Analysis
Catalyst / Today's Driver
Current move driven by continued momentum in immune medicine diagnostics and recent outperformance (+40.6% vs SPY 12-week). Forward catalyst: November 4 earnings print (43 days out) is the key binary event that can extend this move if guided by expansion in clinical partnerships or pharma collaborations.
Business & Position
Adaptive Biotechnologies develops immune-driven diagnostics and therapeutics using proprietary immune sequencing technology to map T- and B-cell receptors. The company's platform serves both clinical diagnostics (minimal residual disease testing in blood cancers) and drug discovery partnerships with pharma giants.
Factor & Theme
Positioned at the intersection of biotech innovation and precision medicine, benefiting from secular tailwinds in personalized oncology diagnostics and immune-profiling for drug development. Theme momentum is steady but not accelerating-biotech remains selective with capital flowing to late-stage or revenue-generating assets.
Breakout Signal
Close above \$28.32 on vol >1.5x of 20d avg
Institutional
Volume surge to 1.69x is modest and suggests retail participation rather than institutional block accumulation. Zero insider buying in the last 90 days is a notable absence for a stock nearing 52-week highs-management conviction signal is missing. Institutional ownership data not available from this feed; recommend cross-referencing 13F filings for positioning clarity.
Earnings
Earnings in 43D
Earnings Context
Next earnings November 4. Consensus and beat history not provided in dataset. Historical volatility around prints is typical for pre-profitable biotech-guidance on partnership milestones and cash burn will drive post-earnings direction.
Key Risk
Thesis invalid on a close back below \$26.50 (approximate base breakout pivot), or on any negative clinical trial readout or pharma partnership delay disclosed ahead of or at the November 4 print. Single-customer concentration risk if pharma partnerships stall.
Analysis
Strong 12-week relative strength (+40.6% vs SPY) and proximity to 52-week highs (98.4%) are compelling, but the RS line is NOT at new highs-the critical Qullamaggie leadership confirmation is absent. Base is wide (3.89 ATR, well above the 2.0 VCP threshold), volume surge is modest (1.69x, not institutional), and zero insider buying removes a key conviction signal. The strongest disconfirming evidence: macro regime is Risk-On Large-Cap Leadership, creating a crosswind for SMID biotech breakouts, and the November earnings 43 days out is too distant to provide immediate follow-through fuel. This is a solid momentum name but lacks the technical precision and institutional confirmation for an A-grade. Conviction: Medium.
Signal: Close above \$28.32 on vol >1.5x of 20d avg
Vol vs Avg: 1.69x
