| Catalyst / Today's Driver                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Earnings reported today are the immediate driver - a strong print with beat on revenue/EPS or positive forward guidance on tanker day-rates is lifting the stock to within 3% of its 52-week high. Forward catalyst path: energy sector is the #2 leading sector this week (+8.4% vs SPY), and any follow-on analyst upgrades, dividend announcement, or tanker rate commentary over the next 4-8 weeks can extend the move; next earnings cycle in ~Q3 2026 is the next binary event.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Business & Position                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| CMB.TECH NV is a Belgian-listed diversified shipping and clean-energy transportation conglomerate operating ammonia-powered and conventional tanker vessels across crude, product, and chemical segments. Its competitive edge lies in its early-mover positioning in hydrogen/ammonia marine propulsion combined with a large, diversified fleet generating visible cash flows tied to elevated tanker day-rates.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Factor & Theme                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Direct exposure to global energy trade flows, LNG/ammonia shipping as a decarbonization vector, and the broader energy sector momentum theme that is the second-strongest sector this week. Secular tailwind from energy transition (green ammonia shipping) overlapping with cyclical tailwind from tight tanker supply-demand.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Breakout Signal                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Institutional                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Institutional ownership data is not available from this feed - recommend cross-referencing 13F filings. No insider buying in the last 60 days per SEC Form 4 data. However, the volume at 5.1x average on an earnings day at a 52-week-high breakout is consistent with institutional block accumulation rather than retail FOMO, given the \$4.8B market cap and 111M share float requiring meaningful capital to move. The RS line at a new 52-week high is Qullamaggie's #1 early institutional leader signal.                                                                                                                                                                                                                                                                                                                                                                                                               |

| Thesis invalid on a close back below \$15.50 (the pre-earnings base / 20MA area), or if tanker day-rate commentary in today's earnings call signals demand deterioration; a single-day earnings pop that fades intraday with volume drying up would confirm exhaustion of the catalyst.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Analysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| The strongest disconfirming evidence is that base_tight at 4.66 is well above the textbook coil threshold (<2.0), meaning this is NOT a clean VCP setup but rather a volatile, wide-range stock gapping on earnings - these moves frequently retrace 50-80% within days as event-driven positioning unwinds. RS line IS at a new high and prox_52w at 97.3 is elite, and the Energy sector is the week's second-best performer, but the IWM/SPY trend at -4.3% signals small-cap and risk-off headwinds that historically cause earnings gap-ups in mid-cap names to fade without broad follow-through. No insider buying. The forward catalyst path post-earnings is thinner - the trade is partially discounting the only near-term binary event. Grade held at B (not A) because base_tight fails and rs_vs_spy at +15.7 while strong doesn't compensate for the wide base and earnings-exhaustion risk. Conviction: Medium. |

Signal: Close above \$16.61 (52W high proximity at 97.3%) on vol

| CATALYST / TODAY'S DRIVER                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Post-earnings continuation move - Silicon Motion reported results on April 28 and the stock has continued to trend higher over the subsequent three weeks, now breaking out of a tight 1.64 base_tight coil on 1.51x volume. Forward catalyst: Technology is the #1 sector this week (+9.6% vs SPY); the next AI infrastructure spending cycle, NAND controller demand data points from major customers (Western Digital, Kioxia), and any analyst day or guidance raise event over the next 8-12 weeks can extend the move materially.                                                                                                                                                                                                                                                                                                                     |
| BUSINESS & POSITION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Silicon Motion Technology is the global leader in NAND flash controller ICs for SSDs, used across enterprise, client, and industrial storage applications - a critical and largely invisible layer of the AI infrastructure buildout where massive SSD capacity is required in data centers. Its dominant market share in the eMMC/UFS mobile storage controller market and expanding enterprise SSD exposure give it pricing power and long-cycle design-win visibility.                                                                                                                                                                                                                                                                                                                                                                                   |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Core AI infrastructure pick-and-shovel play via the storage layer - every AI training cluster and inference server requires high-speed NAND storage where SIMO's controllers are embedded. Also exposed to the smartphone upgrade cycle and PC refresh; theme momentum in AI semiconductor infrastructure is strongly accelerating in the leading Technology sector (+9.6% this week).                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| BREAKOUT SIGNAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Institutional ownership data is not available from this feed - recommend cross-referencing 13F filings given SIMO's \$8.6B market cap where institutional ownership is almost certainly substantial. No insider buying in the last 60 days per SEC Form 4; no 12-month insider buy data available in this feed. The volume profile on a 3-week post-earnings continuation with base_tight at 1.64 (textbook coil) is consistent with institutional absorption - supply drying up and price coiling tightly after the earnings gap is a classic silent-build precursor to the next leg.                                                                                                                                                                                                                                                                      |

| Earnings reported April 28 (REPORTED). Specific consensus EPS/revenue beat figures not available in this feed, but the stock's continued 5.5% move 21 days post-earnings on the leading sector day suggests the print was materially positive and the market is still digesting upside revisions. Next earnings cycle likely late July/August 2026 - monitor for management's NAND demand commentary as the primary forward catalyst.                                                                                                                                                                                                                                                                                                                                                                                                                       |
| KEY RISK                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Thesis invalid on a close back below \$240 (the base low / approximate 10-day tight range floor); if NAND spot prices deteriorate materially or a major customer (Samsung, WD) cuts SSD orders, the demand narrative collapses. At prox_52w of 92.3%, the stock is 7.7% from its all-time high - a failure at that level with reversal below \$245 would confirm distribution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| ANALYSIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| The strongest disconfirming evidence is that rs_line_new_high is FALSE despite rs_vs_spy of +84.1 - this is a notable divergence suggesting the RS line has not yet confirmed the price action, which under strict Qullamaggie methodology is the single most important missing piece for an A-grade. Volume at 1.51x barely clears the threshold and base_tight at 1.64 is textbook-tight (the best feature of this setup). The no-news continuation in the leading Technology sector on a quiet-volume textbook coil is exactly the type of institutional accumulation pattern that precedes large moves, but the mixed macro regime (IWM lagging SPY by 4.3%) reduces conviction. SIMO is the highest-RS name in the scan at +84 vs SPY and the coil is ideal - the missing RS line confirmation is the only reason this isn't an A. Conviction: Medium. |
| Signal: Close above \$252.92 on continuation volume >1.5x 20-day                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>Catalyst / Today's Driver</b><br>Pure technical breakout - GCT Semiconductor is pushing to a 52-week high (96.6% proximity, within 3% of \$2.90 high) on 2.11x volume with the RS line at a new 52-week high, the strongest fundamental momentum signal in the Qullamaggie framework. Forward catalyst: next earnings August 11, 2026 (~84 days); any design win announcement, partnership, or sector follow-through in the leading Technology sector over the next 4-8 weeks is the next potential catalyst.                                                                                                                                                                                                                                                                                                                                                              |
| <b>Business &amp; Position</b><br>GCT Semiconductor is a fabless semiconductor company developing wireless chipsets including 5G/LTE solutions for IoT, fixed wireless access, and mobile broadband applications. It competes in the small-cell and private wireless network infrastructure segment, where 5G densification creates a multi-year design cycle opportunity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Factor &amp; Theme</b><br>5G infrastructure build-out, IoT connectivity, and private wireless networks - secular tailwinds that remain intact. However, at \$230M market cap, this is a speculative micro-cap with binary outcome risk on any revenue execution. Technology sector is the leading sector this week, providing a supportive backdrop.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Breakout Signal</b><br>Close above \$2.80 toward \$2.90 52W high on volume >2x 20-day average - RS line at new high micro-cap breakout                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Institutional</b><br>Institutional ownership data is not available from this feed - at \$230M market cap, institutional ownership is likely limited, which cuts both ways: under-owned names have the most incremental buyer fuel if a catalyst materializes, but illiquidity also means sharp reversals. No insider buying in the last 60 days per SEC Form 4. Volume at 2.11x on a micro-cap at 52-week highs can represent relatively small absolute dollar flows - treat with caution.                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Earnings</b><br>Earnings in 84D                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Earnings Context</b><br>Next earnings August 11, 2026. Consensus EPS/revenue estimates not available for this micro-cap in this feed. Prior beat history unavailable - this is a speculative setup where the RS line at a new high is doing the work, not fundamental visibility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Key Risk</b><br>Thesis invalid on any close below \$2.55 (approximate base support); at \$230M market cap with base_tight of 5.98 (very wide, not a coil), this is a volatile micro-cap where the same volume that drives a 9% up-day can produce a 15-20% down-day - position sizing must reflect binary liquidity risk.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Analysis</b><br>The strongest disconfirming evidence is that base_tight at 5.98 is the widest in the entire scan - this is the antithesis of a controlled institutional coil, meaning the price action has been erratic and the breakout is not emerging from a tight, well-constructed base. RS line at a new 52-week high with rs_vs_spy of +116.5 is exceptional momentum signal, but at \$230M market cap with a wide volatile base and zero insider buying, this reads more as retail/momentum-driven speculation than institutional accumulation. The Technology sector tailwind and rs_line_new_high prevent a C grade, but the lack of base quality and micro-cap execution risk cap this at a low-conviction B. In a mixed/transitional macro regime with IWM underperforming, micro-cap breakouts have historically lower follow-through rates. Conviction: Low. |
| <b>Signal:</b> Close above \$2.80 toward \$2.90 52W high on volume >2x 2<br><b>Vol vs Avg:</b> 2.11x                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| A significant single-day surge of 10.6% on 2.1x volume suggests a specific catalyst - likely a positive freight volume data release, a competitor earnings beat signaling freight market recovery, or analyst upgrade/target raise for the trucking/logistics sector. Forward catalyst: the freight cycle recovery is the multi-month theme; next earnings August 6, 2026 (~79 days) will be the next binary event where management can confirm or deny volume and rate recovery - a key inflection point for the reshoring and domestic freight narrative.                                                                                                                                                                                                               |
| BUSINESS & POSITION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| RXO is a pure-play tech-enabled freight brokerage and managed transportation platform spun off from XPO Logistics in 2022, connecting shippers and carriers via its digital marketplace. It occupies a capital-light brokerage model that benefits disproportionately from freight cycle recoveries as spot rates and volumes normalize from trough levels.                                                                                                                                                                                                                                                                                                                                                                                                               |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Reshoring of US manufacturing creates structural demand for domestic freight capacity; the freight cycle recovery from a prolonged 2022-2024 downturn is the primary cyclical catalyst. Also exposed to e-commerce fulfillment logistics and nearshoring supply chain reconfiguration. Freight recovery theme is gaining traction as a 2026 macro narrative.                                                                                                                                                                                                                                                                                                                                                                                                              |
| BREAKOUT SIGNAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Close above \$21.13 toward \$23.37 52W high on volume >2x 20-day average - freight cycle breakout from base                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| INSTITUTIONAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Institutional ownership data is not available from this feed - recommend cross-referencing 13F filings for this \$3.5B market cap name. No insider buying in the last 60 days or 12-month window per available data. Volume at 2.1x on a 10.6% move in a \$3.5B cap with 125M share float suggests institutional participation, though the lack of insider confirmation is a gap. The RS line is NOT at a new high despite rs_vs_spy of +27.2, which is the key missing institutional confirmation signal.                                                                                                                                                                                                                                                                |

| Thesis invalid on a close back below \$19.50 (the pre-breakout consolidation area and approximate 20MA); if freight spot rates fail to recover or a major brokerage competitor reports weakening volumes at Q2 earnings, the cycle recovery thesis is invalidated and this is merely a short-squeeze/noise move.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ANALYSIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| The strongest disconfirming evidence is that base_tight at 4.43 is well above the coil threshold, the RS line is not at a new high, and there is zero insider buying - meaning none of the three highest-conviction signals (tight base, RS line confirmation, insider buying) are present. The 10.6% move on only 2.1x volume in a 125M share float at \$3.5B market cap is notable but not definitively institutional. The freight cycle recovery thesis is real and the prox_52w of 90.4% is constructive, but without a tighter base or RS line confirmation this is a momentum chase in a mixed macro regime where IWM is lagging badly. The forward catalyst (earnings in 79 days) is too far out to sustain momentum without interim data points. Conviction: Low. |
| Signal: Close above \$21.13 toward \$23.37 52W high on volume >2x                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Massive insider buying cluster (41 open-market buys totaling \$3.4M in the last 60 days) is the primary conviction signal - this level of insider activity in a 13.7M share float is exceptional. The immediate forward catalyst is earnings in 2 days (May 21), which insiders are clearly positioning ahead of. A strong Q1 print with distribution/dividend guidance or charter rate commentary could be the price discovery event. The tight base (1.54) and proximity to 52W high (96.1%) suggest the stock is coiled pre-earnings.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| BUSINESS & POSITION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Navios Maritime Partners LP is a diversified marine shipping MLP operating dry bulk, container, and tanker vessels with long-term charter contracts providing cash flow visibility. Its competitive edge is a diversified fleet across multiple shipping segments combined with MLP distribution mechanics that attract yield-oriented institutional holders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Global trade volume recovery, commodity transport demand, and energy shipping - all exposed to the leading Energy sector theme (+8.4% vs SPY this week). Also benefits from tight vessel supply as orderbook-to-fleet ratios remain low across dry bulk and tanker segments. Geopolitical trade route disruptions (Red Sea, Panama Canal) structurally support elevated shipping rates.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| The 41 open-market insider buys totaling \$3.4M in the last 60 days on a stock with only 13.7M shares in the float is the most extraordinary insider signal in this entire scan. While insider_senior shows 0 C-suite designation in the data, 41 separate Form 4 purchases represents a broad insider conviction cluster that is extremely rare and historically high-alpha. GRADE UPGRADE RULE APPLIES: insider_cluster = 7 with 41 buys triggers upgrade consideration - however, the mixed macro regime (not clearly risk-on) limits the full upgrade. The float of 13.7M shares means this is highly squeeze-able if institutional buyers step in post-earnings. Institutional ownership data not available from this feed.                                                                                                                                                                                                                                                                          |

| Earnings in 2 days (May 21). Consensus EPS/revenue estimates not available in this feed. The pre-earnings insider buying cluster strongly implies insiders expect a materially positive print - this is the highest-signal pre-earnings positioning indicator available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| KEY RISK                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Thesis invalid on any close below \$70.00 (the tight base low / approximate 20MA support); the binary risk of earnings in 2 days means a miss or dividend cut would likely gap the stock down 10-15%+ from current levels, and the tight float means liquidity dries up fast on a negative print. Also note that 41 insider buys may include unit/distribution reinvestment plan purchases - verify these are genuine open-market discretionary buys on Form 4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| ANALYSIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| The strongest disconfirming evidence is that rs_vs_spy is only +5.0 and rs_line_new_high is FALSE - relative performance is the weakest of any B-grade candidate in this scan, meaning NMM has NOT been a true market leader on a price-relative basis despite sitting near its 52W high. Volume at 1.57x is modest. The bull case rests almost entirely on the extraordinary insider buying cluster (41 buys, \$3.4M, 60 days) in a tiny 13.7M share float ahead of a 2-day earnings catalyst - if verified as genuine discretionary open-market purchases, this is among the highest-quality alpha signals available. The GRADE UPGRADE RULE would trigger BA on insider_cluster=7 in a risk-on regime, but the mixed/transitional macro with IWM lagging prevents full upgrade; holding at strong B. This is a pre-earnings binary event: right for the right reasons or catastrophically wrong quickly. Conviction: Medium (driven by insider signal; reduced by binary event risk and weak RS line). |
| Signal: Hold above \$74.85 into May 21 earnings on textbook 1.54                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Vol vs Avg: 1.57x                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
