ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout to new 52W high on 8% surge following post-earnings re-rating momentum (reported Aug 3). Forward catalyst: November 5 earnings print with potential for guidance raise as single-cell genomics adoption accelerates in pharma/biotech R&D.

BUSINESS & POSITION

10x Genomics provides single-cell and spatial genomics platforms used in drug discovery, oncology research, and immunology. The company is a category leader in spatial biology tools, capturing secular growth as pharma moves from bulk to single-cell resolution in drug development.

FACTOR & THEME

Biotech R&D tools, AI-driven drug discovery (spatial data feeds machine learning models), precision medicine. Theme momentum accelerating as AI pharma spend increases and spatial biology becomes standard in clinical trials.

BREAKOUT SIGNAL

Close above \$56.19 on vol >1.62x of 20d avg

INSTITUTIONAL

Volume 1.62x (below institutional breakout threshold of 2x) and no insider buying in last 90 days. RS of +169% vs SPY over 12 weeks is extreme-suggests strong fund positioning but crowding risk. Large float (117M) requires sustained institutional flow.

EARNINGS

EARNINGS IN 87D

EARNINGS CONTEXT

Reported August 3 (7 days ago). Next print November 5. No consensus data provided; prior quarter likely beat given the subsequent 300%+ rally from \$11 lows. Serial beat history would be critical to confirm re-rating sustainability.

KEY RISK

Thesis invalid on close below \$50 (prior resistance) or any revenue guidance cut at November 5 print. Extreme RS (+169%) makes this vulnerable to mean reversion if biotech funding deteriorates.

ANALYSIS

Strongest disconfirming evidence: volume at only 1.62x lacks institutional urgency, RS line NOT at new high despite price at 52W high (divergence), and base_tight of 3.36 is loose for a textbook setup. However, +169% RS is top-tier leadership, Healthcare sector is leading (+5.8%), and prox_52w at 99.4% confirms breakout. Missing the 2x vol threshold and rs_line_new_high downgrades from A. Crowding risk at these levels. Conviction: Medium.

Signal: Close above \$56.19 on vol >1.62x of 20d avg

Vol vs Avg: 1.62x

ANALYSIS
CATALYST / TODAY'S DRIVER
Post-earnings momentum from August 3 report driving breakout toward 52W high. Forward catalyst: synthetic DNA demand acceleration in biopharma (antibody discovery, gene therapy), next earnings not until Q4 but potential contract wins or partnership announcements in synthetic biology space.
BUSINESS & POSITION
Twist manufactures synthetic DNA at scale using silicon-based synthesis, serving pharma, industrial biotech, and data storage markets. Leader in DNA synthesis cost-per-base and throughput, with increasing share in antibody discovery and gene therapy applications.
FACTOR & THEME
Biotech tools, AI drug discovery (synthetic DNA libraries power computational screening), data storage (DNA as archival medium). Theme momentum high as AI pharma and gene therapy funding remain robust despite broader biotech volatility.
BREAKOUT SIGNAL
Close above \$123.17 on vol >1.75x of 20d avg
INSTITUTIONAL
Volume 1.75x is below breakout standard but RS of +114% vs SPY is elite leadership. No insider buying in 90 days. Smaller float (55M) vs TXG aids technical momentum but Healthcare sector tailwind (+5.8%) supports continuation. Lack of 2x vol suggests controlled move, not capitulation.
EARNINGS
REPORTED
EARNINGS CONTEXT
Reported August 3 (7 days ago). Beat/miss history and consensus for next quarter unavailable. The 400%+ rally from \$23 lows implies serial beats or major contract wins-would need to verify EPS surprise history to assess re-rating durability.
KEY RISK
Thesis invalid on close below \$110 (round number support) or any dilution announcement. Base_tight of 4.86 is wide-stock could consolidate 10-15% before next leg. Pre-revenue or low-margin profile means cash burn is key risk.
ANALYSIS
Strongest disconfirming evidence: volume 1.75x and rs_line_new_high = false downgrade this from A despite +114% RS and 98.9% prox_52w. Base is wide (4.86) and stock is post-earnings with no near-term catalyst visible until Q4. Healthcare sector leadership (+5.8%) and extreme RS provide tailwind, but missing two key technical criteria (2x vol, RS line new high) and lacking a forward catalyst path within 8-12 weeks limit conviction. Conviction: Medium.
Signal: Close above \$123.17 on vol >1.75x of 20d avg
Vol vs Avg: 1.75x

Security & Protection Services | Theme: Private Prisons | 52W Hi: 97% | Base Tight: 1.33 | Vol: 1.62x | RS/SPY: +41.6% | Above 20MA: YES | EARNINGS IN 87D

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout to 97% of 52W high from a textbook VCP base (base_tight 1.33). Forward catalyst: November 5 earnings with potential for contract renewals/expansions under current administration immigration policy, plus REIT dividend increases as leverage declines.

BUSINESS & POSITION

Geo Group operates private prisons and detention facilities under federal and state contracts, primarily ICE and BOP. Benefiting from immigration enforcement policy and facility capacity shortages; REIT structure offers yield appeal.

FACTOR & THEME

Government services, immigration policy tailwind. Theme momentum tied to political cycle and border enforcement intensity-currently stable but binary to policy shifts. Not a secular growth theme but a cyclical policy play.

BREAKOUT SIGNAL

Close above \$31.37 on vol >1.62x of 20d avg

INSTITUTIONAL

Volume 1.62x is modest but base_tight of 1.33 is elite (textbook VCP coil). No insider buying in 90 days. Large float (113M) and REIT structure attract income funds, but controversial industry limits broad institutional ownership. Float rotation on policy-driven narratives.

EARNINGS

EARNINGS IN 87D

EARNINGS CONTEXT

Next earnings November 5 (87 days). Consensus unavailable but focus will be contract renewal guidance and occupancy rates. Beat history would determine if this is a serial re-rater or one-time policy bounce.

KEY RISK

Thesis invalid on close below \$29 (prior resistance) or any contract loss/non-renewal at earnings. Binary political risk: policy reversal on immigration enforcement kills the thesis. Base breakout at \$31.37 is clean but needs to hold above \$30.

ANALYSIS

Strongest disconfirming evidence: volume only 1.62x and RS line not at new high despite 97.3% prox_52w. However, base_tight of 1.33 is the tightest in the entire scan-this is a Qullamaggie-grade VCP coil indicating professional accumulation. RS +41.6% is solid but not elite. Lack of sector tailwind (Industrials not leading) and binary policy risk limit conviction, but technical quality is institutional-grade. Conviction: Medium.

Signal: Close above \$31.37 on vol >1.62x of 20d avg

Vol vs Avg: 1.62x

ANALYSIS
CATALYST / TODAY'S DRIVER
Breakout to new 52W high on 12.9% surge, likely tied to specialty lubricants/petrochemicals margin expansion or renewable diesel progress. Forward catalyst: November 6 earnings with focus on Montana renewable diesel ramp and specialty product pricing.
BUSINESS & POSITION
Calumet produces specialty hydrocarbon products (lubricants, solvents, waxes) and is transitioning into renewable diesel. Niche player in high-margin specialty petrochemicals with improving capital structure post-restructuring.
FACTOR & THEME
Energy transition (renewable diesel), industrial chemicals recovery, potential beneficiary of reshoring (specialty lubricants for domestic manufacturing). Materials sector is leading (+4.6%), providing macro tailwind.
BREAKOUT SIGNAL
Close above \$44.59 on vol >2.39x of 20d avg
INSTITUTIONAL
Volume 2.39x and prox_52w 98.7% confirm breakout momentum. No insider buying in 90 days. Smaller float (58M) aids squeeze potential. Base_tight of 2.57 is borderline (>2.0 but <3.0)-acceptable for a commodity-linked name. Materials sector leadership (+4.6%) supports institutional appetite.
EARNINGS
EARNINGS IN 88D
EARNINGS CONTEXT
Next earnings November 6 (88 days). Consensus unavailable. Key metrics: renewable diesel volumes, specialty product margins, and debt reduction progress. Need to verify if this is a turnaround story or cyclical bounce.
KEY RISK
Thesis invalid on close below \$40 (round number) or any guidance miss/capex delay on renewable diesel at November print. Commodity exposure means margin volatility; crack spread compression kills the thesis.
ANALYSIS
Strongest disconfirming evidence: RS line not at new high and base_tight of 2.57 is above the ideal <2.0 threshold. However, volume at 2.39x, 12.9% breakout move, 98.7% prox_52w, and Materials sector leadership (+4.6%) are all A-grade signals. Missing rs_line_new_high and RS +33% (good but not elite) downgrade from A. Small float and sector tailwind provide follow-through potential into November earnings. Conviction: Medium.
Signal: Close above \$44.59 on vol >2.39x of 20d avg
Vol vs Avg: 2.39x

Diagnostics & Research | Theme: Outpatient Imaging | 52W Hi: 89% | Base Tight: 4.24 | Vol: 2.29x | RS/SPY: +31.1% | Above 20MA: YES | EARNINGS IN 87D

Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	-(data lag)

ANALYSIS

CATALYST / TODAY'S DRIVER

5% move toward breakout zone (88.6% of 52W high), likely driven by imaging volume recovery and AI radiology adoption. Forward catalyst: November 5 earnings with focus on same-store imaging volumes, AI software rollout (DeepHealth), and M&A pipeline.

BUSINESS & POSITION

RadNet operates the largest U.S. outpatient imaging center network, providing MRI, CT, PET, and mammography. Benefiting from shift to outpatient settings and AI-assisted radiology improving throughput and margins.

FACTOR & THEME

Healthcare services recovery, AI in diagnostics (DeepHealth AI platform), outpatient shift. Healthcare sector leading (+5.8%) and diagnostic imaging has structural tailwinds from aging demographics and early cancer screening adoption.

BREAKOUT SIGNAL

Close above \$76.05 on vol >2.29x of 20d avg

INSTITUTIONAL

Volume 2.29x confirms institutional interest. No insider buying in 90 days. Base_tight of 4.24 is loose but acceptable for healthcare services (less technical than biotech). Healthcare sector leadership (+5.8%) is strongest tailwind in current regime. Float (66M) is moderate.

EARNINGS

EARNINGS IN 87D

EARNINGS CONTEXT

Next earnings November 5 (87 days). Consensus unavailable. Key focus: imaging center same-store growth, DeepHealth AI adoption rates, and guidance for 2027 after recent M&A integrations. Serial beat history would support re-rating.

KEY RISK

Thesis invalid on close below \$72 (prior consolidation support) or any same-store volume miss at November print. Outpatient imaging is commoditized-margin pressure from payer reimbursement cuts is key risk.

ANALYSIS

Strongest disconfirming evidence: prox_52w at 88.6% is in breakout zone but not yet at new high, RS line not at new high, and base_tight of 4.24 is wide. However, volume 2.29x and Healthcare sector leadership (+5.8%) are strong positives. RS +31% is solid but not elite. This is a sector-driven setup more than a company-specific inflection-needs to prove it can break to new highs. Conviction: Medium.

Signal: Close above \$76.05 on vol >2.29x of 20d avg

Vol vs Avg: 2.29x
