CATALYST INTELLIGENCE

EARNINGS

Oct 29 - Reported 14 days ago. TTM EPS $4.35, forward EPS $5.17 implies 19% growth. The 615% Y/Y earnings growth reflects easy comps and margin recovery. Revenue down 8.6% Y/Y reflects premium runoff but earnings power expanding through expense discipline and investment income.

BUSINESS & POSITION

CNO Financial provides life insurance, annuities, and supplemental health products primarily to middle-income Americans through its Bankers Life, Washington National, and Colonial Penn divisions. The company operates as a niche leader in the underserved middle-market segment with a captive agent distribution model.

FACTOR & THEME

Exposure to interest rate normalization (higher rates = better spread income), aging demographics driving annuity demand, and potential Medicare supplement tailwinds. Healthcare sector is leading (+6.6% 20d) which supports related insurance names; sentiment is constructive but not euphoric.

NEWS FLOW

Post-earnings consolidation with RS line at new highs suggests institutional acceptance of results. No major contract wins or regulatory events in the last 60 days. Industry catalyst: Insurance sector benefiting from elevated rate environment and aging baby boomer demographic driving annuity sales. Impact: Industry / Medium.

INSTITUTIONAL

Volume dry-up from 1.02M to 591K (42% contraction) with price holding within 3% of highs indicates quiet accumulation. Institutional ownership data unavailable from this feed. No insider buying in last 60 days - neutral signal for a mature financial. The tight coil near 52W highs with RS confirmation suggests smart money positioning ahead of potential breakout.

KEY RISK

Thesis invalid on a close below the $55.15 base low (4% risk), or if interest rates decline sharply compressing net investment income spreads. High debt/equity of 207% is typical for insurers but limits financial flexibility. Short interest negligible at 0%.

RS line at new high is the strongest confirmatory signal, but base_tight at 3.97 is loose for an A-grade and vol_dryup_strict is false (vol_w2 > vol_w3 but vol_w3 < vol_w1). The 3% proximity to pivot is attractive. Strongest disconfirming argument: revenue decline of 8.6% and analyst price target of $56.75 below current price suggests limited institutional enthusiasm. Mixed regime with small-cap leadership is supportive. Conviction: Medium.

Close above $109.00 on volume >200% of 20-day avg (>660K shares) post-earnings

Target: $127.00 - analyst consensus and measured move confluence

Stop: $95.00 - below base structure and psychological support

CATALYST INTELLIGENCE

EARNINGS

Nov 17 - Earnings in 5 days - HIGH IMPACT catalyst. Forward EPS $6.10 vs TTM $4.64 implies 31% growth. PEG of 0.54 is attractive for growth profile. Revenue growth +7% with strong gross margins (41.3%) and operating leverage. Beat history not confirmed but Street target $126.86 implies 16%+ upside.

BUSINESS & POSITION

Griffon operates through two segments: Home & Building Products (garage doors, rolling steel doors under Clopay brand) and Consumer & Professional Products (AMES tools, lawn care). Category leader in residential garage doors with ~50% market share, benefiting from home improvement spending and reshoring of manufacturing.

FACTOR & THEME

Exposure to housing recovery, reshoring/infrastructure spending, and consumer durables cycle. Real Estate sector leading (+6.2% 20d) provides indirect tailwind through housing-related demand. Building products sentiment constructive as rates stabilize.

NEWS FLOW

Earnings catalyst in 5 days provides near-term binary event. RS line at new high despite price below MAs suggests relative strength building. No recent M&A or contract news but housing-related names seeing bid. Impact: Earnings / High.

INSTITUTIONAL

Volume contraction from 326K to 266K (18%) is modest but directionally correct. Institutional ownership data unavailable from this feed. No insider buying in last 60 days. Float of 42.3M with $4.8B market cap suggests adequate liquidity. High debt/equity (1035%) reflects LBO-style capital structure - watch leverage in rising rate environment.

KEY RISK

Thesis invalid on a close below $95.00 (base low) or on earnings miss/guide-down at Nov 17 print. High financial leverage (D/E 1035%) creates vulnerability if housing demand softens. 5% short interest with 3.9 days-to-cover is manageable.

RS line at new high is strong signal, and 5-day earnings catalyst provides asymmetric setup opportunity. However, base_tight at 4.63 is loose, price NaN prevents verification, and below both MAs. The PEG of 0.54 is compelling value if growth materializes. Strongest disconfirming argument: extreme leverage (D/E 1035%) magnifies downside on any demand softness. Real Estate sector leadership provides thematic tailwind. Conviction: Medium.

ENTRY TRIGGER

Close above $32.41 on volume >150% of 20-day avg (>1.32M shares)

Target: $36.50 - measured move to prior 52W high resistance

Stop: $28.50 - below base low and psychological support

CATALYST INTELLIGENCE

EARNINGS

Jan 21 - Earnings 70 days out - no near-term catalyst. TTM EPS $2.02, forward $2.13 (+5%). Revenue growth +25.8% and earnings growth +44% are strong but forward estimates suggest deceleration. P/E of 15x reasonable for quality regional bank.

BUSINESS & POSITION

First Financial operates 79 banking locations across Texas, focusing on commercial and consumer banking with strong deposit franchise. Premium regional bank with historically conservative credit culture and high ROE (15.9%). Benefits from Texas economic strength and population growth.

FACTOR & THEME

Exposure to regional bank recovery theme, Texas economic outperformance, and rate environment normalization. Financial Services sector neutral in current regime. Peer read-throughs: regional banks showing mixed action post-Q3 earnings, with quality names separating from weaker credits.

NEWS FLOW

No significant company-specific news in last 60 days. Regional bank theme recovering as rate cut expectations moderate and credit concerns ease for well-managed franchises. Impact: Industry / Low (distant catalyst). INSIDER CLUSTER DETECTED: 4 purchases from 3 distinct insiders totaling $149K in last 60 days - this is a meaningful accumulation signal suggesting internal confidence in near-term outlook.

INSTITUTIONAL

STRONG INSIDER SIGNAL: insider_cluster of 6 reflects 4 open-market purchases by 3 different insiders totaling $149K - a cluster buy that materially upgrades conviction. While no senior officers (C-suite) in the cluster, multiple director-level buys at these levels indicates board-level confidence. Volume dry-up from 1.3M to 676K (48% contraction) with price holding suggests institutional accumulation alongside insider buying. 8.2% short interest with 7.8 days-to-cover creates potential squeeze catalyst if fundamental improvement continues.

KEY RISK

Thesis invalid on a close below $28.50 (near 52W low of $28.12) or on any credit deterioration in Texas commercial real estate exposure. Regional bank sector faces structural headwinds from deposit competition and potential credit normalization. No near-term earnings catalyst (70 days) extends the hold period.

UPGRADE from C to B based on insider_cluster >= 5 (score of 6) with 4 purchases from 3 insiders totaling $149K. Price data NaN and RS line not at new high would normally be C-grade, but insider cluster combined with strict vol dry-up and solid fundamentals (+26% rev, +44% earnings, 16% ROE) warrants upgrade. Strongest disconfirming argument: no catalyst for 70 days and regional bank sector faces structural margin pressure. Small-cap leadership (+4.5% IWM/SPY) is supportive. Conviction: Medium.

Target: $48.00 - measured move based on base depth

Stop: $38.00 - below pivot support zone

CATALYST INTELLIGENCE

EARNINGS

Nov 03 - Reported 9 days ago. TTM EPS $2.44, forward $2.70 (+11%). Earnings growth +160% Y/Y reflects normalization. Revenue +23.5% shows attendance recovery. Analyst target $44.27 implies 6%+ upside from pivot. Strong operating leverage evident in 15% operating margins.

BUSINESS & POSITION

Cinemark is the third-largest movie theater chain in North America with 500+ theaters globally, including strong presence in Latin America. Category follower to AMC and Regal but operationally superior with lower leverage and better unit economics through premium large format and enhanced food/beverage.

FACTOR & THEME

Exposure to consumer discretionary recovery theme - Cons Disc is LEADING sector (+6.7% 20d). Benefits from theatrical window protection and premium format monetization. Sentiment in theatrical exhibition improving as 2026-2027 film slate strengthens post-strikes. Communication Services sector lagging (-3.4%) but CNK trades more with consumer discretionary dynamics.

NEWS FLOW

RS line at new high despite Communications sector weakness suggests company-specific strength. Q4 film slate includes potential blockbusters supporting attendance estimates. Debt/equity 476% reflects pandemic restructuring but manageable with improving cash flows. Impact: Industry / Medium.

INSTITUTIONAL

Volume contraction of only 7.8% is the weakest in the candidate set - this is NOT a clean vol dry-up despite flag being true. Institutional ownership data unavailable. No insider buying in last 60 days. 10.5% short interest with 4.1 days-to-cover creates squeeze potential if theatrical momentum accelerates. Float of 102M provides adequate liquidity.

KEY RISK

Thesis invalid on a close below $38.00 (prior resistance now support) or on theatrical attendance disappointment in Q4 holiday season. Consumer discretionary exposure creates macro sensitivity. Structural bear case: streaming continues to compress theatrical window, limiting long-term multiple expansion.

RS line at new high with Consumer Discretionary sector leadership (+6.7%) is compelling alignment. However, vol contraction of only 7.8% is weak - this is NOT a textbook VCP dry-up despite the flag. Price NaN and below both MAs add uncertainty. Strongest disconfirming argument: theatrical exhibition faces structural headwinds from streaming compression, and high leverage (D/E 476%) limits margin of safety. Conviction: Medium.

CATALYST INTELLIGENCE

EARNINGS

Jan 28

Price NaN, RS not at high, below both MAs. Strong revenue growth (+30.5%) and solid margins but earnings 77 days out - no near-term catalyst. Thin float (16.1M) can accelerate moves but also limits institutional participation. 7.4% short interest manageable. Monitor for setup maturation. Conviction: Low.

CATALYST INTELLIGENCE

EARNINGS

Oct 28

Price NaN, RS not at high, below both MAs, and Technology sector is LAGGING (-7.8% 20d) - significant macro headwind. Forward P/E 61.5x is expensive for negative-earnings company. 11% short interest with 5.1 days-to-cover. Strong vol dry-up (54% contraction) is the only positive. Monitor only until Tech sector rotation improves. Conviction: Low.

CATALYST INTELLIGENCE

EARNINGS

Nov 03

Price NaN, RS not at high, below both MAs. Technology sector LAGGING (-7.8%) is major headwind for cybersecurity names despite secular tailwinds. Negative earnings (TTM -$1.32) and high forward P/E 115x require faith in SaaS transition. Small insider buy ($26K) is noise, not signal. 62% vol contraction is excellent but insufficient to overcome sector drag. Conviction: Low.
