Stop: \$7.90 (base low and 50-day MA support)

CATALYST INTELLIGENCE

EARNINGS

Nov 11 - Street expects ~\$0.09 EPS on ~\$85M revenue. Last 4 quarters show consistent beats (3 of 4 EPS beats, all revenue beats). Company raised FY guidance last quarter citing enterprise wins. Forward P/E 22x reasonable for 22% revenue growth profile transitioning to profitability.

BUSINESS & POSITION

Riskified provides AI-driven fraud prevention and chargeback guarantee solutions for e-commerce merchants, assuming liability for approved transactions. The company operates a network-effect moat where more transaction data improves model accuracy, serving enterprise clients like Wayfair, Prada, and Wish.

FACTOR & THEME

Direct exposure to e-commerce growth recovery and AI/ML infrastructure spend; sentiment accelerating as digital fraud losses projected to exceed \$48B globally by 2027. Peer Forter remains private; RSKD is the pure-play public proxy for this vertical.

NEWS FLOW

Q2 2026 results showed 22% YoY revenue growth with improving gross margins; management highlighted Fortune 500 pipeline expansion. No recent M&A or partnership announcements, but sector peer activity (Signifyd funding round in August) validates TAM. Catalyst type: Earnings (High impact) - profitability inflection narrative building.

INSTITUTIONAL

Vol dry-up with price at 52-week highs suggests quiet institutional accumulation into the coil; RS line at new high confirms relative demand. Zero insider buying in last 60 days - neutral signal for a founder-led Israeli tech company. Float of 54M shares with \$1.1B market cap positions this in growth fund sweet spot.

KEY RISK

Thesis invalid on a close below \$7.90 (base low/50-day MA confluence), or if Q3 guidance disappoints on enterprise deal timing - customer concentration in top 10 merchants (~45% of rev) creates lumpiness risk.

Textbook RS line behavior with price coiling at 52-week high and confirmed vol dry-up, but base_tight at 6.64 is too loose for A-grade - price has oscillated rather than compressed. Earnings catalyst in 33 days is slightly outside ideal 2-week window. The strongest bear case: forward P/E of 22x prices in profitability that hasn't yet materialized, and a guidance miss would quickly fill the base. Conviction: Medium.

Stop: \$48.00 (base low and key support from September consolidation)

CATALYST INTELLIGENCE
EARNINGS
Nov 05 - Pre-revenue company; Street expects -\$0.29 EPS loss on minimal revenue. Valuation metrics (P/S of 3,239x) are meaningless - this is a clinical-stage binary situation. Focus is on CellFX commercialization progress and pipeline milestones rather than earnings per se.
BUSINESS & POSITION
Pulse Biosciences is developing a proprietary Nanosecond Pulsed Field Ablation (nsPFA) platform called CellFX for dermatology and potential cardiac ablation applications. The technology uses precisely calibrated electrical pulses to eliminate targeted cells while preserving surrounding tissue - a potential paradigm shift in soft tissue ablation.
FACTOR & THEME
Healthcare sector is #2 performer (+1.8% 20d) providing tailwind. MedTech innovation theme has mixed sentiment - GLP-1 dominance is crowding out capital allocation to other healthcare subsectors. No direct peers; closest comp is Biosense Webster (J&J) in cardiac ablation, but nsPFA is differentiated technology.
NEWS FLOW
CellFX System received FDA clearance for dermatologic procedures in 2023; commercial launch ongoing with limited initial uptake. Company pursuing additional indications including potential cardiac applications which would dramatically expand TAM. No recent PDUFA dates or major clinical readouts announced. Catalyst type: Corporate (High impact) - any indication expansion news would be transformational.
INSTITUTIONAL
STRONG INSIDER SIGNAL: 4 C-suite buys totaling \$200K in last 60 days (insider_cluster = 14). This is a top-tier conviction indicator - senior management betting personal capital on the setup. Vol dry-up with 36% contraction confirms institutional accumulation. However, 14.7% short interest (5.2 days to cover) creates squeeze potential but also reflects fundamental skepticism.
KEY RISK
Thesis invalid on close below \$48.00 (base low), or on any negative clinical data or FDA communication - binary nature of pre-revenue MedTech means 50%+ drawdowns are possible on adverse events. High short interest (14.7%) reflects legitimate skepticism about commercialization trajectory.

Exceptional RS (+107% vs SPY) and strong insider cluster (4 C-suite, \$200K) upgrades what would otherwise be a C-grade due to RS line NOT at new high. Per GRADE UPGRADE RULE: insider_cluster of 14 with risk-on macro warrants upgrade consideration, but pre-revenue status and binary clinical risk cap this at B. Base_tight 2.27 is acceptable. Strongest bear case: CellFX commercial adoption has been slower than projected, and the dermatology TAM alone may not justify \$3.8B valuation - cardiac indication is speculative. Conviction: Medium.

Target: \$98.00 (measured move from \$18 base depth; analyst target \$101 provides confirmation)

Stop: \$70.00 (base low and key support)

CATALYST INTELLIGENCE

EARNINGS

Nov 02 - Street expects ~\$0.88 EPS on ~\$220M revenue. Beat history appears consistent. Forward P/E 21.6x on 47% revenue growth is reasonable. PEG of 0.94 suggests undervaluation relative to growth.

BUSINESS & POSITION

Solaris Energy Infrastructure provides distributed power generation solutions and equipment to the oil & gas sector, with emerging pivot toward data center and AI infrastructure power needs. The company's modular power systems are increasingly relevant as hyperscalers seek flexible, rapid-deployment electricity solutions.

FACTOR & THEME

Direct exposure to AI infrastructure power theme - data centers are expected to consume 8% of US electricity by 2030 vs 3% today. Energy sector +0.9% (lagging but stabilizing). Peer read-through: POWL and VRT have shown strength on similar data center power narratives.

NEWS FLOW

Company has discussed data center power opportunities on recent calls; no specific contract announcements in last 60 days. Very high short interest (24.9%, 5.7 days to cover) reflects skepticism about transition narrative and oil & gas exposure. Catalyst type: Earnings (High impact) - any data center contract win would be transformational. INSIDER ACTIVITY: 2 buys totaling \$501K in last 60 days - meaningful dollar size but no C-suite involvement (cluster = 4).

INSTITUTIONAL

Insider buying (\$501K, 2 buyers) is notable but cluster score of 4 doesn't meet upgrade threshold (no senior officers). Vol dry-up confirmed with strict week-over-week contraction. The 24.9% short interest is extreme - squeeze potential exists but also reflects fundamental concerns about oil & gas cyclical.

KEY RISK

Thesis invalid on close below \$70.00 (base low and 50-day MA), or if data center pivot fails to materialize in guidance - core oil & gas business is cyclical and would trade at significant discount multiple without growth narrative.

Strong vol dry-up (strict) and attractive thematic exposure (data center power), but base_tight 5.28 is loose and RS line not at new high (+6.3% vs SPY is modest). Insider buying (\$501K) is supportive but doesn't meet cluster threshold for upgrade. 24.9% short interest creates asymmetric squeeze potential if earnings confirm data center traction. Strongest bear case: the 'data center pivot' is management positioning, not yet revenue reality - core business remains oil-field services in a volatile commodity environment. Conviction: Medium.

Close above \$31.70 on volume >200% of 20-day avg (580K shares)
Target: \$37.00 (measured move from \$5.50 base depth added to pivot)
Stop: \$29.50 (base low and 20-day MA)

CATALYST INTELLIGENCE
EARNINGS
Oct 28 - Street expects ~\$0.34 EPS on ~\$72M revenue. Beat history is inconsistent (2 of 4 quarters beat on EPS). Forward P/E 22.7x on modest 11% revenue growth is fair but not cheap. PEG of 22.8x suggests market isn't pricing in acceleration.
BUSINESS & POSITION
Radware provides application delivery and cybersecurity solutions including DDoS protection, WAF, and bot management for enterprises and carriers. An Israeli-headquartered company with 25+ years in the space, it competes against Cloudflare, Akamai, and F5 but maintains niche strength in hybrid cloud and carrier segments.
FACTOR & THEME
Core cybersecurity theme remains in secular growth, though sentiment has decelerated from 2022-2023 peaks as budget normalization occurs. Peer read-through: FTNT and PANW have shown mixed signals; enterprise security budgets shifting toward platform consolidation hurts point-solution players like RDWR.
NEWS FLOW
Limited news flow in last 60 days; no major contract wins or product launches announced. Company presented at Goldman Sachs Communacopia in September with no material guidance changes. Catalyst type: Earnings (Medium impact) - needs beat-and-raise to break out of multi-year malaise.
INSTITUTIONAL
Vol dry-up confirmed but RS line is NOT at new high (-4.5% vs SPY) - this is a laggard coiling, not a leader. No insider activity. The tight base (1.59) is structurally attractive but lacks the relative strength confirmation required for high-conviction setups.
KEY RISK
Thesis invalid on a close below \$29.50 (20-day MA and base low), or on any guidance cut at Oct 28 print - legacy on-prem business in structural decline creates persistent growth headwind.

Tight base (1.59) with confirmed vol dry-up, but RS line lagging SPY by 4.5% disqualifies this from higher consideration - a breakout into relative weakness rarely sustains. Earnings in 19 days could catalyze, but need RS to confirm leadership first. Conviction: Low.

EARNINGS

Nov 05

Exceptional fundamentals (100% ROE, 76% rev growth, 2,245% earnings growth) and strong RS (+57.6% vs SPY), but VCP structure is inconsistent - W2 vol dropped sharply then W3 spiked, not a clean stair-step dry-up. RS line not at new high despite strong outperformance. 16.7% short interest creates overhang. Basic Materials sector lagging. Needs cleaner vol pattern to upgrade. Conviction: Low.

ENTRY TRIGGER

Close above \$93.49 on volume >140% of 20-day avg (1.34M shares)

Target: \$115.00 (measured move basis)

Stop: \$85.00 (base low)

CATALYST INTELLIGENCE

EARNINGS

Oct 27

Strong vol contraction (54%) but RS line lagging SPY (-4.7%) is disqualifying for higher grade. 6.4% to pivot is further than ideal for imminent breakout. 15.7% short interest (9.3 days to cover) reflects commercialization skepticism. Earnings in 18 days could catalyze but need RS confirmation first. Healthcare sector is favorable (+1.8%). Conviction: Low.
