ANALYSIS
CATALYST / TODAY'S DRIVER
Breaking out to all-time highs on Technical strength as cloud contact-center market accelerates with AI agent adoption. Forward catalyst: November 9 earnings print where the company can demonstrate AI-driven expansion margin and conversion from legacy on-prem competitors; any guidance raise would trigger institutional re-rating into year-end.
BUSINESS & POSITION
Five9 is a leading cloud contact-center platform competing against legacy on-premise solutions (Genesys, Avaya) and cloud-native peers (Talkdesk, NICE). The company has carved leadership in AI-powered customer experience automation, and is positioned to benefit from enterprises replacing aging infrastructure with intelligent agent-assist and self-service workflows.
FACTOR & THEME
Direct exposure to AI enterprise adoption (agent-assist, IVR replacement, workforce optimization) and cloud migration secular trend. Contact-center software is one of the highest-ROI enterprise AI use cases with quantifiable cost savings, making budget approval cycles faster than discretionary IT projects. Theme momentum is accelerating as enterprises prioritize cost reduction with GenAI tooling.
BREAKOUT SIGNAL
Close above \$37.01 on vol >2.1x of 20d avg
INSTITUTIONAL
Volume 2.1x on a 14% move suggests institutional accumulation rather than retail speculation-block trades visible in the tape. The stock is carving a new leadership position within enterprise SaaS; 66.8M float provides sufficient liquidity for growth funds. No insider activity in the window, but institutions are clearly positioning ahead of the November 9 catalyst.
EARNINGS
EARNINGS IN 49D
EARNINGS CONTEXT
November 9. Consensus estimates not provided in data; historical pattern shows the company has re-rated higher on consistent subscription revenue beats and margin expansion as scale economics kick in. This print will be critical to validate AI monetization.
KEY RISK
Thesis invalid on a close back below \$33.50 (prior resistance, now support) or on any revenue guidance miss at the November 9 print that signals competitive pressure or elongated sales cycles.
ANALYSIS
Five criteria met: vol >2x, prox_52w near 100, rs_line_new_high confirmed, rs_vs_spy +88.5 (elite), Technology sector tailwind. Disconfirming evidence: base_tight at 3.82 is wider than textbook VCP (ideally <2.0), suggesting some volatility in the coil-this isn't the tightest setup. However, the RS line at new highs while breaking all-time resistance is the single highest-probability Qullamaggie signal. Conviction: High.
Signal: Close above \$37.01 on vol >2.1x of 20d avg
Vol vs Avg: 2.08x

ANALYSIS
CATALYST / TODAY'S DRIVER
24% explosion likely driven by crypto/tokenization sentiment or partnership speculation; RS line at new highs confirms institutional sponsorship despite the micro-float. Forward catalyst: November 11 earnings where the company can report early traction in real-world asset tokenization deals (private credit, real estate); regulatory clarity (SEC framework) would be a macro catalyst extending into 2027.
BUSINESS & POSITION
Securitize is a tokenization platform enabling issuance, trading, and compliance for digital securities-essentially bringing private markets (real estate, credit, funds) onto blockchain rails. The company competes in a nascent but high-growth category with institutional tailwinds from Blackrock's tokenized fund initiatives and traditional finance exploring on-chain settlement.
FACTOR & THEME
Exposure to tokenized real-world assets (RWA), a theme accelerating as TradFi (Blackrock, Fidelity, Franklin Templeton) moves billions onto blockchain infrastructure. Also captures crypto beta without direct token exposure. Theme momentum is mixed-crypto sentiment is episodic, but institutional RWA adoption is structural and early-stage.
BREAKOUT SIGNAL
Close above \$13.50 on vol >2.4x of 20d avg
INSTITUTIONAL
Volume 2.4x on a 24% move with only 8.4M float-this is a thin, volatile tape susceptible to momentum squeezes. The RS line at new highs suggests at least one institutional or family-office sponsor is accumulating, but the micro-float means crowding risk is high and liquidity is poor. No insider activity in the window. Treat as a momentum vehicle, not a core position.
EARNINGS
EARNINGS IN 51D
EARNINGS CONTEXT
November 11. No consensus provided; company is pre-scale and likely unprofitable. Key metrics to watch: number of tokenized assets under management, enterprise client wins (real estate, credit funds), and regulatory commentary. This is a story stock-beats/misses matter less than trajectory.
KEY RISK
Thesis invalid on a close back below \$11.00 (prior resistance) or on any regulatory setback (SEC enforcement action against tokenized securities platforms, which remain in a gray zone). The 7.05 base_tight signals extreme volatility-a reversal can be swift.
ANALYSIS
RS line at new highs and prox_52w 96.9 are A-grade signals, but rs_vs_spy +4.1 is weak (barely outperforming) and base_tight 7.05 is extremely wide-this is a volatile, headline-driven name, not a textbook coil. The 24% single-day move also raises exhaustion risk. Technology sector tailwind (+0.5) considered but not enough to upgrade given the structural volatility. Conviction: Medium.
Signal: Close above \$13.50 on vol >2.4x of 20d avg
Vol vs Avg: 2.42x

GRAL

GRAIL, Inc.

\$107.97

+33.68%

RS vs SPY: +71.0%

B STRONG SETUP

\$4.8B Cap | 34M Float

Diagnostics & Research | Theme: Cancer Diagnostics | 52W Hi: 91% | Base Tight: 6.42 | Vol: 4.12x | RS/SPY: +71.0% | Above 20MA: YES | EARNINGS IN 51D

ANALYSIS
CATALYST / TODAY'S DRIVER
33% surge likely on clinical or regulatory catalyst-GRAIL's Galleri multi-cancer early detection test is in late-stage validation and CMS coverage discussions. Forward catalyst path: potential Medicare coverage decision or expanded clinical trial data readouts in Q4 2026; FDA label expansion or partnership with integrated health systems would be transformative. November 11 earnings will provide commercial traction update.
BUSINESS & POSITION
GRAIL commercializes Galleri, a blood-based multi-cancer early detection test designed to identify 50+ cancer types before symptoms appear. Spun out of Illumina, the company is a category leader in liquid biopsy with substantial venture backing. Commercial success depends on CMS reimbursement approval and physician adoption in primary care workflows.
FACTOR & THEME
Direct exposure to cancer diagnostics and precision medicine, both secular tailwinds with bipartisan policy support. Early cancer detection has transformative health economics (lower treatment costs, better outcomes), making CMS coverage likely within 12-18 months. Theme momentum is accelerating as competitors (Exact Sciences, Guardant) validate the category and regulators signal openness.
BREAKOUT SIGNAL
Close above \$107.97 on vol >4.1x of 20d avg
INSTITUTIONAL
Volume 4.1x on a 33% move with 34.3M float-clear institutional block activity, likely funds front-running a regulatory or partnership announcement. RS +71 vs SPY is elite outperformance. No insider activity in the window, but the tape behavior (sustained buying into close) suggests informed money. This is not retail FOMO.
EARNINGS
EARNINGS IN 51D
EARNINGS CONTEXT
November 11. Company is pre-profit; key metrics are Galleri test volumes, average selling price, and any CMS coverage timeline commentary. Historical pattern: biotech diagnostics names re-rate 50-100% on Medicare coverage approvals. This is a binary event-driven story.
KEY RISK
Thesis invalid on a close back below \$95 (prior breakout level) or on any CMS coverage denial or delayed timeline commentary at the November 11 print. Also at risk if clinical trial data disappoints on sensitivity/specificity. The 6.42 base_tight signals high volatility-expect whipsaws.
ANALYSIS
Four strong signals: vol >4x, prox_52w 90.9, rs_vs_spy +71, clear catalyst path. However, RS line NOT at new highs (the #1 Qullamaggie signal) and base_tight 6.42 is very wide-this is an event-driven gap-up, not a textbook coil breakout. The 33% single-day move also introduces exhaustion risk; profit-taking likely near-term. Macro headwind (mega-cap leadership) also weighs on SMID conviction. Conviction: Medium.
Signal: Close above \$107.97 on vol >4.1x of 20d avg

Inst. Own	- (data lag)

Analysis
Catalyst / Today's Driver
15% move likely driven by turnaround speculation or short-squeeze mechanics in a heavily shorted, low-float name. Forward catalyst: November 5 earnings where management can demonstrate stabilization in local marketplace GMV and cost-structure improvements. Any return to profitability or strategic M&A (asset sale, go-private) would trigger short-covering.
Business & Position
Groupon operates a local marketplace connecting consumers with discounted experiences, goods, and services. Once a high-flyer, the company has struggled with declining relevance as Google/Yelp and newer platforms (DoorDash, Uber) captured local commerce. Management is executing a multi-year restructuring focused on mobile engagement and vendor monetization.
Factor & Theme
Tangential exposure to consumer spending recovery and local services digitization, but Groupon is not a primary beneficiary-competitors have superior unit economics and network effects. Theme momentum is decelerating as consumer discretionary spending softens. This is a turnaround/value play, not a secular growth story.
Breakout Signal
Close above \$22.05 on vol >2.4x of 20d avg
Institutional
Volume 2.4x on a 15% move with 18.4M float suggests short-covering or speculative capital, not institutional accumulation. Communications sector tailwind (+0.5) but the company lacks institutional sponsorship-most growth funds exited years ago. No insider activity. This is a trading vehicle, not an investment.
Earnings
Earnings in 45D
Earnings Context
November 5. Consensus not provided; historical pattern shows high volatility around prints as shorts cover on any positive surprise. Key metrics: North America GMV trends, EBITDA margin trajectory, and any strategic commentary (asset sales, go-private interest). The company has missed expectations frequently.
Key Risk
Thesis invalid on a close back below \$19.50 (prior resistance) or on any revenue/GMV miss at the November 5 print that signals continued secular decline. Also vulnerable to macro consumer weakness.
Analysis
Volume 2.4x and rs_vs_spy +25.9 are constructive, but RS line not at new highs, prox_52w only 73.7, and below 50MA (failed prior base). The 15% move is likely short-covering in a speculative micro-cap, not institutional accumulation. Communications sector tailwind considered but fundamentals are weak. Disconfirming evidence: declining secular position and high earnings volatility-this is a gamble, not a setup. Conviction: Low.
Signal: Close above \$22.05 on vol >2.4x of 20d avg
Vol vs Avg: 2.39x

TASK

TaskUs, Inc.

\$8.65

+6.53%

RS vs SPY: +78.7%

B STRONG SETUP

\$0.8B Cap | 29M Float

Information Technology Services | Theme: AI Content Moderation | 52W Hi: 48% | Base Tight: 3.26 | Vol: 2.0x | RS/SPY: +78.7% | Above 20MA: YES | EARNINGS IN 45D

Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
6.5% move on continued momentum from AI model training and content moderation demand (TaskUs provides human-in-the-loop services for LLM training, Trust & Safety). Forward catalyst: November 5 earnings where the company can demonstrate margin expansion and incremental AI services revenue from hyperscaler clients; any new contract wins (OpenAI, Meta, Google) would extend the move.
BUSINESS & POSITION
TaskUs is a digital outsourcing provider specializing in content moderation, customer experience, and AI training data annotation for technology platforms. The company has pivoted toward AI services (labeling, RLHF, Trust & Safety for LLMs), positioning as a picks-and-shovels play on GenAI adoption without direct model risk.
FACTOR & THEME
Direct exposure to AI infrastructure buildout-every foundation model requires massive human labeling and moderation at scale. Also benefits from platform regulation (trust & safety mandates) and customer experience outsourcing trends. Theme momentum is accelerating as hyperscalers ramp model training and safety compliance. Technology sector tailwind (+0.5).
BREAKOUT SIGNAL
Close above \$8.65 on vol >2.0x of 20d avg
INSTITUTIONAL
Volume 2.0x on a 6.5% move with rs_vs_spy +78.7 (elite relative strength) suggests institutional positioning. The company is a known growth-fund holding (Tiger Global, PointState) with clear AI narrative. No insider activity in the window, but the technical setup (above 20MA+50MA, tight base forming) signals accumulation. Float 28.7M provides liquidity.
EARNINGS
EARNINGS IN 45D
EARNINGS CONTEXT
November 5. Consensus not provided; key metrics are AI services revenue mix, gross margin trajectory (AI annotation is higher-margin than legacy CX), and commentary on hyperscaler budget outlook. Historical pattern: beats have triggered 15-20% re-ratings as the market reprices the AI optionality.
KEY RISK
Thesis invalid on a close back below \$8.00 (20MA support) or on any revenue miss at the November 5 print that signals hyperscaler spending slowdown. Also vulnerable if AI labeling gets commoditized or automated (OpenAI's rumored synthetic data push).
ANALYSIS
RS_vs_spy +78.7 is elite, and the AI services narrative is durable with a clear November 5 catalyst. However, prox_52w 47.8 (far from highs), RS line not at new highs, and base_tight 3.26 (acceptable but not textbook) keep this as a strong B rather than A. Technology sector tailwind considered. Disconfirming evidence: the stock is only halfway back to prior highs, suggesting prior bagholders may sell into strength. Conviction: Medium.
Signal: Close above \$8.65 on vol >2.0x of 20d avg
Vol vs Avg: 2.0x
