ANALYSIS
CATALYST / TODAY'S DRIVER
A major earnings beat or strategic announcement (likely a partnership, acquisition offer, or material guidance raise) is driving an 80x+ volume surge - the largest in today's scan. At 27.5% up on nearly 81x average volume with a float of only 60.7M shares, this is a full institutional re-rating event, not a technical drift.
BUSINESS & POSITION
LiveRamp is the leading data collaboration and identity resolution platform, enabling brands, agencies, and publishers to activate first-party data across the advertising ecosystem without exposing raw PII. Its Clean Room and RampID infrastructure sits at the center of the cookieless advertising transition, making it effectively a toll road for modern digital marketing data flows.
FACTOR & THEME
Direct exposure to AI-driven data infrastructure and the post-cookie addressable advertising market - both accelerating themes as major platforms deprecate third-party identifiers. LiveRamp benefits from every dollar brands redirect toward first-party data activation, and AI-powered audience modeling amplifies platform stickiness.
BREAKOUT SIGNAL
Close above \$37.50 on vol >5000% of 20d avg confirms institutional re-rating; add on any first constructive pullback to rising 20MA
INSTITUTIONAL
An 81x volume print on a 60.7M float is unambiguously institutional - this is not retail-driven noise. Block prints of this magnitude require multiple large allocators acting simultaneously, consistent with a forced re-rating on a material catalyst. No insider buying is on record in the last 60 days per Form 4 data, but the volume signature itself is the loudest institutional signal in today's entire scan. Institutional ownership data is not available from this feed; recommend cross-referencing 13F filings for current holder composition.
KEY RISK
The base was wide (base_tight 10.34) meaning this move is an explosive breakout from a loose consolidation rather than a textbook VCP - if the catalyst is a one-time event (e.g., acquisition rumor that falls apart), the stock could retrace 15-20% rapidly; mixed macro regime reduces follow-through probability on extended moves.
ANALYSIS
RS line at a 52-week high, prox_52w of 99.8, rs_vs_spy of +42.5, and an 81x volume explosion tick every institutional-quality breakout box simultaneously - this is the highest-conviction technical event in today's scan. The wide base is the sole blemish, but an 80x+ volume surge overrides that concern as a pure re-rating signal; graded A despite mixed macro regime given the magnitude of the move.

ANALYSIS

CATALYST / TODAY'S DRIVER

Technical breakout to a 52-week high (prox_52w 100.1) on 3.3x volume with RS line confirming new highs - this appears to be a clean price breakout from consolidation, potentially reinforced by positive analyst commentary or sector rotation into profitable small-cap industrials. The stock is clearing multi-month resistance with conviction.

BUSINESS & POSITION

Cimpress is the global leader in mass customization of printed products and marketing materials, operating the Vistaprint brand alongside a portfolio of local market printing businesses across Europe and North America. Its competitive moat lies in proprietary manufacturing technology and software that enables cost-effective, high-mix, low-volume production at industrial scale.

FACTOR & THEME

Beneficiary of SMB digital marketing recovery and the broader reshoring/localization of supply chains - as small businesses reinvest in physical marketing materials, Cimpress captures outsized share. The mass customization platform also has emerging AI applications in automated design generation that could expand margins.

BREAKOUT SIGNAL

Close above \$98.50 (52W high) on vol >3x 20d avg confirms breakout; add on first constructive pullback to \$95-96 zone

INSTITUTIONAL

A 3.3x volume breakout on a 13.8M float is highly significant - at this float size, even moderate institutional buying creates outsized price impact. No insider buying is on record in the last 60 days. Institutional ownership data is not available from this feed; recommend 13F cross-reference. The extremely tight float (13.8M) means any sustained institutional accumulation could produce a rapid multi-week move.

KEY RISK

Base_tight of 2.56 is slightly wider than ideal VCP, and at prox_52w 100.1 the stock is right at the breakout point - a failure to hold \$98 would signal a false breakout and trap buyers; mixed macro regime reduces follow-through probability.

ANALYSIS

RS line at a 52-week high, prox_52w at 100.1, rs_vs_spy +26.2, and a tight 13.8M float create a technically compelling setup, but vol_ratio of 3.3x (solid but not explosive) and the slightly wide base (2.56) keep this at B - the extremely tight float is the key amplifier here and warrants close monitoring for follow-through.

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout to a 52-week high on 2.2x volume in the LPG shipping sector, likely driven by tightening VLGC freight rates, improving LPG export demand from the US Gulf Coast, or sector rotation into energy shipping names. Energy is one of the week's leading sectors (+6.9% vs SPY), providing a macro tailwind.

BUSINESS & POSITION

Dorian LPG operates one of the world's largest fleets of Very Large Gas Carriers (VLGCs), transporting liquefied petroleum gas (propane and butane) primarily from US export terminals to Asian markets. Its competitive edge lies in a modern, fuel-efficient fleet that commands premium charter rates and reduced operating costs versus older vessels.

FACTOR & THEME

Direct beneficiary of the US LPG export boom driven by shale gas production and Asian petrochemical demand - a structural multi-year trade flow that is independent of near-term oil price volatility. Energy sector leadership this week (+6.9% vs SPY) provides sector-level tailwind amplification.

BREAKOUT SIGNAL

Close above \$42.10 (52W high) on sustained vol >2x 20d avg confirms breakout; stop below \$40.00

INSTITUTIONAL

Volume at 2.2x on a 36.8M float at a 52-week high is clean institutional accumulation - consistent with fund managers adding to or initiating positions at the breakout level. No insider buying is on record in the last 60 days. Institutional ownership data is not available from this feed; shipping specialists and value-oriented energy funds are the typical holder base for this name.

KEY RISK

LPG freight rates are notoriously cyclical and can reverse sharply on fleet oversupply or reduced Asian import demand; a rate downturn would compress earnings and remove the fundamental thesis supporting the breakout.

ANALYSIS

RS line at 52-week high, prox_52w at 99.9, energy sector leadership tailwind, and a tight base (2.33) form a clean B-grade setup - vol_ratio of 2.2x is sufficient but not explosive, and rs_vs_spy of +10.7 while positive is modest, preventing an A grade; this is a steady, high-quality breakout candidate in a leading sector.

Signal: Close above \$42.10 (52W high) on sustained vol >2x 20d
