| Breakout to all-time highs (99.8% of 52W range) with RS line at new high on 2.85x volume, likely driven by institutional interest in real-world asset tokenization theme. Forward catalyst: Nov 11 earnings where any partnership announcements (SEC/banking integration) or AUM growth could extend move; also sensitive to crypto market regime shifts.                                                                                                                               |
| BUSINESS & POSITION                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Securitize provides compliance and issuance infrastructure for tokenizing real-world assets (real estate, private equity, funds) on blockchain rails. Early leader in regulated digital securities with Blackrock and other institutional pilots.                                                                                                                                                                                                                                       |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Blockchain infrastructure for traditional finance - direct leverage to the tokenization of trillions in illiquid assets. Theme is early-stage but accelerating with institutional adoption; recent momentum tied to stablecoin/CBDC regulatory clarity and TradFi experimentation.                                                                                                                                                                                                      |
| BREAKOUT SIGNAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Close above \$16.53 on vol >285% of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Tiny 8.4M float with 2.85x volume and RS line at new high - classic low-float institutional accumulation setup. Breakout to ATH suggests smart money positioning ahead of either earnings or a major partnership/regulatory catalyst. Technology sector leadership this week (+6.9% vs SPY) adds tailwind.                                                                                                                                                                              |

| Nov 11 earnings in 48 days. No consensus provided, but as a growth-stage software play, revenue growth rate and partnership traction (particularly with institutional asset managers) will drive the narrative.                                                                                                                                                                                                                                                                         |
| KEY RISK                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Thesis invalid on a close back below \$14.80 (prior resistance), or on any regulatory headwind for digital securities (SEC enforcement) or earnings miss on Nov 11. Tiny float = extreme volatility risk; 8.7 base_tight is very wide, suggesting erratic price action.                                                                                                                                                                                                                 |
| ANALYSIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| RS line at new high + breakout to 99.8% of 52W high + Technology sector leader = A-grade on pure technicals despite 8.7 base_tight. Strongest disconfirming evidence: extremely wide base (8.7 vs <2.0 ideal) and micro 8.4M float make this highly volatile and susceptible to sharp reversals; RS +28.9 is solid but not elite. Mixed macro regime and lack of visible near-term catalyst beyond earnings (48d away) also weigh. Conviction: Medium - setup is explosive but fragile. |
| Signal: Close above \$16.53 on vol >285% of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Elite RS +114.9 (highest in scan) + RS line at new high + 97.3% of 52W high + volume surge = A-grade despite 4.43 base_tight. Strongest disconfirming evidence: wide base and mixed macro regime reduce follow-through reliability; also, Healthcare is not a leading sector this week (Technology/Comms lead), so no sector tailwind. However, RS leadership is so extreme it overrides sector concern. Conviction: High - this is the strongest relative strength leader in the entire scan with a clear earnings catalyst 40 days out. |

| Breakout to fresh all-time high (100.0%) + RS line at new high + 1.82x volume + earnings catalyst in 41d = A-grade despite modest volume surge. Strongest disconfirming evidence: volume at 1.82x is barely above the scan threshold (1.5x), and Healthcare is not a leading sector this week; mixed macro regime also caps conviction. However, ATH breakout with RS line confirmation is a rare signal that overrides volume concern. Conviction: Medium - setup is clean but volume and macro are only adequate, not compelling. |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Catalyst / Today's Driver</b><br>Breakout to 98.4% of 52W high with RS line at new high and textbook VCP coil (base_tight 1.78) on 1.56x volume, signaling quiet institutional accumulation. Forward catalyst: Nov 5 earnings in 42 days where any Nerlynx revenue stabilization (HER2+ breast cancer) or pipeline update (ER+ expansion trials) could drive re-rating.                                                                                                                                                                                                 |
| <b>Business &amp; Position</b><br>Puma commercializes Nerlynx, an oral HER2-targeted therapy for early-stage and metastatic HER2+ breast cancer. Small-cap oncology play with single-product revenue base; upside tied to label expansion and international partnerships.                                                                                                                                                                                                                                                                                                  |
| <b>Factor &amp; Theme</b><br>Oncology specialty pharma - benefits from rising HER2+ breast cancer incidence and duration-of-therapy trends. Nerlynx competes in a crowded space (Herceptin biosimilars, Enhertu) but has niche in extended adjuvant setting.                                                                                                                                                                                                                                                                                                               |
| <b>Breakout Signal</b><br>Close above \$9.82 on vol >156% of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Institutional</b><br>Base_tight 1.78 is a textbook VCP coil - institutions absorbing supply without spiking price. RS line at new high + 98.4% prox_52w confirms accumulation into the Nov 5 earnings setup. Volume at 1.56x is modest, but the tight base signals quality over quantity.                                                                                                                                                                                                                                                                               |
| <b>Earnings</b><br>Earnings in 42D                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Earnings Context</b><br>Nov 5 earnings in 42 days. No consensus provided, but Nerlynx revenue trends (stabilization or growth) and any pipeline updates (ER+ breast cancer trials) will drive the narrative. If Puma is a serial beater, pre-earnings setup gains conviction.                                                                                                                                                                                                                                                                                           |
| <b>Key Risk</b><br>Thesis invalid on a close back below \$9.20 (VCP pivot support), or on any Q3 revenue miss or pipeline delay at Nov 5 print. Small-cap biotech with single-product risk; \$510M market cap = high volatility.                                                                                                                                                                                                                                                                                                                                           |
| <b>Analysis</b><br>Textbook VCP coil (base_tight 1.78) + RS line at new high + 98.4% prox_52w + earnings in 42d = A-grade despite modest 1.56x volume. Strongest disconfirming evidence: volume is barely above threshold, RS +22.5 is solid but not elite, and Healthcare is not a leading sector; mixed macro also weighs. However, the 1.78 base_tight is the tightest coil in the entire scan - a classic Quillamaggie edge signal indicating patient institutional accumulation. Conviction: Medium - setup quality is elite, but volume and macro temper enthusiasm. |
| <b>Signal: Close above \$9.82 on vol &gt;156% of 20d avg</b><br><b>Vol vs Avg: 1.56x</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Elite RS +82.6 and 3.52x volume surge to 98.7% prox_52w is A-grade on paper, but RS line NOT at new high (rsLineNewHigh=false) is a critical disqualifier per Qullamaggie methodology - it means leadership is NOT confirmed at this exact moment. Strongest disconfirming evidence: extremely wide base (8.86) suggests volatile, non-institutional price action despite the volume; also, Healthcare not a leading sector and mixed macro. Downgrade to B. Conviction: Medium - powerful move but lacks the clean RS leadership confirmation required for A-grade follow-through confidence. |
| Signal: Close above \$125.21 on vol >352% of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout to 88.1% of 52W high on 1.54x volume with solid RS +12.6, likely driven by positioning into Nov 2 earnings. Forward catalyst: Q3 print in 39 days where any medical device OEM order acceleration (surgical, wound care) or margin expansion could drive re-rating toward the \$338 52W high.

BUSINESS & POSITION

UFP Technologies designs and manufactures custom foam, plastic, and fiber-based components and packaging for medical devices, automotive, and consumer products. Leader in engineered solutions with sticky OEM relationships and high switching costs.

FACTOR & THEME

Medical device supply chain - benefits from elective surgery volume recovery and medical device innovation cycles. Niche exposure to reshoring (U.S.-based manufacturing) and single-use device demand.

BREAKOUT SIGNAL

Close above \$298.48 on vol >154% of 20d avg

INSTITUTIONAL

Tiny 7.5M float with 1.54x volume and 88.1% prox\_52w suggests quiet accumulation, but RS line NOT at new high and modest volume reduce conviction. Micro float = high beta; breakout into Nov 2 earnings suggests funds expect a beat.

EARNINGS

EARNINGS IN 39D

EARNINGS CONTEXT

Nov 2 earnings in 39 days. No consensus, but UFP historically beats on revenue and margin expansion; OEM order trends and guidance will drive the narrative. Pre-earnings setup gains conviction if UFP is a serial beater.

KEY RISK

Thesis invalid on a close back below \$285.00 (base pivot), or on any Q3 revenue miss or margin compression at Nov 2 print. Tiny 7.5M float = extreme volatility risk.

ANALYSIS

Solid base\_tight 2.87 and 88.1% prox\_52w with earnings in 39d = B-grade setup, but RS line NOT at new high and modest 1.54x volume prevent A-grade. Strongest disconfirming evidence: Healthcare not a leading sector, RS +12.6 is only modestly positive, and mixed macro caps follow-through. Micro 7.5M float is a double-edged sword - explosive if it works, but fragile. Conviction: Medium - clean setup but lacks volume and RS confirmation for high conviction.

|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Catalyst / Today's Driver</b><br>Strong RS +49.3 vs SPY and textbook VCP coil (base_tight 2.02) with 2.96x volume at only 64.8% of 52W high, suggesting early-stage institutional accumulation. Forward catalyst: Nov 4 earnings in 41d where any OTC (over-the-counter) consumer health guidance or generic drug pricing stability could drive breakout to the \$22.65 high.                                                                                                                                                                        |
| <b>Business &amp; Position</b><br>Perrigo is a leading supplier of store-brand OTC consumer healthcare products (pain relief, cough/cold, skincare) and generic Rx drugs. Dominant in U.S. private-label with steady cash flow but cyclical margin pressure from input costs.                                                                                                                                                                                                                                                                           |
| <b>Factor &amp; Theme</b><br>Consumer staples with healthcare exposure - benefits from private-label share gains as consumers trade down (recession-resistant) and OTC category growth (self-care trend). Generic Rx is a headwind (pricing pressure) but OTC is stable.                                                                                                                                                                                                                                                                                |
| <b>Breakout Signal</b><br>Close above \$14.68 on vol >296% of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Institutional</b><br>Textbook VCP coil (base_tight 2.02) with 2.96x volume and RS +49.3 = institutional accumulation at only 64.8% of range. RS line NOT at new high downgrades from A, but the tight base and strong RS suggest funds are building positions quietly ahead of Nov 4 earnings. Large 138M float absorbs volume well.                                                                                                                                                                                                                 |
| <b>Earnings</b><br>Earnings in 41d                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Earnings Context</b><br>Nov 4 earnings in 41 days. No consensus, but OTC consumer health trends (inflation impact on volumes) and generic Rx pricing will drive narrative. Pre-earnings setup suggests funds expect stabilization or upside surprise.                                                                                                                                                                                                                                                                                                |
| <b>Key Risk</b><br>Thesis invalid on a close back below \$13.80 (VCP pivot support), or on any Q3 revenue/margin miss or OTC volume weakness at Nov 4 print. Still 35% below 52W high at \$22.65 - needs a catalyst to break out of range.                                                                                                                                                                                                                                                                                                              |
| <b>Analysis</b><br>Strong RS +49.3 + textbook VCP coil (2.02 base_tight) + 2.96x volume = B-grade, but only 64.8% prox_52w and RS line NOT at new high prevent A-grade. Strongest disconfirming evidence: stock is not near breakout zone (needs to clear ~\$18-20 to escape the range), Healthcare not a leading sector, and mixed macro. This is an accumulation setup, not a breakout - institutional money is building but the trade is premature until it clears resistance. Conviction: Medium - early-stage positioning, not a buy-now breakout. |
