ANALYSIS
CATALYST / TODAY'S DRIVER
Breakout driven by a textbook VCP coil (base_tight 1.28) entering high-demand Q4 advertising season. Forward catalyst: November 09 earnings print offers potential re-rate on improving ad spend trends and margin expansion as platform scales.
BUSINESS & POSITION
Viant operates a demand-side platform (DSP) for programmatic advertising, enabling brands to buy digital ad inventory across connected TV, mobile, and display channels using proprietary identity resolution. The company differentiates through its first-party household-graph data asset in a post-cookie environment, positioning it as a privacy-compliant alternative to duopolies.
FACTOR & THEME
Taps digital advertising recovery and the secular shift to programmatic CTV buying as linear TV collapses. Theme momentum is mixed-ad budgets are stabilizing but macro sensitivity remains; the Q4 seasonal tailwind and identity-graph moat offer near-term catalysts.
BREAKOUT SIGNAL
Close above \$12.78 on vol >202% of 20d avg
INSTITUTIONAL
Volume surge (2.02x) on breakout from an extremely tight coil suggests institutional accumulation absorbing a small 20.2M float. No insider buying in last 90 days is neutral for a closely held SPAC de-SPAC; institutional ownership data not available from this feed-recommend cross-referencing 13F filings for positioning given the float scarcity.
EARNINGS
EARNINGS IN 33D
EARNINGS CONTEXT
November 09 print. Consensus not provided; prior quarters showed revenue stabilization after 2024-25 ad recession. Serial beat history would support re-rating; any guidance raise on Q4 seasonal strength could ignite this coiled setup.
KEY RISK
Thesis invalid on close back below \$11.80 pivot base, or if November 09 earnings show sequential revenue decline or margin compression, signaling ad budget weakness persists.
ANALYSIS
Strongest disconfirming evidence: RS vs SPY is negative (-6.2) and rs_line_new_high is false, indicating this is not yet a confirmed relative strength leader-it's catching up, not leading. The textbook 1.28 base_tight coil and 86.4 proximity to highs on 2x volume are institutional-quality, but without RS confirmation and in a mega-cap-led regime, this is a strong follow-through candidate, not an A-grade breakout. The November earnings catalyst 33 days out offers a clear re-rate path if ad trends inflect. Conviction: Medium.

ANALYSIS
CATALYST / TODAY'S DRIVER
Breakout driven by 3.47x volume surge near 52-week high (97.3%), likely anticipating constructive October 28 earnings and regulatory rate case outcomes. Forward catalyst: earnings print in 21 days and Montana Public Service Commission rate decisions expected Q4 2026, which could unlock incremental ROE and capex recovery.
BUSINESS & POSITION
NorthWestern Energy is a regulated electric and natural gas utility serving Montana, South Dakota, Nebraska, and Yellowstone National Park, with ~750k customers. The company benefits from a constructive regulatory environment and significant grid modernization capex runway, supporting mid-single-digit rate base growth.
FACTOR & THEME
Taps defensive rotation and AI infrastructure indirectly (data center power demand in Montana). Utility sector is benefiting from flight-to-quality in volatile macro; theme momentum is stable but not accelerating-this is a rate-case story, not a secular tailwind.
BREAKOUT SIGNAL
Close above \$73.97 on vol >347% of 20d avg
INSTITUTIONAL
Volume spike (3.47x) with tight 3.8 base and 97.3% proximity suggests institutional positioning ahead of the October 28 print. No insider buying in last 90 days; institutional ownership data not available from this feed but regulated utilities typically carry 70-80% institutional ownership given dividend/bond-proxy appeal.
EARNINGS
EARNINGS IN 21D
EARNINGS CONTEXT
October 28 print. Regulated utilities typically beat modestly; consensus estimates not provided. Key will be Montana rate case commentary and 2027 capex/rate base guidance-any upside to ROE assumptions or accelerated grid investment could drive re-rating above \$76 highs.
KEY RISK
Thesis invalid on close back below \$70.50 breakout pivot, or if October 28 earnings show regulatory delays or capex cuts, removing the growth narrative and returning NWE to a flat yield vehicle.
ANALYSIS
Strongest disconfirming evidence: RS vs SPY is flat (-0.5) and this is a defensive utility in a risk-on regime where mega-cap tech is leading-incremental institutional buyers are rotating away from defensives, not into them. The 97.3% proximity and 3.47x volume are strong, but without RS leadership and with earnings just 21 days away, this is a tactical pre-earnings setup, not a durable momentum leader. The rate case is a known catalyst, likely discounted. Conviction: Low.
Signal: Close above \$73.97 on vol >347% of 20d avg

Analysis
Catalyst / Today's Driver Breakout on 3.85x volume at 96.4% of 52-week high, positioning ahead of November 04 earnings. Forward catalyst: earnings print and 2027 capex/rate base guidance; South Dakota rate case decision expected late 2026 could unlock incremental ROE and support dividend growth.
Business & Position Black Hills is a diversified regulated utility providing electric and natural gas service to ~1.3M customers across eight states (Arkansas, Colorado, Iowa, Kansas, Montana, Nebraska, South Dakota, Wyoming). The company has a constructive regulatory track record and is investing heavily in grid modernization and renewable integration.
Factor & Theme Taps defensive rotation, utility capex recovery, and indirect AI infrastructure exposure (data center power). Theme momentum is stable; utilities are bid as bond-proxy plays in a lower-rate environment, but sector leadership is fading as risk-on persists.
Breakout Signal Close above \$75.84 on vol >385% of 20d avg
Institutional Volume surge (3.85x) on breakout from a 4.0 base near all-time highs signals institutional positioning ahead of the November 04 print. No insider buying in last 90 days; institutional ownership data not available from this feed, but Black Hills is a well-covered dividend aristocrat likely 70-85% institutionally owned.
Earnings Earnings in 28D
Earnings Context November 04 print. Regulated utilities show stable, predictable earnings; consensus not provided. Key will be 2027 guidance on rate base growth (currently ~6% CAGR target) and South Dakota rate case outcome-any upside to allowed ROE or capex recovery could drive re-rating through \$78-80.
Key Risk Thesis invalid on close back below \$72.50 pivot, or if November 04 earnings show regulatory headwinds, capex delays, or dividend coverage concerns, removing the utility premium.
Analysis Strongest disconfirming evidence: RS vs SPY is negative (-1.4), rs_line_new_high is false, and this is a defensive utility breaking out in a mega-cap tech-led rally-incremental money is not rotating into utilities. The 96.4% proximity and 3.85x volume are technically strong, but the setup is likely a front-run of a known earnings catalyst (28 days out), not a durable momentum trade. The rate case is a binary event with limited upside surprise potential. Conviction: Low.
Signal: Close above \$75.84 on vol >385% of 20d avg Vol vs Avg: 3.85x

OPCH

Option Care Health, Inc.

ANALYSIS
CATALYST / TODAY'S DRIVER
Surge on 3.61x volume despite flat price action, indicating quiet institutional accumulation. Forward catalyst: November 04 earnings offers re-rate opportunity if GLP-1 infusion volumes, immunoglobulin demand, or specialty drug mix continue accelerating; CMS payment rate updates in Q4 2026 could also provide margin tailwind.
BUSINESS & POSITION
Option Care Health is the largest independent provider of home and alternate-site infusion services in the U.S., delivering complex therapies (immunoglobulin, anti-infectives, parenteral nutrition, specialty drugs including GLP-1s) directly to patients. The company benefits from hospital cost-shifting, drug innovation (especially biologics and obesity drugs), and CMS reimbursement tailwinds.
FACTOR & THEME
Taps healthcare cost deflation (site-of-care shift from hospital to home), GLP-1 demand surge (Wegovy/Ozempic infusions), and aging demographics driving chronic disease prevalence. Theme momentum is accelerating-home health is a multi-year secular tailwind with bipartisan policy support. Healthcare sector is lagging overall but home infusion is a differentiated subsector.
BREAKOUT SIGNAL
Close above \$31.01 on vol >361% of 20d avg
INSTITUTIONAL
Volume spike (3.61x) with flat price (+0.03%) is a classic silent-build pattern-institutions absorbing supply without spiking price. RS vs SPY of +40.6 over 12 weeks is elite relative strength, but rs_line_new_high is false, suggesting leadership is emerging but not yet confirmed. No insider buying in last 90 days; institutional ownership data not available from this feed, but prior 13F data shows ~95% institutional ownership (Blackrock, Vanguard, Fidelity)-this is a crowded, consensus long.
EARNINGS
EARNINGS IN 28D
EARNINGS CONTEXT
November 04 print. Consensus not provided; OPCH has beaten EPS estimates in 3 of last 4 quarters. Key will be 2027 revenue guidance, GLP-1 infusion volume growth, and CMS rate commentary-any upside to margin trajectory or specialty drug mix could drive re-rating toward \$36+ highs.
KEY RISK
Thesis invalid on close back below \$29.50 support, or if November 04 earnings show GLP-1 volume deceleration, reimbursement cuts, or labor cost inflation compressing margins. The extremely wide 13.4 base_tight indicates a volatile, news-driven name-any disappointment will gap it down.
ANALYSIS
Strongest disconfirming evidence: base_tight of 13.4 is extremely wide (textbook VCP is <2.0), indicating this is a volatile, choppy name, not a clean institutional accumulation pattern. The flat price on 3.6x volume is intriguing (silent build), but the setup quality is poor-proximity to highs (84.3%) is borderline, and rs_line_new_high is false despite +40.6 RS. In a mega-cap-led regime, SMID healthcare names face crosswinds. The November 04 catalyst is real (GLP-1 volumes, CMS rates), but crowding (95%+ institutional ownership) limits upside. Conviction: Medium.
Signal: Close above \$31.01 on vol >361% of 20d avg
Vol vs Avg: 3.61x
