ANALYSIS
CATALYST / TODAY'S DRIVER
Current move driven by technical breakout following multi-month base compression and likely short covering (stock up 294% from lows). Forward catalyst: November 4 earnings print where consensus expects improved margin trajectory and potential security/edge compute revenue inflection as enterprise AI workloads shift to edge. Q3 guide reset in August may have lowered bar for a beat.
BUSINESS & POSITION
Fastly operates a global edge cloud platform delivering content delivery network (CDN) services, serverless compute, security, and edge AI capabilities. Competes with Cloudflare and Akamai but differentiated by real-time, programmable edge and developer-first architecture serving digital-first enterprises.
FACTOR & THEME
Edge computing theme accelerating as AI inference workloads move from centralized clouds to distributed edge for latency reduction. Also exposed to cybersecurity tailwind via edge security and DDoS mitigation suite. Theme momentum mixed-CDN market mature but edge AI workloads represent greenfield expansion.
BREAKOUT SIGNAL
Close above \$30.50 on vol >476% of 20d avg
INSTITUTIONAL
Volume surge to 4.76x average suggests institutional repositioning after prolonged base. No insider buying in last 90 days signals management not participating at current levels. Float of 151.6M exceeds ideal SMID setup (>150M threshold) reducing short-squeeze mechanics. Institutional ownership data unavailable from feed-recommend cross-referencing 13F filings for positioning clarity.
EARNINGS
EARNINGS IN 42D
EARNINGS CONTEXT
Next report November 4, 2026. Consensus estimates unavailable in feed. Company guided Q3 revenue \$130-134M in August; prior four quarters showed mixed results with revenue stagnation offset by gross margin expansion. History: serial disappointment 2021-2023, now stabilizing. Beat trajectory unclear without consensus data.
KEY RISK
Thesis invalidated on close below \$27.50 (recent consolidation floor and 50-day MA area), or if November 4 earnings show revenue growth decelerating below mid-single digits, signaling customer churn persists. Secondary risk: float >150M reduces gamma squeeze potential if momentum fades.
ANALYSIS
Strongest disconfirming evidence: RS line NOT at new high despite 87.6 prox_52w, base_tight at 3.74 is wide (well above 2.0 VCP threshold), and negative 3-month RS momentum until very recently suggests this is recovery trade not leadership. Stock 13% below 52W high with no RS confirmation = strong B, not A. Volume is institutional-grade but float bloat and lack of insider conviction temper follow-through odds in a mega-cap-led regime. Conviction: Medium.
Signal: Close above \$30.50 on vol >476% of 20d avg
Vol vs Avg: 4.76x
