CATALYST INTELLIGENCE

EARNINGS

November 12 - Pre-revenue biotech; consensus expects EPS of -$0.86 vs TTM -$4.19 (loss narrowing). No revenue to beat on. Key focus will be tarcocimab Phase 3 readout timing and commercial partnership discussions. Serial loss-printer but cash runway and pipeline updates are the actual catalysts.

BUSINESS & POSITION

Kodiak Sciences develops biopharmaceutical therapies for retinal diseases, with lead asset tarcocimab (KSI-301) - an anti-VEGF antibody biopolymer conjugate designed for extended durability in wet AMD, DME, and RVO. The company is positioned as a potential disruptor to Regeneron's Eylea franchise with a differentiated dosing interval advantage.

FACTOR & THEME

Taps into the high-value ophthalmology market (~$15B TAM for anti-VEGF) where durability improvements represent a massive unmet need. Biotech sentiment has recovered meaningfully in 2026 with Healthcare +8.1% over 20 days; peer read-throughs from successful retinal drug approvals (e.g., Apellis, Iveric) suggest institutional appetite for validated ophthalmology assets.

NEWS FLOW

Massive insider cluster (82 buys, $157M in last 60 days) signals extraordinary conviction - this is institutional-level accumulation rarely seen in small-cap biotech. Short interest elevated at 21.4% (2.4 days to cover) creates squeeze potential on positive news. Catalyst type: Corporate (insider accumulation) + potential pipeline update - Impact: HIGH.

INSTITUTIONAL

The 82-insider / $157M cluster is a top-decile signal - this represents coordinated conviction buying at levels typically seen only pre-catalyst in biotech. Volume dry-up (62% week-over-week contraction) with price holding near highs confirms quiet accumulation. Institutional ownership data unavailable from this feed, but the insider cluster functionally substitutes as smart-money validation.

KEY RISK

Thesis invalid on a close below $85.00 (base low / -12% from current), or on negative Phase 3 data readout for tarcocimab. Binary FDA/clinical risk is the primary bear case - a failed or delayed pivotal trial would crater the equity given no revenue base.

Textbook VCP structure with 62% vol contraction, RS +130% vs SPY, tight base (2.73), and extraordinary insider cluster ($157M/82 buys) that upgrades conviction materially. Healthcare sector leadership (+8.1%) provides tailwind. Disconfirming evidence: binary clinical risk on tarcocimab - a negative readout would invalidate the entire thesis regardless of technical setup. However, insider cluster of this magnitude suggests informed conviction on near-term catalyst. Grade upgraded from B to A per insider cluster rule. Conviction: High.

Close above $166.48 on volume >130% of 20-day avg (1.33M shares)

Target: $195.00 (measured move from $140 consolidation low to $166 pivot, projected)

Stop: $140.00 (consolidation low, -11% from current)

CATALYST INTELLIGENCE

EARNINGS

November 4 - Consensus expects revenue ~$45M (+25% YoY) with EPS loss of -$2.00. Focus is on Galleri test volume growth, employer channel expansion, and updates on NHS UK partnership. Company has been a serial top-line beater on volume metrics even as losses persist. Guidance on 2027 commercial ramp and potential CMS coverage pathway will move the stock.

BUSINESS & POSITION

GRAIL develops Galleri, a multi-cancer early detection (MCED) blood test capable of detecting 50+ cancer types from a single draw. The company is a category creator in liquid biopsy oncology screening, spun from Illumina with pioneering technology in methylation-based cancer detection.

FACTOR & THEME

Core exposure to the liquid biopsy/early detection megatrend - TAM estimated at $50B+ if MCED achieves guideline inclusion for average-risk screening. Healthcare sector leading (+8.1%); peer Exact Sciences and Guardant have shown positive stock action on early detection momentum. CMS coverage decisions and commercial traction are key sentiment drivers.

NEWS FLOW

RS line at new 52-week high with Healthcare sector leadership confirms institutional rotation into diagnostics. Earnings in 7 days is the key catalyst - Impact: HIGH (Earnings). Short interest elevated at 18.6% / 5.4 days to cover creates squeeze fuel on beat-and-raise. No recent insider activity (baseline). Watch for NHS UK expansion updates or CMS pre-coverage pathway news.

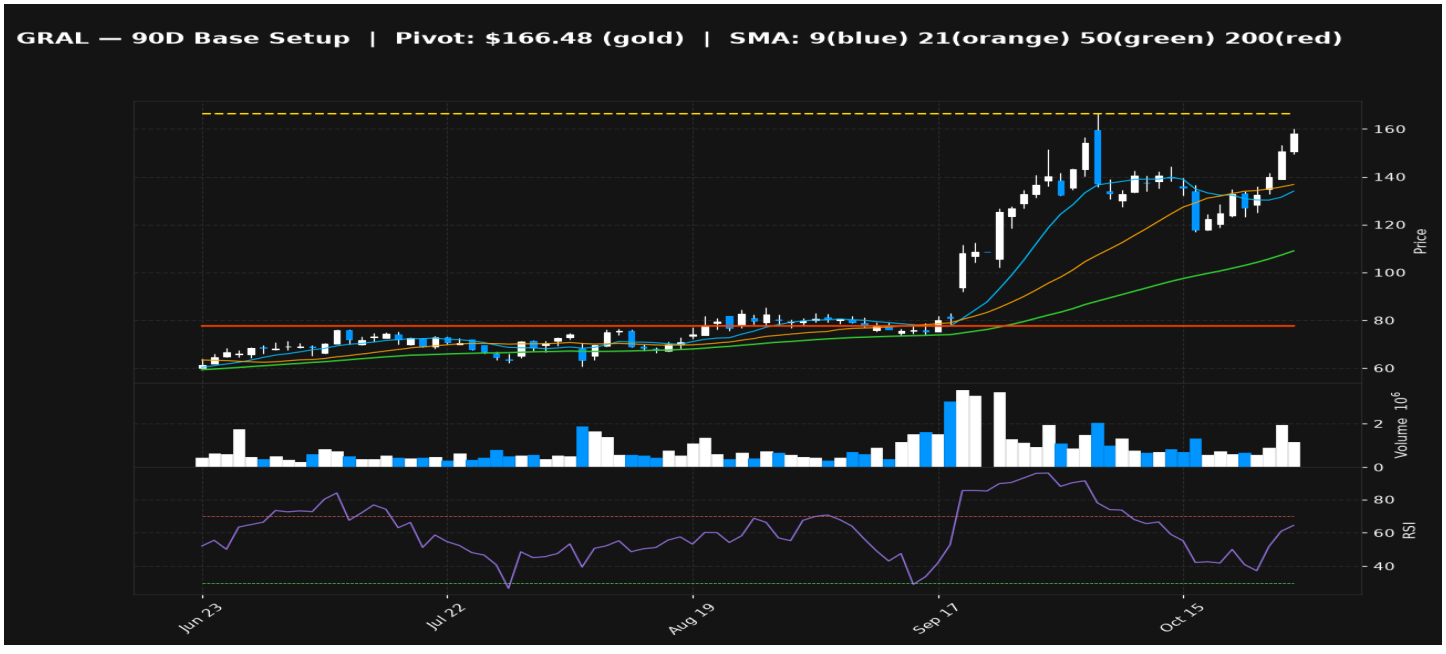

INSTITUTIONAL

Volume dry-up (vol_w1 < vol_w3) with RS line at new high suggests quiet accumulation into the print. Float is tight at 34.3M shares; institutional ownership data unavailable but the $7B market cap attracts growth-oriented healthcare funds. Short interest provides fuel for a squeeze on positive earnings surprise.

KEY RISK

Thesis invalid on a close below $140.00 (recent consolidation low, -11% from current), or on a revenue miss / slower Galleri volume growth at the Nov 4 print. Key bear case: reimbursement uncertainty - without broad CMS coverage, commercial adoption remains limited to self-pay and employer channels, capping TAM realization.

Strong RS line at new high (+127% vs SPY) with Healthcare sector tailwind and imminent earnings catalyst (7 days). Volume dry-up is present but not perfectly stair-stepping (w2 < w1 but w1 ~= w3), and base_tight at 3.63 is slightly loose for A-grade. High short interest (18.6%) adds squeeze potential. Disconfirming evidence: pre-revenue business model with -237% net margin means any volume growth disappointment will be severely punished. No insider activity to upgrade conviction. Conviction: Medium-High.

ENTRY TRIGGER

Close above $100.68 on volume >120% of 20-day avg (864K shares)

Target: $115.00 (measured move + sector leadership premium)

Stop: $92.00 (base low, -7% from current)

CATALYST INTELLIGENCE

EARNINGS

November 11 - Consensus expects EPS ~$2.50 (vs TTM $10.80 reflecting prior rate spike). Revenue growth was +239% TTM driven by exceptional spot rates. Serial beater on EPS given rate volatility. Forward PE compression (16.7x vs 9.2x trailing) reflects Street expectation of rate normalization - any beat on rate guidance will catalyze re-rating.

BUSINESS & POSITION

Okeanis Eco Tankers operates a modern fleet of eco-design crude oil tankers (VLCCs and Suezmaxes), benefiting from tight tanker supply and elevated freight rates. The company is a pure-play on crude tanker rates with one of the youngest, most fuel-efficient fleets in the industry.

FACTOR & THEME

Direct exposure to the tanker supercycle thesis driven by aging global fleet, limited newbuild orderbook, and geopolitical rerouting of crude flows. Energy sector is leading (+9.2% over 20 days), confirming risk-on appetite for energy logistics. Peer stocks (FRO, STNG, DHT) have shown strong momentum; tanker rates remain elevated.

NEWS FLOW

RS line at new high with Energy sector leadership confirms institutional appetite for tanker equities. Earnings in 14 days - catalyst type: Earnings, Impact: HIGH. Fleet utilization and forward rate guidance are key variables. No recent insider activity (baseline for non-US shipping co). Short interest modest at 6.1% / 1.4 days.

INSTITUTIONAL

Volume dry-up confirmed (15.6% contraction) with price holding within 2% of 52-week high - classic accumulation pattern. Float is tight at 20.8M shares; low beta (-0.06) suggests limited correlation to broad market moves, making this a sector-specific momentum play. Institutional ownership data unavailable.

KEY RISK

Thesis invalid on a close below $92.00 (base low, -7% from current), or on tanker rate guidance cut at Nov 11 earnings. Key bear case: freight rate normalization - if VLCC rates decline materially from current elevated levels, earnings power compresses rapidly and forward PE re-rates higher.

RS line at new high (+75% vs SPY), Energy sector leading (+9.2%), tight float, and earnings catalyst in 14 days. Volume dry-up present but not strict (w1 < w2), and base_tight at 3.21 is slightly loose. Industrials sector is lagging (-0.1%) which creates cross-sector headwind. Disconfirming evidence: forward PE expansion (9.2x -> 16.7x) signals Street expects earnings normalization - a guidance miss would confirm the bear case. No insider activity. Conviction: Medium.

ENTRY TRIGGER

Close above $19.54 on volume >120% of 20-day avg (1.88M shares)

Target: $24.00 (measured move from $17.50 base low to $19.54 pivot)

Stop: $17.50 (base low, -8% from current)

CATALYST INTELLIGENCE

EARNINGS

November 3 - Consensus expects EPS $0.34 and revenue ~$175M (+27% YoY). Forward PE of 13.9x vs trailing 72.8x reflects expected margin expansion. Company has shown consistent revenue beats. Key focus: education vertical growth (back-to-school seasonality) and healthcare pipeline conversion. Guidance raise would catalyze breakout.

BUSINESS & POSITION

Flywire provides vertical-specific payment solutions for education, healthcare, and travel, enabling complex cross-border transactions with integrated receivables management. The company is a niche leader in education payments (international student tuition) with expanding healthcare vertical traction.

FACTOR & THEME

Exposure to international education recovery and healthcare revenue cycle digitization. Fintech sentiment mixed; Technology sector lagging (-3.4% over 20 days) creates headwind for software names. However, education-focused payment rails benefit from structural international student enrollment growth.

NEWS FLOW

Earnings in 6 days is the primary catalyst - type: Earnings, Impact: HIGH. Short interest at 9.9% / 8.2 days creates modest squeeze potential. Technology sector lagging (-3.4%) is a headwind; however, Flywire's education vertical is less correlated to enterprise software weakness. No insider activity in last 60 days.

INSTITUTIONAL

20-day base with volume dry-up (16% contraction) and price holding near highs suggests patient accumulation. Float is adequate at 96.5M shares. Institutional ownership data unavailable. The tight earnings catalyst window (6 days) means the breakout resolution will be binary around the print.

KEY RISK

Thesis invalid on a close below $17.50 (base low, -8% from current), or on revenue miss / guidance cut at Nov 3 earnings. Key bear case: Technology sector weakness (-3.4%) and potential international student enrollment softness if macro deteriorates. Customer concentration in education vertical is a structural risk.

Solid 20-day base with volume dry-up and imminent earnings catalyst (6 days). Forward PE compression (72.8x -> 13.9x) suggests Street expects meaningful profitability inflection. However, RS line not at new high (+14.6% vs SPY is modest) and Technology sector is lagging (-3.4%), creating macro headwind for breakout conviction. Disconfirming evidence: sector underperformance and lack of insider buying reduce confidence in breakout sustainability. No grade upgrade warranted. Conviction: Medium.

Close above $14.50 on volume >140% of 20-day avg (574K shares)

Target: $18.50 (analyst target $19.50, using conservative measured move)

Stop: $12.50 (base low, -13% from current)

CATALYST INTELLIGENCE

EARNINGS

November 9 - Consensus expects EPS $0.20 and revenue ~$85M (+34% YoY). PEG of 0.96 suggests reasonable growth-adjusted valuation. Revenue growth acceleration (+34%) vs prior quarters is the key metric. Serial beater pattern not confirmed. Forward guidance on CTV mix and enterprise customer wins will be focal points.

BUSINESS & POSITION

Viant operates a demand-side platform (DSP) enabling programmatic advertising across connected TV (CTV), mobile, and desktop with proprietary identity resolution technology. The company is positioned as a privacy-first alternative to walled gardens, with particular strength in CTV programmatic buying.

FACTOR & THEME

Exposure to CTV advertising growth and privacy-centric ad tech shift post-cookie deprecation. Digital advertising sentiment is mixed; Technology sector lagging (-3.4%) creates headwind. However, CTV ad spend continues double-digit growth trajectory. Peer TTD (The Trade Desk) performance is a key read-through - recent weakness there is a caution flag.

NEWS FLOW

Strict volume dry-up confirmed (38% contraction) with earnings in 12 days - type: Earnings, Impact: HIGH. Short interest at 10.6% / 3.4 days provides squeeze fuel. CTV upfront commitments and Q4 holiday ad spend guidance are key variables. No insider activity. Technology sector headwind (-3.4%) is notable.

INSTITUTIONAL

Strict vol dry-up (vol_w1 < vol_w2 < vol_w3 confirmed at 38% contraction) with tight float (20.3M shares) is a quality accumulation signature. However, RS line not at new high and Technology sector lagging reduce conviction. Institutional ownership data unavailable.

KEY RISK

Thesis invalid on a close below $12.50 (base low, -13% from current), or on revenue miss / CTV growth deceleration at Nov 9 print. Key bear case: The Trade Desk competitive pressure and broader digital ad spend weakness in uncertain macro. Technology sector underperformance is an active headwind.

Strict volume dry-up (38%) is the strongest structural element - textbook contraction pattern. Tight float and earnings catalyst in 12 days. However, RS line not at new high, Technology sector lagging (-3.4%), and base_tight at 4.01 is loose for A-grade. Disconfirming evidence: peer TTD weakness and broader ad tech multiple compression suggest sector rotation away from programmatic. No insider activity. Conviction: Medium.

Target: $15.00 (short squeeze target + measured move)

Stop: $10.00 (psychological support, -11% from current)

CATALYST INTELLIGENCE

EARNINGS

November 5 - Consensus expects revenue ~$175M (+4% YoY) with EPS loss of -$0.17. Trailing PE of 124.8x reflects recent GAAP profitability; forward PE negative suggests loss resumption. SSS growth and Infinite Kitchen unit economics will be key. Serial beater pattern not established given recent profitability inflection.

BUSINESS & POSITION

Sweetgreen operates fast-casual restaurants focused on healthy, locally-sourced salads and bowls, with a technology-forward approach including its proprietary 'Infinite Kitchen' automated food assembly system. The company is a category leader in healthy fast-casual with a premium brand positioning.

FACTOR & THEME

Exposure to health-conscious consumer trends and restaurant automation. Consumer Cyclical is not in the leading sectors, but Consumer Staples (+8.1%) shows defensive appetite. The Infinite Kitchen automation rollout taps robotics/labor cost reduction themes. GLP-1 drug adoption is a potential tailwind for healthy eating behavior.

NEWS FLOW

Earnings in 8 days with RS line at new high - catalyst type: Earnings, Impact: HIGH. Short interest extremely elevated at 25.8% / 4.8 days to cover - significant squeeze potential on positive surprise. Infinite Kitchen deployment updates and unit economics disclosure could catalyze sentiment shift. No insider activity.

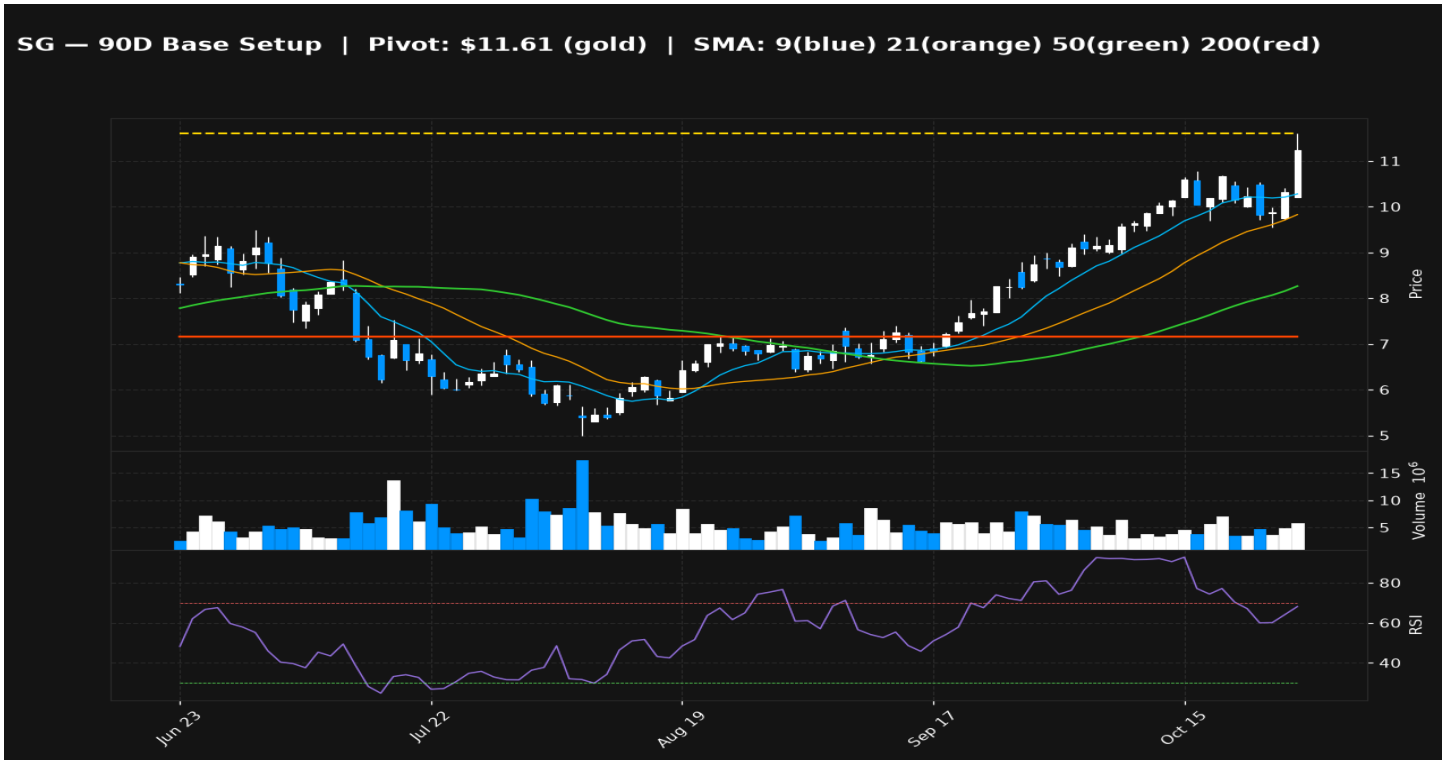

INSTITUTIONAL

RS line at new high (+70.5% vs SPY) despite Consumer Cyclical sector lag suggests stock-specific accumulation. However, volume dry-up is minimal (0.5% contraction) - not a clean VCP signature. Extremely high short interest (25.8%) creates asymmetric squeeze potential but also reflects strong bear conviction.

KEY RISK

Thesis invalid on a close below $10.00 (psychological support / -11% from current), or on SSS miss / Infinite Kitchen cost overruns at Nov 5 print. Key bear case: path to sustained profitability unclear - 25.8% short interest reflects institutional skepticism on unit economics at scale.

RS line at new high and massive short squeeze potential (25.8% SI, 4.8 days to cover) create asymmetric upside on positive earnings surprise. Earnings catalyst in 8 days. However, volume dry-up is minimal (0.5%), base_tight at 5.0 is loose, and forward earnings are negative. Disconfirming evidence: extremely high short interest often reflects informed bearish conviction - the crowd isn't always wrong. No insider buying to offset skepticism. Conviction: Medium.

ENTRY TRIGGER

Close above $21.49 on volume >150% of 20-day avg (375K shares)

Target: $25.50 (analyst target)

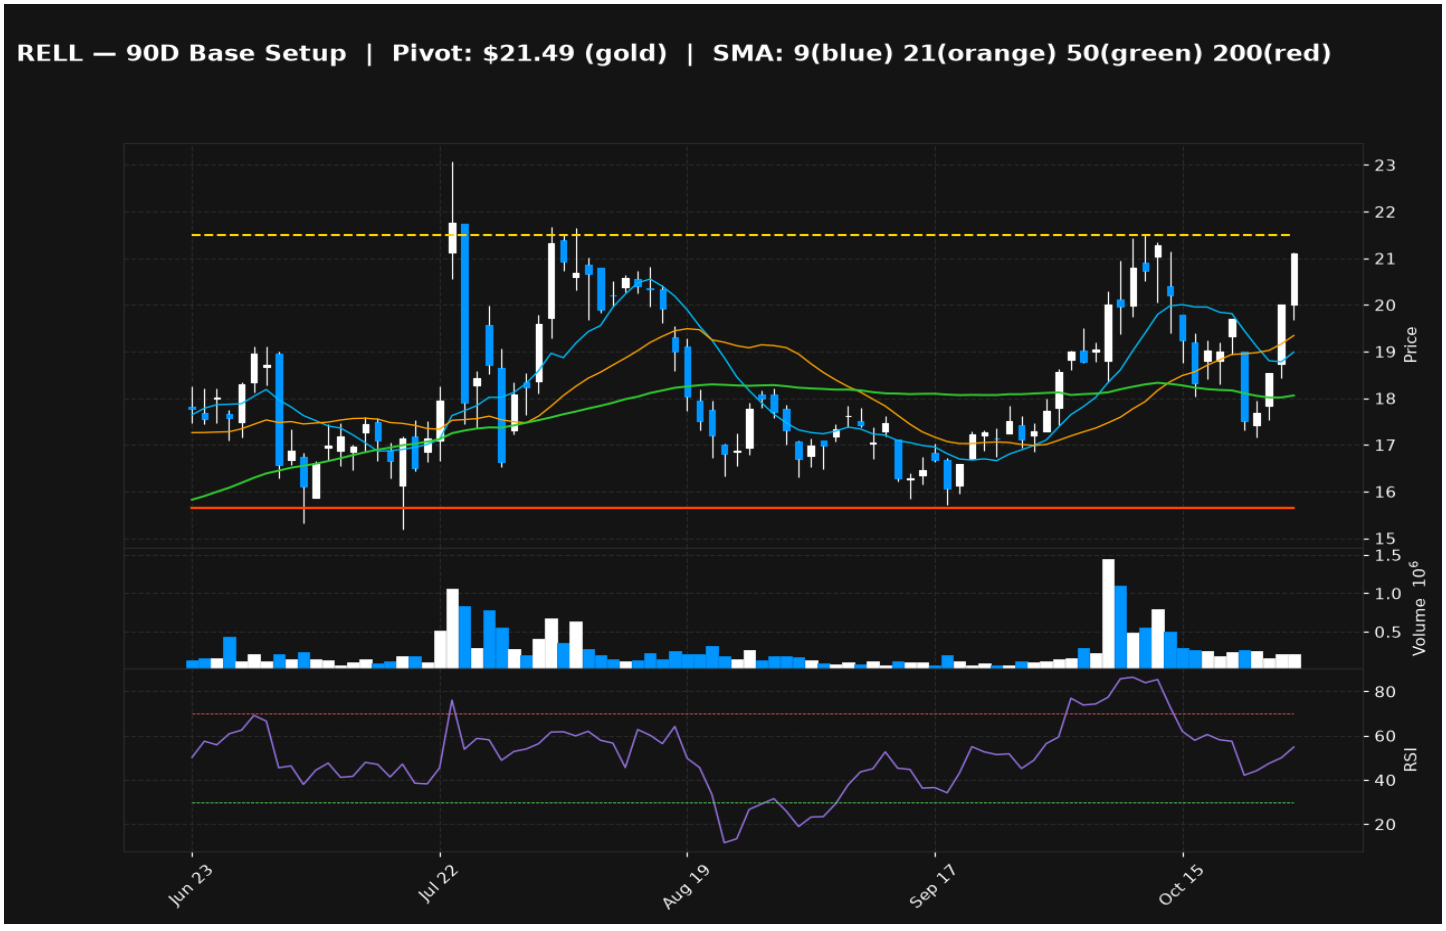

Stop: $18.50 (base low)

CATALYST INTELLIGENCE

EARNINGS

January 6

Strict volume dry-up (62%) is strong, but RS line not at new high (+12% is modest), Technology sector lagging (-3.4%), and no earnings catalyst for 70 days. Setup lacks alpha angle and forward catalyst - being early without a trigger is being wrong. Conviction: Low.

CATALYST INTELLIGENCE

EARNINGS

November 11

Extremely tight pivot (0.3% away) with strict vol dry-up, but RS vs SPY at only +2.4% shows no relative strength - stock is merely tracking the market. Healthcare sector leading but this name is lagging the sector. High short interest (18.9%, 9.9 days) and no insider activity. Conviction: Low.

RLAY

Relay Therapeutics, Inc.

$19.69

Pivot $19.70 | 0.1% away

Stop: $17.00 (base low)

CATALYST INTELLIGENCE

EARNINGS

November 5

At the pivot with earnings in 8 days, but RS vs SPY at only +0.9% indicates zero relative strength. Extremely high short interest (23.4%, 13.5 days to cover) could fuel a squeeze but also signals heavy institutional skepticism. Healthcare leading but this name is underperforming the sector. Monitor for RS improvement. Conviction: Low.
