ENTRY TRIGGER

Close above $11.12 on volume >150% of 20-day avg (>1.9M shares)

Target: $13.50 - measured move based on base depth of ~$2.40 added to pivot, representing 21% upside

Stop: $9.50 - below base low and 50-day MA, invalidates the VCP structure

CATALYST INTELLIGENCE

EARNINGS

Oct 27 - Earnings TODAY - Street expects ~$0.07 EPS on ~$450M revenue. Forward EPS of $0.29 implies significant earnings inflection; company has shown 650% y/y earnings growth trajectory. Beat history shows volatility but recent quarters have surprised positively on volume/pricing dynamics in coke contracts.

BUSINESS & POSITION

SunCoke Energy is the largest independent producer of coke in the Americas, providing metallurgical coke to integrated steel producers through long-term take-or-pay contracts. The company also operates logistics terminals handling coal, iron ore, and other bulk materials, creating a vertically-integrated steel supply chain infrastructure business.

FACTOR & THEME

Directly tied to domestic steel production, infrastructure spending via IIJA tailwinds, and reshoring themes driving U.S. steel demand. Energy sector is the leading sector over the trailing 20 days (+10.9%), providing strong macro tailwind for Basic Materials adjacent plays.

NEWS FLOW

Steel fundamentals remain constructive with integrated mills maintaining utilization above 75%. Long-term contracts with ArcelorMittal and U.S. Steel provide revenue visibility. No recent M&A or major contract announcements, but logistics segment has seen incremental volume growth. Catalyst Type: Earnings (High Impact) - same-day print creates immediate catalyst with vol dry-up into the event.

INSTITUTIONAL

Volume dry-up into earnings (910K vs 1.09M three weeks ago) with RS line at new highs suggests quiet institutional accumulation ahead of the print. Low float (84M) combined with 5% short interest creates potential for sharp move on any beat-and-raise scenario. No insider buying in the last 60 days - neutral signal but not disqualifying given the technical strength.

KEY RISK

Thesis invalid on a close below $9.50 (base low and 50-day MA zone), or on an earnings miss/guide-down tonight that breaks the accumulation pattern. Steel cycle is the primary fundamental risk - any ISM manufacturing print below 48 or integrated mill curtailments would pressure coke demand.

Textbook RS line at new high with confirmed vol dry-up, but base_tight at 3.49 is looser than A-grade standards and earnings catalyst is binary (same-day). Energy sector leadership provides macro tailwind. Disconfirming argument: steel cycle may be peaking with forward EV/EBITDA of 6.5x not pricing in any cyclical downturn - a miss tonight unwinds the entire setup. Conviction: Medium

ENTRY TRIGGER

Close above $14.19 on volume >175% of 20-day avg (>720K shares)

Target: $17.50 - measured move from base depth (~$2.80) plus pivot, with resistance confluence near prior highs

Stop: $12.80 - below base low, invalidates VCP structure

CATALYST INTELLIGENCE

EARNINGS

Nov 09 - Street expects ~$0.15 EPS on ~$85M revenue. Forward P/E of 18x with 33.9% revenue growth implies reasonable PEG of 0.96. Company has shown improving operating leverage - tracking toward profitability inflection. Beat pattern has been mixed but recent quarters showed revenue acceleration.

BUSINESS & POSITION

Viant operates an omnichannel demand-side platform (DSP) enabling advertisers to plan, execute, and measure digital campaigns across connected TV, mobile, desktop, and audio. The company's proprietary Household ID technology provides cookie-less identity resolution, positioning it for the post-third-party-cookie advertising landscape.

FACTOR & THEME

Exposure to digital advertising recovery cycle and AI/ML themes through programmatic optimization. However, Technology sector is lagging (-3.2% over 20 days) creating a headwind. Connected TV and retail media network themes are accelerating within adtech, with peers like TTD showing resilience.

NEWS FLOW

No major contract wins or partnerships announced in last 30-60 days. The broader adtech space has seen mixed read-throughs - Alphabet/Meta results will inform sector sentiment ahead of DSP's print. No FDA/regulatory catalysts applicable. Russell 2000 constituent with no imminent index changes. Catalyst Type: Earnings (Medium Impact) - 13 days out provides time for setup to tighten further.

INSTITUTIONAL

Strong volume contraction (45.4% week-over-week) with price holding near pivot suggests institutional accumulation. Small float (20.3M) amplifies any incremental demand. Short interest at 10.4% with 4.1 days to cover creates squeeze potential on positive catalyst. No insider buying in last 60 days. Analyst target of $19.50 implies 38% upside - Street is constructive.

KEY RISK

Thesis invalid on a close below $12.80 (below the base low and 50-day MA), or if Q3 ad spend data shows material slowdown in CTV budgets. Technology sector underperformance (-3.2%) is a macro headwind - SMID tech breakouts have lower hit rate in this regime.

Excellent vol contraction (45%) and only 0.4% from pivot, but RS line NOT at new high and Technology sector lagging create headwinds. Base is loose (3.72) and short (14 days). Disconfirming argument: macro regime favors Energy/Utilities, not speculative adtech - DSP needs to prove earnings acceleration to overcome sector drag. Conviction: Medium

Stop: $38.00 - below consolidation low, invalidates near-term accumulation thesis

CATALYST INTELLIGENCE

EARNINGS

Nov 09 - Pre-revenue biotech - earnings call will focus on cash runway, clinical milestones, and pipeline updates rather than EPS/revenue. Valuation at P/S of 20.8x reflects platform premium; P/E is inapplicable for a cash-burning development-stage company. Cash position and burn rate will be key metrics to watch.

BUSINESS & POSITION

Septerna is a clinical-stage biotechnology company developing oral small molecule therapeutics targeting G protein-coupled receptors (GPCRs) using its proprietary StaR technology platform. Lead programs target metabolic diseases including obesity (GLP-1 pathway) and cardiovascular conditions, positioning it as a potential oral alternative to injectable GLP-1 agonists.

FACTOR & THEME

Core exposure to GLP-1/obesity theme which remains a top institutional focus. GPCR platform creates optionality across multiple drug targets. Biotech sector sentiment is mixed but oral GLP-1 competitors (structure, Viking, etc.) have seen significant interest. High beta (2.28) amplifies both upside and downside moves.

NEWS FLOW

No PDUFA dates or major clinical readouts announced in the near term based on available data. The 22,375% revenue growth figure reflects minimal baseline revenue from collaborations. Any oral GLP-1 data readout would be a major catalyst. Short interest at 12.7% with 9.2 days to cover creates significant squeeze potential on positive news. Catalyst Type: Corporate/Clinical (High Impact if announced) - currently no dated catalyst, which reduces setup quality.

INSTITUTIONAL

Strong volume contraction (46.1%) suggests accumulation, but base is only 5 days old - extremely short for institutional-quality setup. Small float (26.4M) and high short interest (12.7%) create explosive move potential. No insider buying in last 60 days. Institutional ownership data unavailable from this feed. Analyst target of $54.22 implies 23% upside.

KEY RISK

Thesis invalid on a close below $38.00 (below recent consolidation low), or on any negative clinical update, dilutive financing announcement, or cash runway concerns raised at earnings. Binary biotech risk with high beta - position sizing must reflect potential 30%+ drawdowns on adverse news.

Only 0.2% from pivot with strong vol contraction, but base is extremely short (5 days), RS line NOT at new high, and no identified near-term clinical catalyst. GLP-1 theme is hot but SEPN needs a dated catalyst to warrant A-grade. Disconfirming argument: 12.7% short interest may reflect informed skepticism about pipeline timelines or competitive positioning vs. Lilly/Novo oral programs. Conviction: Low-Medium

ENTRY TRIGGER

Close above $19.54 on volume >140% of 20-day avg (>2.2M shares)

Target: $23.00 - measured move from base plus analyst target cluster

Stop: $17.00 - below base low and key support, invalidates VCP

CATALYST INTELLIGENCE

EARNINGS

Nov 03 - Street expects ~$0.25 EPS on ~$140M revenue. Forward P/E of 13.8x on $1.36 EPS implies significant margin expansion expectation. Trailing P/E of 72.5x reflects early-stage profitability. Gross margins at 59.6% are strong for payments. Guidance on FY outlook will be key given 7-day catalyst window. Catalyst Type: Earnings (High Impact) - 7 days provides tight timeline for setup to resolve.

BUSINESS & POSITION

Flywire provides vertical-specific payment solutions for education, healthcare, and B2B markets, specializing in high-value cross-border transactions. The platform integrates payment processing, receivables management, and payer communication, creating sticky relationships with universities and healthcare systems.

FACTOR & THEME

Exposure to international student flows (education vertical) and healthcare payment modernization. Cross-border payments theme remains secular but faces FX volatility headwinds. Technology sector lagging (-3.2%) creates near-term headwind. Revenue growth of 27.2% shows strong underlying momentum.

NEWS FLOW

No major contract wins or acquisitions announced recently. International student enrollment trends remain positive post-COVID, supporting education vertical. Healthcare vertical benefiting from RCM modernization cycle. Short interest at 10.5% with 8.6 days to cover suggests skepticism but creates squeeze potential. No insider buying in last 60 days.

INSTITUTIONAL

Volume dry-up confirmed but not strict (vol_w2 > vol_w3), suggesting some distribution mixed with accumulation. Float is liquid (96.5M) which reduces squeeze dynamics relative to smaller-float names. Analyst target of $21.07 implies 12% upside - modest. Setup score of 48 is lowest among candidates, reflecting mixed technical signals.

KEY RISK

Thesis invalid on a close below $17.00 (below base low and 50-day MA), or on Q3 miss/guide-down driven by FX headwinds or education enrollment softness. Technology sector underperformance is a structural headwind - FLYW needs sector rotation to participate fully.
