ANALYSIS
CATALYST / TODAY'S DRIVER
Explosive post-earnings breakout to new 52W high on Aug 5 print (12 days out), likely driven by Q2 beat and margin expansion. Forward catalyst: next earnings (Aug 5) where sustained pricing power and reserve releases could re-rate valuation further amid favorable hard-market cycle.
BUSINESS & POSITION
Regional property & casualty insurer serving Massachusetts and New Hampshire personal and commercial lines. Benefits from hard-market pricing dynamics, rising premiums, and disciplined underwriting that is driving ROE expansion in an improving industry backdrop.
FACTOR & THEME
Financials sector leadership (+3.1% vs SPY this week) is a major tailwind. Insurance hard market and rate adequacy trends accelerating, with reserve releases and buyback potential adding fuel. Sector momentum is strong and extending.
BREAKOUT SIGNAL
Close above \$103.09 on vol >13x of 20d avg
INSTITUTIONAL
Volume 13.6x average signals clear institutional block buying into the earnings sprint. Small float (14.3M) and tight ownership create squeeze dynamics. No recent insider activity, but stock breaking out at new RS line high indicates smart money accumulation ahead of the Aug 5 print.
EARNINGS
EARNINGS IN 12D
EARNINGS CONTEXT
Next earnings Aug 5. Historical beat pattern and margin trajectory not provided, but the magnitude of today's move (+41%) suggests substantial positive surprise or guidance raise, setting high bar for follow-through at next print.
KEY RISK
Thesis invalid on a close back below \$95 pivot (prior resistance), or if Aug 5 earnings disappoint vs. the elevated expectations now priced in after this vertical move.
ANALYSIS
Five technical criteria met: massive vol surge, at 52W high, RS line new high, strong RS vs SPY, and Financials sector leadership. Disconfirming evidence: base_tight 18.85 is extremely wide (textbook is <2), indicating this is a parabolic spike, not a controlled breakout from a VCP coil-high probability of sharp pullback. However, earnings in 12 days provides a live forward catalyst, and the RS line new high confirms this is a genuine leadership candidate. Grade this as A with a catalyst, but conviction is Medium due to the wide base and risk of mean reversion before the next print. Conviction: Medium
Signal: Close above \$103.09 on vol >13x of 20d avg
Vol vs Avg: 13.6x

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings breakout (reported July 23) to new 52W high, likely on beat and strong holiday order guidance. Forward catalyst: next earnings (likely late Oct) where back-to-school and holiday season sell-through data will validate the licensing portfolio strength.

BUSINESS & POSITION

Toy and consumer products company with licensing focus (Disney, Nintendo, Pokemon). Micro-cap with volatile earnings but benefits from hit-driven content cycles and holiday retail demand surges.

FACTOR & THEME

Consumer discretionary recovery theme, with licensing leverage to blockbuster content (e.g., Disney franchises, gaming IP). Momentum is event-driven and seasonal; holiday 2026 sell-through is the key thesis driver over the next 3-6 months.

BREAKOUT SIGNAL

Close above \$25.06 on vol >3x of 20d avg

INSTITUTIONAL

Volume 3.1x average with RS line at new high and tiny float (9.1M) creates squeeze potential. No recent insider buying. Base is tighter than most in this scan (2.44 vs. ideal <2), close to institutional VCP quality. Micro-cap volatility is high, but the technical setup is clean.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported July 23. Details not provided, but +5.2% move to new 52W high suggests beat and/or strong guidance. Next print likely late October; track whether holiday pre-orders and retail inventory are building as expected.

KEY RISK

Thesis invalid on a close back below \$23.50 (prior resistance), or if holiday retail surveys weaken and toy category spending contracts, pressuring the licensing royalty model that drives margins.

ANALYSIS

Four of five A-grade criteria met: vol >3x, prox_52w 98.2, RS line new high, base_tight 2.44 (borderline VCP quality, close to the <2 threshold). Disconfirming evidence: RS vs SPY is modest (+10.1), and micro-cap (\$290M) with tiny float (9.1M) means this is a speculative, illiquid name vulnerable to violent reversals-not institutional-quality. Catalyst (earnings) is in the rearview; next print is ~3 months out. However, the technical criteria are sufficiently strong to warrant A-grade treatment for a momentum trade, with the understanding that risk management must be tight. Conviction: Medium

Signal: Close above \$25.06 on vol >3x of 20d avg

RS Line Hi	no
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
Technical breakout from a tight VCP base (base_tight 1.98, textbook quality), likely on improving credit metrics and loan growth visibility. Forward catalyst: next earnings (Oct 22, 90 days out) where consumer credit quality and origination volume will validate the fintech lending recovery thesis.
BUSINESS & POSITION
Online subprime and near-prime lender (consumer installment loans, small business finance). High-margin model benefits from normalization in credit losses and rising loan demand as consumer balance sheets stabilize post-inflation shock.
FACTOR & THEME
Financials sector leadership (+3.1% vs SPY) is a tailwind. Alternative credit and fintech lending recovery theme, with consumer credit normalization as the macro driver. Sector momentum is strong; watch for consumer delinquency trends as the key forward indicator.
BREAKOUT SIGNAL
Close above \$233.43 on vol >2x of 20d avg
INSTITUTIONAL
Volume 2.1x average with base_tight 1.98 (VCP-quality) signals institutional accumulation pattern-classic 'silent build' setup. RS vs SPY +36.1 confirms leadership. No recent insider activity, but the technical coil is textbook institutional absorption.
EARNINGS
EARNINGS IN 90D
EARNINGS CONTEXT
Next earnings Oct 22. No recent print provided. Track net charge-off rates, loan origination volume, and EBITDA margin trajectory-key operational KPIs for the alternative credit model.
KEY RISK
Thesis invalid on a close back below \$220 (base support), or if consumer delinquency rates spike and credit quality deteriorates, forcing higher reserves and margin compression in the subprime lending model.
ANALYSIS
Four A-grade criteria met: vol >2x, prox_52w 94.7, base_tight 1.98 (VCP-quality, rare in this scan), strong RS vs SPY +36.1. Disconfirming evidence: RS line is NOT at new high (critical Qullamaggie signal missing), and next earnings is 90 days out-too far to provide near-term catalyst support. Financials sector leadership provides +0.5 boost, and the VCP-quality base is institutional-grade. Grade A due to the technical setup quality, but conviction is Medium due to the missing RS line new high and distant catalyst. Conviction: Medium
Signal: Close above \$233.43 on vol >2x of 20d avg
Vol vs Avg: 2.1x

ANALYSIS
CATALYST / TODAY'S DRIVER
Strong Q2 earnings report (July 23) driving breakout to near 52W highs. Forward catalyst: next earnings (likely late Oct), plus any AI product announcements or enterprise contract wins as the company executes on margin expansion and free cash flow acceleration in the UCaaS recovery cycle.
BUSINESS & POSITION
Unified communications platform (cloud phone, video, messaging) serving enterprises. Operating leverage inflection as growth stabilizes and FCF margins expand, re-rating the stock from distressed SaaS to profitable compounder in a category rotation into software.
FACTOR & THEME
Software stabilization theme, with AI agent integration potential in enterprise communications. Mega-cap leadership regime is a headwind for SMID software, but RNG is carving out relative strength within the space as profitability narratives trump growth-at-any-cost.
BREAKOUT SIGNAL
Close above \$47.97 on vol >5x of 20d avg
INSTITUTIONAL
Volume 5.5x average with RS line at new high signals institutional re-engagement after a long base. Float is sizable (73M), so this is genuine accumulation, not a squeeze. No recent insider buying, but the technical breakout from a multi-quarter base suggests smart money repositioning ahead of the next leg.
EARNINGS
REPORTED
EARNINGS CONTEXT
Reported July 23 (yesterday). Details not provided, but the +24% move implies material beat and/or guidance raise. Next print likely late October; track whether management reaffirms the margin expansion roadmap and accelerates buyback activity.
KEY RISK
Thesis invalid on a close back below \$44 (prior resistance), or if software spending surveys weaken and enterprise IT budgets tighten into year-end, pressuring growth assumptions embedded in this valuation.
ANALYSIS
Strong vol surge, near 52W high, RS line new high, and solid RS vs SPY. Disconfirming evidence: base_tight 4.44 is wide (well above the VCP <2 threshold), indicating a volatile, loose base-not the controlled, institutional-quality coil Qullamaggie demands. Catalyst (earnings) is in the rearview; next print is ~3 months out, limiting near-term re-acceleration potential. Mega-cap leadership regime is a macro headwind for SMID software. Grade B due to missing the base tightness criterion for A and the catalyst gap. Conviction: Medium
Signal: Close above \$47.97 on vol >5x of 20d avg
Vol vs Avg: 5.5x

Analysis

Catalyst / Today's Driver

Riding Energy sector leadership (+9.2% vs SPY this week), likely technical breakout on sector rotation into energy services. Forward catalyst: next earnings (Oct 22, 90 days out) where margin expansion from higher fuel spreads and aviation recovery could drive estimate revisions.

Business & Position

Global energy procurement and logistics provider (formerly World Fuel Services), supplying marine, aviation, and land transportation fuel. Benefits from volatile energy markets, rising volumes in aviation recovery, and margin expansion in a tight supply environment.

Factor & Theme

Energy sector leadership is the primary tailwind (+9.2% vs SPY, strongest sector this week). Aviation recovery and marine fuel demand are secular accelerators. Theme momentum is strong and extending as oil stabilizes above \$70.

Breakout Signal

Close above \$39.76 on vol >3.8x of 20d avg

Institutional

Volume 3.9x average with RS line at new high confirms institutional buying into the sector rotation. RS vs SPY of +49.3 (strongest in this scan) marks this as a genuine leadership candidate. No recent insider activity, but the technical setup is institutional-quality despite the wide base.

Earnings

Earnings in 90D

Earnings Context

Next earnings Oct 22. No recent print or consensus provided. Track whether aviation fuel volumes and margin per gallon are accelerating sequentially-key operational KPIs for the energy services thesis.

Key Risk

Thesis invalid on a close back below \$37.50 (prior resistance), or if crude oil breaks below \$65 and energy sector leadership reverses, unwinding the sector rotation trade that is driving this breakout.

Analysis

Strong vol, near 52W high, RS line new high, and exceptional RS vs SPY (+49.3, highest in scan). Energy sector leadership provides macro tailwind (+0.5 grade boost). Disconfirming evidence: base_tight 4.14 is wide (ideal <2), and next earnings is 90 days out-too far to provide near-term catalyst support. Mega-cap leadership regime limits SMID follow-through potential even in strong setups. Grade B (would be C without the sector leadership and RS line new high). Conviction: Medium

Signal: Close above \$39.76 on vol >3.8x of 20d avg

Vol vs Avg: 3.9x

Analysis

Catalyst / Today's Driver

Post-earnings breakout (reported July 23) to new 52W high, likely on NIM expansion and credit quality improvement. Forward catalyst: next earnings (likely late Oct) where deposit growth and loan portfolio mix will validate the regional bank recovery narrative.

Business & Position

Florida-based regional bank with commercial and consumer lending focus. Benefits from rising rates (NIM expansion), deposit normalization, and potential M&A interest as a mid-sized consolidation target in a fragmented regional banking landscape.

Factor & Theme

Financials sector leadership (+3.1% vs SPY this week) is a tailwind. Regional bank stabilization theme, with credit normalization and deposit repricing driving ROE recovery. Sector momentum is strong; watch for Fed policy shifts that could extend or reverse the trend.

Breakout Signal

Close above \$28.14 on vol >2.5x of 20d avg

Institutional

Volume 2.7x average with RS line at new high signals institutional accumulation. Financials sector strength provides incremental buyer fuel. No recent insider activity. Float is moderate (34.8M), so this is liquid enough for institutional participation without squeeze mechanics.

Earnings

Reported

Earnings Context

Reported July 23. Details not provided, but +8.9% move to new 52W high suggests beat and/or positive guidance. Next print likely late October; track NIM trajectory, deposit costs, and loan loss reserve releases as key operational KPIs.

Key Risk

Thesis invalid on a close back below \$26.50 (prior resistance), or if regional bank credit deterioration resurfaces (CRE, office exposure) and the sector rotates out of favor on macro weakness.

Analysis

Strong vol, near 52W high, RS line new high, solid RS vs SPY, and Financials sector leadership. Disconfirming evidence: base_tight 3.46 is wider than ideal (VCP standard is <2), and catalyst (earnings) is in the rearview with next print ~3 months out. Mega-cap leadership regime limits SMID follow-through potential. Grade B; this is a sector-driven follow-through candidate, not a high-conviction breakout. Conviction: Medium

Signal: Close above \$28.14 on vol >2.5x of 20d avg

Analysis
Catalyst / Today's Driver
Post-earnings breakout (reported July 23) from a tight VCP base (base_tight 2.04), likely on beat and margin improvement. Forward catalyst: next earnings (likely late Oct) where boat sales and financing attachment rates will validate the consumer discretionary recovery in high-end leisure spending.
Business & Position
Largest recreational boat retailer in the U.S., also offering yacht brokerage, storage, and financing. Cyclical exposure to high-end consumer discretionary spending and marine leisure trends; benefits from inventory normalization and pent-up replacement demand.
Factor & Theme
Consumer discretionary recovery theme, with exposure to affluent consumer resilience. Inventory destocking cycle ending, creating easier comps for the next 2-3 quarters. Theme momentum is modest; this is a stock-specific turnaround, not a sector-driven move.
Breakout Signal
Close above \$35.98 on vol >2x of 20d avg
Institutional
Volume 2.1x average with base_tight 2.04 (VCP-quality) signals controlled institutional accumulation. Small-cap with moderate float (19.6M). No recent insider activity. Post-earnings breakout from a tight base is a classic setup, but RS line not at new high downgrades conviction.
Earnings
Reported
Earnings Context
Reported July 23. Details not provided, but +7.2% move suggests beat and/or positive guidance. Next print likely late October; track same-store sales, gross margin, and inventory turns as key operational KPIs for the marine retail model.
Key Risk
Thesis invalid on a close back below \$33.50 (base support), or if consumer spending surveys weaken and high-end discretionary categories (boats, RVs) contract on macro deterioration or rising unemployment.
Analysis
Strong vol, near 52W high, VCP-quality base (2.04), solid RS vs SPY. Disconfirming evidence: RS line is NOT at new high (Qullamaggie's #1 leadership signal missing), and catalyst (earnings) is in the rearview with next print ~3 months out. Small-cap cyclical retail is vulnerable in a mega-cap leadership regime. Grade B; the VCP base is excellent, but missing the RS line new high and forward catalyst downgrades conviction. Conviction: Medium
Signal: Close above \$35.98 on vol >2x of 20d avg

Analysis
Catalyst / Today's Driver
Technical breakout riding Energy sector leadership (+9.2% vs SPY this week), likely on offshore drilling activity acceleration and subsea services demand. Forward catalyst: next earnings (Oct 21, 89 days out) where deepwater project awards and margin expansion will validate the offshore E&P recovery thesis.
Business & Position
Subsea robotics, engineering, and offshore energy services provider. Benefits from rising offshore drilling activity, deepwater project FIDs, and demand for ROV services as E&P capex recovers in a higher-for-longer oil price environment.
Factor & Theme
Energy sector leadership (+9.2% vs SPY, strongest this week) is the primary tailwind. Offshore drilling and subsea services recovery theme, driven by oil majors accelerating deepwater projects. Theme momentum is strong and extending; watch oil prices and rig count trends.
Breakout Signal
Close above \$50.82 on vol >2x of 20d avg
Institutional
Volume 2.0x average with RS line at new high confirms institutional buying into the sector rotation. RS vs SPY +32.0 marks this as a leadership candidate. Large float (99.1M) means this is liquid institutional-quality size. No recent insider activity.
Earnings
Earnings in 89D
Earnings Context
Next earnings Oct 21. No recent print provided. Track backlog growth, ROV utilization rates, and margin per project-key operational KPIs for the offshore services model.
Key Risk
Thesis invalid on a close back below \$48 (prior resistance), or if crude oil breaks below \$65 and offshore E&P capex budgets are cut, reversing the sector rotation that is driving this breakout.
Analysis
Strong vol, at 52W high, RS line new high, solid RS vs SPY, and Energy sector leadership (+0.5 boost). Disconfirming evidence: base_tight 4.86 is very wide (well above VCP <2 threshold), indicating a loose, volatile base-not institutional coil quality. Next earnings is 89 days out (too far for near-term catalyst support). Mega-cap leadership regime limits SMID follow-through. Grade B; sector tailwind and RS line new high keep this in follow-through territory, but base quality and catalyst gap limit conviction. Conviction: Medium
Signal: Close above \$50.82 on vol >2x of 20d avg
Vol vs Avg: 2.0x
