraft systems. Defense budget momentum stable; commercial aerospace in multi-year upcycle.
BREAKOUT SIGNAL
Close above \$87.89 on vol >429% of 20d avg
INSTITUTIONAL
4.3x volume and breakout near 52W high (95%) signals institutional accumulation. Small float (38.8M) creates scarcity; aerospace/defense specialist funds are likely buyers. No recent insider buying, but institutions are rotating into defense and aerospace on geopolitical tailwinds and budget visibility.
EARNINGS
EARNINGS IN 85D
EARNINGS CONTEXT
Next print Nov 5 (~85d). Consensus unknown; check if Astronics has a serial-beat history-if yes, the stock re-rates on each print. Focus on backlog conversion rate and defense segment growth (higher margin).
KEY RISK
Thesis invalid on a close back below \$78.00 (prior resistance/breakout pivot) or any Boeing/Airbus production cuts disclosed before Nov earnings. Also, extended from base-a 10%+ pullback to digest gains is normal; use \$80 as a re-entry zone if it tests.
ANALYSIS
Strong technical breakout (4.3x vol, 95% of 52W high, RS +33.2), but RS line not at new high and base is wide (5.12), downgrading from A. Disconfirming evidence: no clear same-day catalyst and Industrials sector not in the top 3 this week (Energy/Tech/Healthcare leading)-this is a lagging-sector play catching up, not a leading-sector breakout. Defense tailwinds are durable. Conviction: Medium (good setup, but lack of RS line new-high and sector positioning cap conviction).
Signal: Close above \$87.89 on vol >429% of 20d avg
Vol vs Avg: 4.29x

RS Line Hi	no
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
No same-day news-likely sector rotation into defensive consumer services or AI-powered tax-prep positioning. Forward catalyst: Q1 (fiscal) earnings Nov 5 (~85d); any commentary on AI-driven client acquisition or pricing power for tax season 2027 extends the move.
BUSINESS & POSITION
H&R Block is the #2 U.S. tax preparation provider (behind Intuit TurboTax), serving ~20M clients via retail and digital. Diversifying into adjacent fintech (banking, lending) to monetize year-round engagement and offset seasonality.
FACTOR & THEME
Defensive consumer services with AI transformation narrative-Block is deploying generative AI for tax advice and document automation. Secular headwind: TurboTax dominance in DIY; secular tailwind: IRS complexity and aging demographics favor assisted prep. Consumer recovery theme is neutral to slightly supportive.
BREAKOUT SIGNAL
Close above \$54.18 on vol >354% of 20d avg
INSTITUTIONAL
3.5x volume and 92% of 52W high suggest institutional repositioning-likely value/dividend funds rotating into stable, high-FCF names in a risk-on environment. Large float (121.3M) requires sustained buying; this is not a small-cap squeeze. No insider buying, typical for a mature, widely-held name.
EARNINGS
EARNINGS IN 85D
EARNINGS CONTEXT
Next print Nov 5 (~85d); fiscal Q1 is seasonally weak (tax season is Q3/Q4). Focus on any AI product announcements, pricing for tax season 2027, and fintech segment monetization (Spruce banking product).
KEY RISK
Thesis invalid on a close back below \$50.00 (prior consolidation) or any IRS simplification announcement that reduces assisted-prep TAM. Also, large-cap size (\$6.87B) limits volatility-this is not a momentum trade; it's a re-rating play on AI/fintech pivot.
ANALYSIS
Strong RS (+47.7 vs SPY) and breakout near 52W high (92.3%), but wide base (5.33) and no RS line new-high downgrade from A. Disconfirming evidence: Consumer Cyclical sector not in top 3 this week, and large-cap size (\$6.87B) limits upside-this is a positional trade, not a momentum runner. Mega-cap leadership regime (noted in market context) is a crosswind for SMID; HRB's size helps but also caps alpha. Conviction: Medium (clean setup but limited explosive upside given float and sector).
Signal: Close above \$54.18 on vol >354% of 20d avg
Vol vs Avg: 3.54x
