Analysis
Catalyst / Today's Driver
Breakout driven by explosive volume (10.6x avg) to new 52W high on RS line confirmation. Forward catalyst: October 26 earnings print offers immediate re-rating opportunity if net interest margin and loan growth continue outperforming peers in the current rate environment.
Business & Position
Capital Bancorp is a Maryland-based regional bank operating through its Capital Bank subsidiary, serving commercial and consumer clients in the DC metro area. The company competes through personalized service and commercial real estate expertise in one of the nation's most affluent markets.
Factor & Theme
Positioned in the regional bank recovery theme as NIM stabilization and commercial real estate normalization drive re-ratings across quality community banks. Benefits from potential Fed easing cycle ahead while maintaining credit discipline through DC metro economic resilience.
Breakout Signal
Close above \$39.26 on vol >1060% of 20d avg
Institutional
Volume surge to 10.6x average on breakout to new highs indicates institutional block activity, not retail. Tiny 10.7M float creates scarcity dynamics-today's turnover represents nearly 10% of the entire float. No insider buying in last 90 days, but the technical signature (RS line new high + massive volume) is textbook institutional markup.
Earnings
Earnings in 26D
Earnings Context
Next print October 26. Consensus estimates not available due to limited coverage (micro-cap regional), but last quarter showed strong NIM expansion and credit quality metrics outperforming peer group. This is a low-analyst-coverage name where beats can drive outsized re-ratings.
Key Risk
Thesis invalid on close below \$36.50 (prior resistance now support), or on any material credit deterioration disclosed at the October 26 earnings that challenges the quality narrative. Wide base (5.18 ATR ratio) suggests prior volatility-needs tight action post-breakout to sustain.
Analysis
RS line new high + explosive volume + 98% of 52W range checks multiple A-grade boxes, but the wide base (5.18 vs. <2 ideal) and mixed macro regime (IWM -5.3% vs SPY) downgrade to strong B. Strongest disconfirming evidence: regional banks face persistent commercial real estate headwinds and rate-cut uncertainty. However, the technical setup is undeniable-institutions are positioning ahead of the Oct 26 catalyst. Conviction: Medium.

ANALYSIS
CATALYST / TODAY'S DRIVER
RS line hitting new high on +21% 12-week outperformance signals early-stage leadership in synthetic biology, likely driven by renewed AI-biotech theme momentum and partnership speculation. Forward catalyst: November 5 earnings with potential contract/partnership announcements as the company shifts from cash-burn concerns to monetization of its platform.
BUSINESS & POSITION
Ginkgo operates a horizontal platform for cell programming and biosecurity, positioning as the 'AWS of biotech'-enabling pharma, agriculture, and industrial customers to engineer organisms for drug production, materials, and diagnostics. The company has pivoted from pandemic biosecurity revenue toward sustainable commercial partnerships.
FACTOR & THEME
Direct exposure to AI-driven drug discovery and synthetic biology, two accelerating themes as pharma embraces computational platforms. Benefits from the same AI infrastructure buildout driving semis-Ginkgo's data moat and automation scale are the 'picks and shovels' for biotech's next decade. Theme momentum is early but accelerating with recent mega-deals in AI-pharma (e.g., Recursion/Nvidia).
BREAKOUT SIGNAL
Close above \$12.50 on vol >233% of 20d avg
INSTITUTIONAL
RS line new high is Qullamaggie's #1 institutional leadership signal-institutions are quietly repositioning despite the stock being 73% off highs. Volume at 2.3x indicates controlled accumulation, not panic buying. No insider buying in last 90 days, but the technical regime change (RS breakout) matters more at this inflection.
EARNINGS
EARNINGS IN 36D
EARNINGS CONTEXT
November 5 print is critical. Ginkgo has missed revenue estimates in recent quarters but guided toward 2026 profitability. Consensus expects continued partnership expansion and narrowing losses. This is a 'show-me' story-any contract win or margin inflection drives violent re-rating given the beaten-down valuation.
KEY RISK
Thesis invalid on close below \$11.50 (20MA support), or on November 5 earnings miss with continued cash burn acceleration and no meaningful new partnerships. Still 27% below 52W high-needs to prove it can hold gains and build a tighter base to attract sustained institutional flows.
ANALYSIS
RS line new high + strong 12-week outperformance (+21%) + AI-biotech theme tailwind = legitimate institutional setup. Disconfirming evidence: wide base (6.64), stock still 27% from highs, and no clear same-day news catalyst. The company remains pre-profitability with execution risk. However, RS leadership in a leading sector (Healthcare via AI crossover) and November earnings as a near-term catalyst justify B-grade. Conviction: Medium.

Analysis
Catalyst / Today's Driver 11% surge on 4.7x volume likely driven by aerospace/defense contract speculation or EV battery materials traction. Forward catalyst: October 29 earnings with potential guidance raise on backlog conversion in high-frequency circuits for 5G/satellite and EV thermal management solutions.
Business & Position Rogers is a specialty materials supplier for advanced electronics, producing high-frequency circuit laminates for aerospace/defense, automotive EV power systems, and next-gen connectivity (5G, satellite). The company commands pricing power in niche, mission-critical applications where performance trumps cost.
Factor & Theme Triple exposure: defense spending (high-frequency radar/comm systems), EV adoption (battery thermal management), and space economy (satellite constellations). All three themes remain structurally accelerating despite near-term macro chop. Technology sector leadership (+6.9% this week) provides favorable backdrop.
Breakout Signal Close above \$150.50 on vol >467% of 20d avg
Institutional Volume spike to 4.7x on a clean 11% move suggests institutional buying, not retail chasing. Small 16.8M float means block trades move the stock-today's action likely reflects a growth fund initiating or adding. No insider buying in last 90 days, but the volume signature is compelling. Sector rotation into Technology tailwinds this further.
Earnings Earnings in 29D
Earnings Context October 29 print. Rogers has beaten revenue estimates in 3 of last 4 quarters, with aerospace/defense and EV segments offsetting consumer electronics softness. Consensus expects mid-single-digit revenue growth and margin expansion from higher-value product mix. Serial beater status gives earnings asymmetry.
Key Risk Thesis invalid on close back below \$145 (prior consolidation high), or on October 29 miss with aerospace/defense order pushouts. Stock is 10% from 52W high but base is wide (4.22)-needs tighter action into earnings to avoid volatile whipsaw.
Analysis High volume (4.7x) + Technology sector leadership + 91% proximity to highs + October 29 catalyst = strong setup. Disconfirming evidence: RS line NOT at new high (critical A-grade signal missing), RS vs SPY modest at +3.9, and wide base. The lack of RS confirmation downgrades from A despite otherwise solid technicals. In Technology's leadership week, this deserves institutional attention. Conviction: Medium.

ANALYSIS
CATALYST / TODAY'S DRIVER
RS line new high + 99% of 52W range signals institutional accumulation of this telecom/fintech hybrid, likely driven by Boss Revolution remittance growth and NRS telecom margin expansion. Forward catalyst: December 3 earnings (64 days out) offers re-rating opportunity, but nearer-term catalyst is unclear-this is a technical breakout ahead of fundamentals.
BUSINESS & POSITION
IDT operates a diversified telecom and fintech portfolio, including Boss Revolution (international calling/remittance for diaspora communities), NRS (carrier services), and net2phone (cloud UCaaS). The company has pivoted from legacy telecom toward high-margin fintech and SaaS, driving margin expansion.
FACTOR & THEME
Exposure to remittance growth (diaspora demographics), cloud communications adoption, and international connectivity. These are steady secular trends but not currently high-velocity themes. Telecom Services is underperforming (-0.9% vs SPY this week), creating sector headwind despite individual RS strength.
BREAKOUT SIGNAL
Close above \$79.00 on vol >191% of 20d avg
INSTITUTIONAL
RS line new high + 33% 12-week outperformance vs SPY + 1.9x volume = textbook Qullamaggie early leader signal. Institutions are positioning in a low-coverage, under-owned name (20M float creates scarcity). No insider buying in last 90 days. The technical setup is pristine despite the sector being out of favor.
EARNINGS
EARNINGS IN 64D
EARNINGS CONTEXT
December 3 print. IDT has beaten EPS estimates in recent quarters on Boss Revolution user growth and NRS margin expansion. Consensus expects continued fintech segment momentum. This is a low-expectations name where beats drive outsized moves.
KEY RISK
Thesis invalid on close below \$75 (prior consolidation), or on any competitive pressure in remittance (from Wise, Remitly) disclosed at December earnings. Wide base (4.99) and sector underperformance create volatility risk. Catalyst gap (64 days to earnings) means momentum must be self-sustaining.
ANALYSIS
RS line new high + extreme proximity to 52W high (99%) + strong RS (+32.9) checks A-grade boxes, but wide base (4.99), Communications sector underperformance, and 64-day catalyst gap downgrade to B. Disconfirming evidence: sector is lagging, and no clear near-term fundamental driver exists. However, the technical leadership is undeniable-this is an early-stage institutional accumulation ahead of the December print. Conviction: Medium.

Analysis
Catalyst / Today's Driver 10% surge on 2x volume near 52W high suggests clinical trial data anticipation or partnership rumors for EP-104IAR (extended-release arthritis pain treatment). Forward catalyst: November 3 earnings may include Phase 2b readout timing or partnership updates; FDA milestones in 2027 are the durable drivers.
Business & Position Eupraxia is a clinical-stage biotech developing long-acting therapies for chronic pain and inflammatory conditions, using its proprietary Diffusphere platform. Lead candidate EP-104IAR targets osteoarthritis pain with extended-release corticosteroid injections, addressing a \$3B+ market with minimal competition in the long-acting segment.
Factor & Theme Taps chronic pain innovation and non-opioid alternatives, a durable theme post-opioid crisis. However, Healthcare sector is underperforming (-2.1% vs SPY this week), creating headwind. Biotech has seen renewed interest in differentiated, de-risked clinical assets, and Eupraxia's Diffusphere platform offers pipeline optionality beyond lead asset.
Breakout Signal Close above \$9.00 on vol >199% of 20d avg
Institutional Volume at 2x on a tight base (2.37) and strong RS (+33.5) suggests controlled accumulation ahead of catalysts. However, RS line is NOT at new high despite 98% proximity-this indicates prior holders distributing into the move, not pure institutional markup. No insider buying in last 90 days is a yellow flag for a clinical-stage name.
Earnings Earnings in 34D
Earnings Context November 3 print. As a clinical-stage company, financials are less relevant than pipeline updates. Expect cash runway discussion and EP-104IAR trial enrollment/data timing. Any partnership or licensing deal announcement would re-rate the stock violently given the small cap.
Key Risk Thesis invalid on close below \$8.50 (breakout support), or on any EP-104IAR trial delay or safety signal disclosed at November 3 update. Clinical-stage biotech carries binary risk-trial failure or partnership collapse would crater the stock. Lack of insider buying in a catalyst-rich period is concerning.
Analysis Strong RS (+33.5), tight base (2.37), 98% of 52W high, and November 3 catalyst = solid setup. Disconfirming evidence: RS line NOT at new high (A-grade signal missing), Healthcare sector underperforming, and no insider buying despite being catalyst-rich. The lack of RS confirmation and sector headwind prevent A-grade despite otherwise compelling technicals. Conviction: Medium.
Signal: Close above \$9.00 on vol >199% of 20d avg Vol vs Avg: 2.0x
