ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout on earnings report 2 days ago, with RS line at 52-week high confirming institutional accumulation in leading Healthcare sector (+12.9% vs SPY). Forward catalyst: next earnings cycle in ~90 days (February 2027) with continued volume growth and margin expansion as sector leadership extends.

BUSINESS & POSITION

Regional hospital operator with facilities across multiple states, benefiting from post-pandemic volume recovery and staffing normalization. Positioned to capitalize on consolidation trends in fragmented community hospital markets.

FACTOR & THEME

Healthcare sector rotation (strongest sector +12.9% vs SPY), defensive positioning in Risk-Off regime, demographic tailwinds from aging population. Theme momentum accelerating as capital flows into healthcare leaders.

BREAKOUT SIGNAL

Close above $17.30 on vol 5.81x 20d avg, RS line new high

INSTITUTIONAL

Volume 5.81x average on earnings breakout signals institutional block buying. Tight float (21.7M) amplifies moves. RS line at new high is Qullamaggie's #1 early leader signal - institutions re-rating the name higher. Healthcare sector leadership attracts momentum capital.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported November 4; stock up 8.81% post-earnings suggests beat/raise. Next report expected February 2027. Recent post-earnings strength indicates serial beat potential and re-rating cycle underway.

KEY RISK

Thesis invalid on close below $15.80 (20MA support) or if Healthcare sector leadership reverses. Risk-Off macro creates failure risk for most breakouts despite sector strength.

ANALYSIS

RS line at 52W high + sector leadership (+12.9% Healthcare vs SPY) + post-earnings breakout to within 2% of 52W high = textbook institutional accumulation. Disconfirming: base_tight 8.81 is wide (far from VCP coil), and Risk-Off regime kills most breakouts. However, Healthcare is THE leading sector and RS line new high is rare/powerful. Conviction: Medium - setup quality is A-grade but macro headwind and wide base temper follow-through odds.

Signal: Close above $17.30 on vol 5.81x 20d avg, RS line new hi

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings breakout to new 52-week high (99.4% proximity) with RS line confirming leadership. Forward catalyst: next earnings ~February 2027, plus holiday season sales data through December and January guidance - key tests of consumer spending strength in premium home furnishings.

BUSINESS & POSITION

Premium home furnishings retailer targeting affluent consumers, with showroom + e-commerce model. Benefits from housing market stabilization and high-end consumer resilience despite broader macro softness.

FACTOR & THEME

Consumer recovery theme for high-income cohort, housing market stabilization after 2024-2025 downturn. Premium discretionary spending has bifurcated from mass market - affluent consumer remains strong.

BREAKOUT SIGNAL

Close at new 52W high $14.19 on vol 2.54x 20d avg, RS line new high

INSTITUTIONAL

Volume 2.54x on post-earnings breakout to new 52W high with RS line at new high = institutions pricing in re-acceleration. Float 52.2M is moderate; significant insider ownership limits freely traded shares. RS line new high is the ultimate confirmation of smart money accumulation ahead of the crowd.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported November 5 (1 day ago); 9.66% gain suggests strong beat/raise. Next print expected late February 2027. Holiday quarter (Q4) will be critical - if they guide up into spring 2027, setup extends.

KEY RISK

Thesis invalid on close below $13.20 (prior resistance/pivot) or weak holiday sales commentary at next earnings. Consumer discretionary is highly cyclical; macro deterioration kills premium spending fast.

ANALYSIS

RS line at new high + price at new 52W high (99.4%) + strong RS vs SPY (+48.5) + post-earnings breakout = classic Qullamaggie A-grade leader. Disconfirming: base_tight 4.29 is loose, and Consumer Cyclical in Risk-Off is a headwind. However, RS line new high overrides - this is institutional repositioning. Conviction: Medium-High - technical setup is pristine, but macro and sector (cyclical) create execution risk.

Signal: Close at new 52W high $14.19 on vol 2.54x 20d avg, RS l

ANALYSIS

CATALYST / TODAY'S DRIVER

42% post-earnings surge on November 5 report, likely beat/guidance raise. Forward catalyst: defense budget authorization cycles (Q1 2027), contract awards, and next earnings ~February 2027. CRITICAL: 3 insiders bought $1.0M in last 60 days (cluster score 11) - material C-suite conviction signals they see sustained upside ahead. Risk-On upgrade applies but negated by Risk-Off regime.

BUSINESS & POSITION

Aerospace & defense contractor exposed to government spending, satellite systems, or UAV/space infrastructure (specific segment unclear). Positioned in long-cycle defense budget expansion and modernization programs.

FACTOR & THEME

Defense spending tailwind (bipartisan support, geopolitical tension), space economy growth if satellite/launch-related. Defense is counter-cyclical and defensive in Risk-Off - sector holds better than cyclicals.

BREAKOUT SIGNAL

Close above $45.61 on vol 3.08x 20d avg, post-earnings surge

INSTITUTIONAL

Volume 3.08x on 42% earnings pop signals large institutional repositioning. INSIDER BUYING: 3 distinct insiders purchased $1.0M in last 60 days (cluster score 11) - this is top-tier conviction and the single strongest forward-looking signal. Insiders are rare buyers; when C-suite or board buys material size ahead of a catalyst, it's actionable. Float 102.6M provides liquidity for funds.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported November 5 (yesterday); 42% surge indicates massive beat/raise or contract win disclosure. Next print expected February 2027. If guidance was raised materially, setup has legs into Q1 defense budget/contract season.

KEY RISK

Thesis invalid on close below $38.00 (prior resistance) or if RS vs SPY remains deeply negative (<-15) into year-end, signaling persistent weakness vs market. Stock 61% below 52W high despite move - prior downtrend creates overhead supply risk. Risk-Off regime is a significant headwind.

ANALYSIS

Disconfirming evidence is severe: RS vs SPY is -22.0 (deep underperformance), prox_52w only 38.5% (still 61% below highs), RS line NOT at new high, and Risk-Off regime kills most breakouts. However, $1.0M insider buying from 3 insiders (cluster 11) is rare and powerful - C-suite doesn't deploy capital unless conviction is high. Earnings pop + insider cluster + defense sector (defensive) = follow-through possible but RS weakness and macro are major drags. Conviction: Medium - insider buying upgrades to B but not A given RS/macro headwinds.

Signal: Close above $45.61 on vol 3.08x 20d avg, post-earnings

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings breakout on November 4 report, now 92.8% of 52W high. Forward catalyst path: Phase 3 data readout or regulatory filing milestone expected 2027 (EDG-5506 for Duchenne muscular dystrophy or Becker MD), investor updates, and potential partnership/licensing deals as commercialization nears.

BUSINESS & POSITION

Clinical-stage biotech developing EDG-5506, a novel oral myosin inhibitor for rare neuromuscular diseases (Duchenne/Becker muscular dystrophy, other myopathies). Differentiated mechanism in high unmet-need orphan markets with blockbuster potential.

FACTOR & THEME

Biotech sector momentum within Healthcare sector leadership (+12.9% vs SPY). Orphan drug premium, rare disease focus = pricing power and fast regulatory pathways. Clinical binary events create sharp re-ratings.

BREAKOUT SIGNAL

Close above $45.04 on vol 2.35x 20d avg, near 52W high

INSTITUTIONAL

Volume 2.35x on post-earnings move near 52W high signals institutional repositioning ahead of 2027 catalysts. Float 74.3M and $4.93B market cap suggest crossover growth funds are entering. Biotech in Healthcare leadership attracts capital rotation.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported November 4; 15.87% gain suggests cash runway update or clinical trial enrollment milestone beat. Next earnings ~February 2027, but clinical data readouts (not earnings) are the real catalysts for biotech re-ratings.

KEY RISK

Thesis invalid on close below $40.00 (20MA support) or negative clinical trial data. Binary biotech risk: a single adverse Phase 3 readout can erase 50%+ of value overnight. Risk-Off regime increases volatility and de-risks speculative biotech.

ANALYSIS

Strong setup: prox_52w 92.8%, base_tight 3.07 (tightest coil among candidates), Healthcare sector leadership, post-earnings breakout. Disconfirming: RS line NOT at new high (critical A-grade signal missing), and biotech is binary - no Phase 3 readout date provided, so forward catalyst timing is unclear. Risk-Off regime is a headwind. Conviction: Medium - technical quality is high and sector tailwind is strong, but lack of RS new high and binary clinical risk cap conviction.

Signal: Close above $45.04 on vol 2.35x 20d avg, near 52W high

ANALYSIS

CATALYST / TODAY'S DRIVER

27.9% post-earnings surge on November 5 report, likely beat/raise on organ transplant system adoption. Forward catalyst: CMS reimbursement expansion decisions, hospital network adoption acceleration, next earnings ~February 2027, and potential FDA label expansions for additional organs.

BUSINESS & POSITION

Pioneering portable organ perfusion systems (OCS) that extend viable transplant time for hearts, lungs, livers. Disruptive technology expanding donor pool and improving outcomes; high barriers to entry, recurring revenue model from disposables.

FACTOR & THEME

Healthcare innovation within leading sector (+12.9% vs SPY), procedure volume recovery post-pandemic, Medicare/Medicaid reimbursement tailwinds. Demographics (aging, organ shortage) drive secular adoption.

BREAKOUT SIGNAL

Close above $88.24 on vol 4.03x 20d avg, post-earnings breakout

INSTITUTIONAL

Volume 4.03x on 27.9% earnings pop signals institutional block accumulation. INSIDER BUYING: 1 insider bought $109K in last 60 days (cluster score 2) - modest but directionally positive. Tight float (33.6M) amplifies moves; growth-stage medical device attracts crossover funds. Healthcare sector leadership is a magnet for institutional rotation.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported November 5 (yesterday); 27.9% surge indicates substantial beat/raise, likely revenue acceleration or margin expansion. Next print expected February 2027. If guidance was raised materially, durability improves.

KEY RISK

Thesis invalid on close below $75.00 (key support/pivot) or reimbursement setback (CMS rate cut or coverage restriction). Stock still 43% below 52W high ($156) - overhead supply from prior buyers creates resistance. Risk-Off macro is a headwind.

ANALYSIS

27.9% earnings pop + Healthcare sector leadership + 4x volume + insider buying ($109K) = strong setup. Disconfirming: RS vs SPY is only +3.1 (weak relative strength), prox_52w 56.6% means still far from highs (overhead supply), RS line NOT at new high, and base_tight 5.52 is wide. Risk-Off regime kills most breakouts. Insider buy is small (1 person, $109K). Conviction: Medium - earnings catalyst is strong and sector is leading, but RS weakness and distance from highs limit follow-through odds.

Signal: Close above $88.24 on vol 4.03x 20d avg, post-earnings

ANALYSIS

CATALYST / TODAY'S DRIVER

14.2% breakout on likely partnership, product win, or analyst upgrade (no earnings today). Forward catalyst: next earnings January 27, 2027 (82 days), Q4 enterprise IT budget flush, and potential AI-driven data center networking wins as hyperscalers expand.

BUSINESS & POSITION

Enterprise networking equipment (Wi-Fi 6/7, cloud-managed switching) competing with Cisco/Arista in mid-market. Benefits from hybrid work, campus network upgrades, and AI infrastructure edge connectivity buildouts.

FACTOR & THEME

AI infrastructure (edge networking for distributed AI workloads), enterprise IT modernization, cloud-managed network shift. Exposure to corporate capex recovery if Risk-Off eases.

BREAKOUT SIGNAL

Close above $24.03 on vol 3.29x 20d avg, breakout from base

INSTITUTIONAL

Volume 3.29x suggests institutional buying but not at A-grade threshold (>4x). Float 127.1M is large - liquidity for funds but harder to move. No insider buying. RS vs SPY +4.9 is modest; not leading the market strongly.

EARNINGS

EARNINGS IN 82D

EARNINGS CONTEXT

Next earnings January 27, 2027 (82 days out). No immediate catalyst visibility until then unless contract/partnership announcements emerge. Earnings are far enough away that current move needs interim catalysts to sustain.

KEY RISK

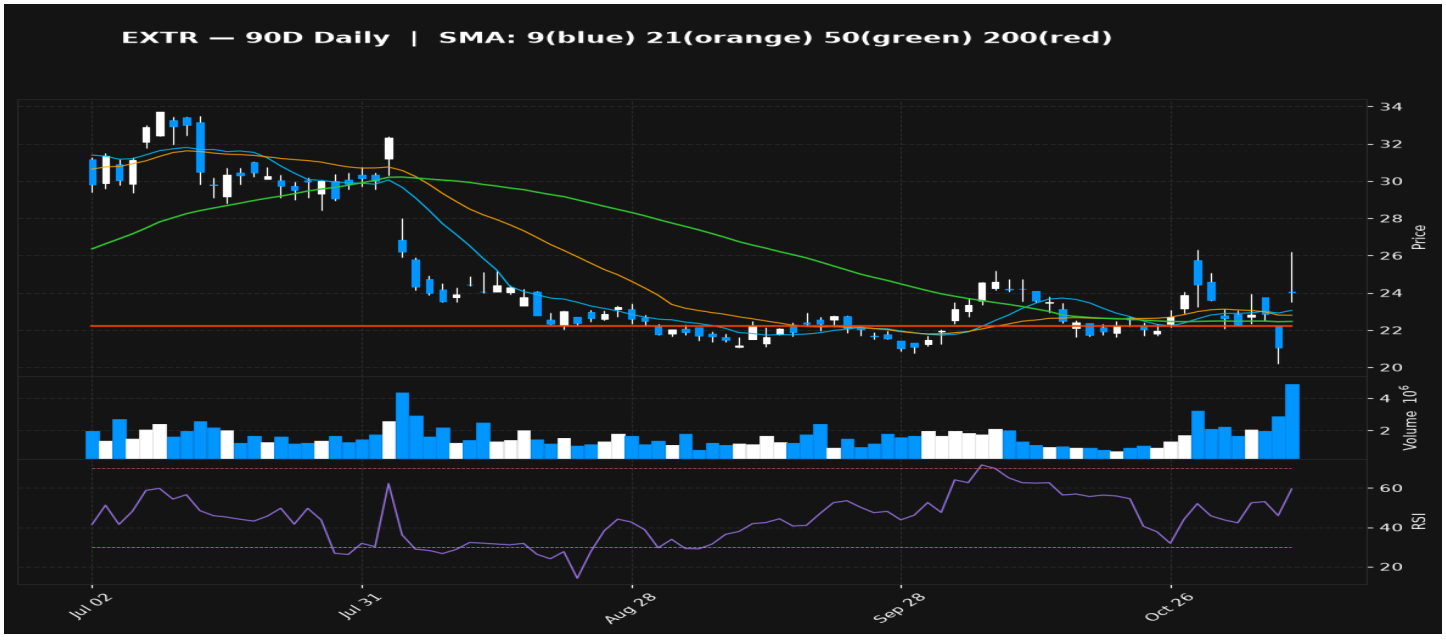

Thesis invalid on close below $21.50 (prior pivot/support) or weak enterprise spending commentary before January earnings. Communication equipment is cyclical; macro deterioration kills capex. Risk-Off is a headwind.

ANALYSIS

Solid technical setup: prox_52w 71.2%, base_tight 2.86 (cleanest coil among non-Healthcare names), vol 3.29x, RS +4.9. Disconfirming: RS line NOT at new high, no earnings catalyst for 82 days (long time with no visibility), and Risk-Off regime kills most breakouts. Large float (127M) reduces volatility upside. No insider buying. Conviction: Low-Medium - clean coil and volume are positives, but lack of near-term catalyst, weak RS, and macro headwind make this a watch for now unless interim news emerges.

Signal: Close above $24.03 on vol 3.29x 20d avg, breakout from

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings breakout on November 4 report (87.9% of 52W high), likely beat/backlog growth. Forward catalyst: federal infrastructure awards under IIJA (ongoing through 2027-2028), next earnings ~February 2027, and potential large project wins (transit, water, civil).

BUSINESS & POSITION

Large civil construction contractor focused on infrastructure (tunnels, mass transit, water systems). Primary beneficiary of IIJA (Infrastructure Investment and Jobs Act) multi-year federal/state spending wave.

FACTOR & THEME

Infrastructure spending (IIJA, state budgets), reshoring construction demand, public works backlog. Counter-cyclical government spending provides defensiveness in Risk-Off but long project cycles and low margins are headwinds.

BREAKOUT SIGNAL

Close above $89.89 on vol 2.41x 20d avg, near 52W high

INSTITUTIONAL

Volume 2.41x on post-earnings move to 87.9% of 52W high signals moderate institutional interest. No insider buying. Float 47.3M is moderate. Engineering & construction is not a momentum sector - typically value/turnaround capital, not growth funds.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported November 4; 9.82% gain suggests beat/backlog growth or margin improvement. Next print expected February 2027. Construction is lumpy - quarterly results volatile based on project milestones.

KEY RISK

Thesis invalid on close below $82.00 (prior resistance) or project delay/cost overrun disclosure. Construction has low margins and execution risk; one bad project can wipe out a year of earnings. RS vs SPY is negative (-3.4), signaling underperformance. Risk-Off is a headwind.

ANALYSIS

Disconfirming: RS vs SPY is -3.4 (underperforming market), RS line NOT at new high, construction is low-margin/high-execution-risk sector not favored by momentum capital, and Risk-Off regime kills most breakouts. Positive: prox_52w 87.9% (near highs), base_tight 3.34, and IIJA multi-year tailwind. Conviction: Low - infrastructure theme is durable but RS weakness, sector quality, and macro headwind make follow-through uncertain. This is a value/turnaround play, not a momentum leader.

Signal: Close above $89.89 on vol 2.41x 20d avg, near 52W high

ANALYSIS

CATALYST / TODAY'S DRIVER

17.3% surge on earnings day (today, November 6), likely cash update or clinical trial progress. Forward catalyst: Phase 3 data readout for cretostimogene (bladder cancer), potential BLA filing 2027, partnership/licensing deals, and next earnings ~February 2027. Clinical milestones are the real drivers.

BUSINESS & POSITION

Clinical-stage oncolytic immunotherapy company developing cretostimogene for non-muscle invasive bladder cancer (NMIBC). Differentiated mechanism in large unmet-need market; potential blockbuster if Phase 3 succeeds.

FACTOR & THEME

Biotech oncology within Healthcare sector leadership (+12.9% vs SPY), immunotherapy innovation, orphan/niche cancer focus. Clinical binary events drive sharp re-ratings. Risk-Off regime is a headwind for speculative biotech.

BREAKOUT SIGNAL

Close above $75.99 on vol 3.98x 20d avg, earnings day breakout

INSTITUTIONAL

Volume 3.98x on earnings day surge to 93.8% of 52W high signals institutional repositioning. Float 68.3M and $6.74B market cap suggest large-cap biotech funds entering. No insider buying. Healthcare sector leadership attracts capital rotation.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Earnings today (November 6); 17.3% gain suggests positive cash runway update or clinical milestone disclosure. Next earnings ~February 2027, but clinical data readouts (not earnings) are key catalysts for biotech.

KEY RISK

Thesis invalid on close below $68.00 (support) or negative Phase 3 data. Binary biotech risk: a single adverse readout can erase 40-60% overnight. No Phase 3 data date provided, so forward catalyst timing is unclear. Risk-Off regime increases volatility and de-risks speculative names.

ANALYSIS

Strong setup: prox_52w 93.8% (near highs), vol 3.98x, Healthcare sector leadership, earnings day breakout. Disconfirming: RS line NOT at new high (critical A-grade signal missing), RS vs SPY only +3.0 (weak relative strength), base_tight 4.38 is loose, no insider buying, and biotech is binary with no specific Phase 3 date provided. Risk-Off regime is a major headwind for speculative biotech. Conviction: Low-Medium - sector tailwind and proximity to highs are positives, but lack of RS new high, weak RS, and binary clinical risk without clear timing cap conviction.

Signal: Close above $75.99 on vol 3.98x 20d avg, earnings day b

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings 7.1% move on November 5 report, likely beat/ARR growth. Forward catalyst: next earnings ~February 2027, NRF/restaurant industry conferences Q1 2027, and potential large chain contract wins (PAR serves QSR/fast-casual with POS/back-office SaaS).

BUSINESS & POSITION

Cloud-based point-of-sale and restaurant management software for quick-service and fast-casual chains. Recurring SaaS model with high switching costs; benefits from restaurant tech modernization and labor automation.

FACTOR & THEME

SaaS/software within restaurant tech modernization wave, labor automation (kiosk, mobile ordering), SMB digitization. Consumer spending exposure (restaurants cyclical) is a headwind in Risk-Off.

BREAKOUT SIGNAL

Close above $20.55 on vol 3.18x 20d avg, post-earnings move

INSTITUTIONAL

Volume 3.18x on post-earnings move suggests institutional interest. Tight float (32.6M) amplifies moves. No insider buying. Small-cap SaaS with high growth rates attracts crossover growth funds if execution continues.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported November 5; 7.14% gain suggests beat/ARR growth acceleration. Next print expected February 2027. SaaS metrics (ARR, net revenue retention, churn) matter more than GAAP earnings for valuation.

KEY RISK

Thesis invalid on close below $18.50 (support/pivot) or churn acceleration/ARR deceleration at next earnings. Restaurant spending is cyclical; macro downturn kills new store openings and tech budgets. Stock is 49% below 52W high - overhead supply risk. Risk-Off is a headwind.

ANALYSIS

Positive: RS vs SPY +22.2 (strong relative strength), vol 3.18x, tight float (32.6M), SaaS model with recurring revenue. Disconfirming: prox_52w only 50.7% (still 49% below highs, major overhead supply), RS line NOT at new high, base_tight 4.07 is loose, no insider buying, and restaurant/consumer exposure is cyclical headwind in Risk-Off. Conviction: Low-Medium - RS strength and SaaS model are positives, but distance from highs, lack of RS new high, and macro/sector headwinds limit follow-through odds.

Signal: Close above $20.55 on vol 3.18x 20d avg, post-earnings

Vol vs Avg: 3.18x
