ANALYSIS

CATALYST / TODAY'S DRIVER

Massive volume surge on likely positive data leak or imminent Phase 2b NASH/obesity readout. Forward catalyst: October 28 earnings (36d) could announce top-line data from VK2735 (oral GLP-1) or VK2809 (NASH), or guidance on partnering/Phase 3 plans.

BUSINESS & POSITION

Viking develops oral GLP-1 receptor agonist VK2735 for obesity and metabolic disease, competing in the white-hot weight-loss market against Novo/Lilly. The company also has VK2809 (thyroid receptor beta agonist) in Phase 2b for NASH, offering dual revenue optionality.

FACTOR & THEME

Pure-play GLP-1 exposure with oral formulation differentiation vs. injectables-theme remains white-hot despite recent volatility. NASH is a massive unmet need (\$35B+ market), and any positive data extends runway significantly.

BREAKOUT SIGNAL

Close above \$39.73 on volume >2028% of 20d avg

INSTITUTIONAL

Volume at 20.3x average is extreme institutional block activity-this is not retail. No insider buying in last 60d is notable; biotech insiders often stay quiet pre-data. Float of 113.7M allows for meaningful institutional accumulation without spiking price prematurely.

EARNINGS

EARNINGS IN 36D

EARNINGS CONTEXT

October 28 earnings. Consensus not provided for pre-revenue biotech; prior calls have focused on trial enrollment updates and cash runway. Serial data catalyst company-market re-rates on each positive readout.

KEY RISK

Thesis invalid if trial data disappoints or FDA raises safety concerns; technically, a close back below \$32.50 (prior resistance) negates breakout. Binary event risk is extreme-this is a data-driven stock.

ANALYSIS

Explosive volume and proximity to 52w high signal major news flow, but RS line not at new high and RS vs SPY slightly negative remove A-grade eligibility. Base is wide (6.71 ATR) and stock has underperformed SPY-disconfirming evidence that this may be a single-event pop rather than a sustainable breakout. October 28 earnings is the next binary catalyst; if no data announced, setup exhausts quickly. Conviction: Medium.

ANALYSIS
CATALYST / TODAY'S DRIVER
Clean technical breakout near 52w high (\$6.98) with strong RS momentum (+31.8 vs SPY). Forward catalyst: November 11 earnings (50d) is the next major event; any guidance beat or large merchant win (e.g., BNPL partnership, international expansion) could push stock to new highs.
BUSINESS & POSITION
Riskified provides AI-powered e-commerce fraud prevention and chargeback guarantee services, serving enterprise merchants. The company operates a high-margin SaaS model with network effects-each transaction improves the ML models, creating a competitive moat.
FACTOR & THEME
Dual exposure to AI (ML-driven decisioning) and e-commerce recovery. Consumer spending data has been mixed, but fraud prevention is counter-cyclical-higher fraud rates in uncertain times drive demand. Technology sector leadership this week (+6.6%) is a tailwind.
BREAKOUT SIGNAL
Close above \$6.72 on volume >280% of 20d avg
INSTITUTIONAL
Volume 2.8x average is solid but not explosive; base_tight of 3.03 suggests institutions have been quietly absorbing supply. No insider buying in last 60d. Float of 54M is mid-size, allowing for meaningful fund accumulation without excessive slippage.
EARNINGS
EARNINGS IN 50D
EARNINGS CONTEXT
November 11 earnings. Consensus not provided; prior quarters have shown revenue growth decelerating but improving profitability. Market will focus on GMV growth and chargeback guarantee attach rates as key KPIs.
KEY RISK
Thesis invalid on a close below \$6.20 (prior pivot/support) or if November 11 earnings show continued GMV deceleration without margin expansion. E-commerce slowdown is the macro bear case; any large merchant churn would be fatal.
ANALYSIS
Prox_52w at 96.2% and RS +31.8 vs SPY are excellent, but RS line not at new high and base_tight of 3.03 (wider than ideal) prevent A-grade. Technology sector strength is supportive. Stock is <4% from 52w high-if it clears \$6.98 on volume, re-grade to A. November 11 earnings is 50 days out, providing runway for technical follow-through. Conviction: Medium.
Signal: Close above \$6.72 on volume >280% of 20d avg
Vol vs Avg: 2.8x

Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER Strong 13% move suggests diagnostic testing volume recovery or reimbursement news. Forward catalyst: November 5 earnings (44d) is the next major event; any Medicaid/Medicare coverage expansion for UNITY (non-invasive prenatal test) or international launch could extend rally.
BUSINESS & POSITION BillionToOne develops molecular diagnostics with a focus on non-invasive prenatal testing (NIPT) and genetic disease screening. The UNITY platform offers single-gene disorder detection from maternal blood, a significant advance over amniocentesis.
FACTOR & THEME Genetic diagnostics benefit from expanding newborn screening mandates and payor coverage. Theme is secular but slower-growth than AI/tech. Healthcare sector is not leading this week, but diagnostic testing volumes have recovered post-COVID.
BREAKOUT SIGNAL Close above \$117.19 on volume >164% of 20d avg
INSTITUTIONAL Volume 1.6x average is modest for a 12.8% move-this is not broad institutional buying. Float of 28.8M is small, allowing for volatility but also illiquidity. No insider buying in last 60d. Institutional ownership data not available from this feed; recommend cross-referencing with 13F filings.
EARNINGS EARNINGS IN 44D
EARNINGS CONTEXT November 5 earnings. Consensus not provided; prior quarters have shown revenue growth driven by UNITY test adoption. Market will focus on reimbursement trends and international expansion.
KEY RISK Thesis invalid on a close below \$105 (prior support) or if November 5 earnings show reimbursement headwinds or competitive pressure from Quest/LabCorp. Stock is 22% below 52w high of \$150.44-overhead supply risk from prior holders.
ANALYSIS Prox_52w at 77.9% and base_tight 3.43 are solid, but RS vs SPY is barely positive (+2.9), RS line not at new high, and volume 1.6x is underwhelming. Healthcare is not a leading sector this week, creating a headwind. November 5 earnings in 44d is the next catalyst-if the company announces major payor wins or international revenue, this could re-rate higher. Base is relatively tight, suggesting institutions have been accumulating. Conviction: Medium.
Signal: Close above \$117.19 on volume >164% of 20d avg Vol vs Avg: 1.6x

Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
Clean technical setup with base_tight 2.04 (near VCP-quality) and volume 1.6x. Forward catalyst: October 29 earnings (37d) is the critical event; any beat/raise driven by CPaaS (Communications Platform as a Service) adoption or enterprise customer wins would drive follow-through.
BUSINESS & POSITION
Bandwidth provides cloud-based communications APIs for voice, messaging, and 911 services, competing with Twilio and Vonage. The company serves enterprises migrating from legacy telecom to programmable cloud infrastructure, a high-margin recurring revenue model.
FACTOR & THEME
Cloud infrastructure and digital transformation tailwinds remain intact. CPaaS market is growing mid-teens annually, driven by customer engagement and contact-center modernization. Technology sector leadership this week (+6.6%) is supportive.
BREAKOUT SIGNAL
Close above \$57.30 on volume >158% of 20d avg
INSTITUTIONAL
Volume 1.6x is modest, but base_tight of 2.04 suggests a textbook coil-institutions have been absorbing supply quietly without spiking price. Float of 29M is relatively small for a \$1.8B company, allowing for meaningful moves on institutional flows. No insider buying in last 60d.
EARNINGS
EARNINGS IN 37D
EARNINGS CONTEXT
October 29 earnings. Consensus not provided; prior quarters have shown revenue growth reaccelerating after a 2025 slowdown. Market will focus on enterprise customer net adds and messaging/voice ARPU trends.
KEY RISK
Thesis invalid on a close below \$52.50 (prior pivot/support) or if October 29 earnings disappoint on customer growth or margins. Stock is 28% below 52w high of \$79.08-overhead supply from prior holders is a risk if momentum stalls.
ANALYSIS
Base_tight 2.04 is textbook VCP-quality, and prox_52w 72.5% is solid. RS vs SPY +3.8 is positive but modest. RS line not at new high prevents A-grade. Volume 1.6x is underwhelming for a breakout, but the tight base suggests quiet institutional accumulation. Technology sector leadership is a tailwind. October 29 earnings in 37d is the next catalyst-if the company beats and raises, this could push to new highs. Conviction: Medium.
Signal: Close above \$57.30 on volume >158% of 20d avg

Analysis
Catalyst / Today's Driver RS line at new high-Qullamaggie's #1 early leader signal. Stock is 2% from 52w high with exceptional RS +52.2 vs SPY. Forward catalyst: November 12 earnings (51d) is the next binary event; any turnaround narrative (brand repositioning, cost cuts, licensing revenue) could extend rally. One insider buy (\$40K) in last 60d shows modest conviction.
Business & Position Fossil designs, markets, and distributes fashion watches, jewelry, and leather goods under owned and licensed brands. The company has been restructuring for years, closing stores and shifting to digital/licensing models to stem losses.
Factor & Theme Consumer discretionary recovery and brand turnaround theme. Footwear & accessories category is cyclical; any consumer spending uptick benefits. Stock is a classic 'cigar butt' value play-small cap with operational leverage if sales stabilize.
Breakout Signal Close above \$6.37 on volume >153% of 20d avg
Institutional Volume 1.5x is modest, but RS line new high is a powerful institutional confirmation signal-smart money is accumulating early. One insider buy totaling \$40K in last 60d is small but notable given the stock's distressed history. Float of 46M allows for volatility.
Earnings Earnings in 51D
Earnings Context November 12 earnings. Consensus not provided; prior quarters have shown continued revenue declines but improving margins via cost cuts. Market will focus on cash burn rate and any licensing deal announcements.
Key Risk Thesis invalid on a close below \$5.80 (prior resistance/support) or if November 12 earnings show accelerating revenue declines or liquidity concerns. This is a turnaround story-execution risk is extreme, and consumer cyclical exposure is a macro headwind if recession hits.
Analysis RS line new high + prox_52w 98.0% + RS +52.2 vs SPY are all A-grade signals, but base_tight 6.32 (extremely wide) and volume only 1.5x downgrade to B. This is a damaged-goods turnaround play, not a high-quality institutional breakout. Consumer Cyclical is not a leading sector this week. One insider buy (\$40K) is modest but notable. November 12 earnings in 51d is the next catalyst-if the company beats or announces a major licensing deal, this could break to new highs. Conviction: Medium.
Signal: Close above \$6.37 on volume >153% of 20d avg Vol vs Avg: 1.5x
