ANALYSIS
CATALYST / TODAY'S DRIVER
Breakout driven by sustained refining margin expansion and energy sector rotation (Energy +6.8% vs SPY this week). Forward catalyst: Q3 earnings on November 6 with potential for elevated crack spreads amid tight product markets; continued sector momentum could drive rerating toward \$85-90 resistance.
BUSINESS & POSITION
Delek operates refining, logistics, and retail assets across the U.S., with strategic positioning in the Mid-Continent and Southwest. The company benefits from wide crack spreads and operational leverage when refined product demand exceeds crude supply, a dynamic that has accelerated in 2026.
FACTOR & THEME
Direct exposure to energy sector tailwinds (leading sector +6.8% vs SPY). Refining margins have been structurally elevated due to global product tightness and regional supply constraints. Theme momentum accelerating on geopolitical supply risks and domestic demand resilience.
BREAKOUT SIGNAL
Close above \$76.10 on volume >1.5x 20-day avg
INSTITUTIONAL
Volume 1.52x average suggests measured accumulation rather than panic buying. No insider activity in last 60 days. The textbook-tight base (1.15 ATR ratio) indicates quiet institutional absorption without retail frenzy-classic controlled build. Float rotation at 60M shares allows institutional participation without liquidity constraints.
EARNINGS
EARNINGS IN 54D
EARNINGS CONTEXT
Next print November 6 (54 days forward). Consensus expects continued margin strength; last four quarters showed volatile beat/miss pattern tied to crack spread timing. Serial beater status unclear, but Q3 will be critical for validating elevated margin sustainability into winter demand season.
KEY RISK
Thesis invalid on a close below \$72.50 (prior pivot/20MA support), or on any pre-announcement of crack spread compression ahead of the November 6 print. Refining margins are notoriously volatile; a sudden crude rally or product demand shock kills the trade immediately.
ANALYSIS
Textbook VCP coil (base_tight 1.15), 97% of 52W high, +58.5% RS vs SPY, and positioned in the week's leading sector (Energy +6.8%). Disconfirming evidence: RS line NOT at new high (critical Qullamaggie signal missing) and mixed macro regime reduces follow-through probability. However, the technical setup is pristine and sector tailwind is undeniable. Upgrade from B to A justified by sector leadership and coil quality. Conviction: Medium-High (would be High in risk-on regime).
Signal: Close above \$76.10 on volume >1.5x 20-day avg
Vol vs Avg: 1.52x

Analysis
Catalyst / Today's Driver
Breakout driven by sustained crude tanker rate strength amid longer-haul routes and OPEC+ supply adjustments. Forward catalyst: Q3 earnings November 5 with visibility into winter shipping demand and potential dividend/buyback announcements; tanker market fundamentals remain tight with limited newbuild supply through 2027.
Business & Position
International Seaways operates one of the largest U.S.-flag tanker fleets, specializing in crude and product transportation. The company captures elevated spot rates and benefits from long-haul trade patterns driven by geopolitical supply shifts and sanctions-related routing changes.
Factor & Theme
Energy sector leadership (+6.8% vs SPY) and exposure to crude tanker supply/demand imbalance. Secular tailwind from constrained tanker orderbook (historically low fleet growth) and persistent long-haul trade routes. Theme momentum strong but vulnerable to sudden geopolitical resolution or demand shock.
Breakout Signal
Close above \$103.65 on volume >1.8x 20-day avg
Institutional
Volume 1.89x average with 97.1% proximity to 52W high suggests measured institutional participation. No insider buying in last 60 days. Small float (41.5M) creates short-squeeze optionality if short interest elevated, though data not provided. The stock's +29.5% RS vs SPY over 12 weeks indicates sustained institutional preference within Energy rotation.
Earnings
Earnings in 53D
Earnings Context
Next print November 5 (53 days forward). Consensus likely models strong Q3 rates but uncertainty around Q4 visibility. Last four quarters' beat/miss history not provided, but tanker operators have generally exceeded estimates in 2025-2026 on spot rate upside. Key will be management's forward guidance on rate sustainability.
Key Risk
Thesis invalid on a close below \$98.00 (approximate base support), or on any tanker rate collapse signaled by Baltic Exchange indices ahead of the November 5 print. Tanker rates are highly cyclical; a sudden peace deal or demand shock unwinds the trade instantly.
Analysis
Exceptional RS (+29.5% vs SPY) and 97.1% of 52W high in leading sector. Disconfirming evidence: base too wide (3.41 ATR ratio, well above VCP threshold of <2.0) and RS line NOT at new high-missing the #1 early-leader signal. Mixed macro regime and lack of tight coil prevent A-grade despite sector strength. Solid follow-through candidate but not institutional-grade breakout. Conviction: Medium.

ANALYSIS

CATALYST / TODAY'S DRIVER

Explosive 7% single-day move on 3.9x volume suggests specific news catalyst (contract win, analyst upgrade, or partnership announcement-verify intraday filings). Forward catalyst: Q3 earnings October 29 with visibility into retail/supply-chain software demand heading into holiday fulfillment season; potential for raised FY guidance if retail end-market stabilizes.

BUSINESS & POSITION

SPS Commerce provides cloud-based supply chain management software, enabling EDI and omnichannel fulfillment for retailers and suppliers. The company benefits from secular shift to cloud-based supply chain visibility and integration, with sticky recurring revenue model and high switching costs.

FACTOR & THEME

Exposure to supply chain digitization and retail omnichannel trends. Limited direct AI exposure but tangential benefit from enterprise software spend recovery. Theme momentum mixed-retail end-market under pressure but supply chain efficiency demand remains resilient. Not a primary secular tailwind play.

BREAKOUT SIGNAL

Close above \$82.68 on volume >3.5x 20-day avg

INSTITUTIONAL

Volume surge to 3.9x average on +7% day is significant-likely institutional block buying or news-driven FOMO. No insider buying in last 60 days. Small float (35.6M) amplifies moves but also increases volatility risk. Need to verify if accumulation continues on day 2+ or if this is one-day exhaustion spike.

EARNINGS

EARNINGS IN 46D

EARNINGS CONTEXT

Next print October 29 (46 days forward). Consensus EPS/revenue estimates not provided. SPS has historically been a steady grower but not a serial beater; valuation sensitive to growth rate deceleration. Key will be retail end-market commentary and any impact from macro softness on new customer wins.

KEY RISK

Thesis invalid on a close back below \$77.50 (pre-breakout base), or on any follow-through failure (low volume day 2) suggesting exhaustion spike rather than durable breakout. Extended 28% below 52W high (\$114.87) limits immediate upside; resistance at \$90-95 range will be critical test.

ANALYSIS

Explosive volume (3.9x) and strong +7% day with excellent RS (+46.4% vs SPY). Disconfirming evidence: only 72% of 52W high (well below breakout zone >85%), RS line NOT at new high, and unknown catalyst source. The move looks impulsive rather than controlled. Mixed macro regime and distance from highs prevent A-grade despite volume strength. This could be day-1 of a re-accumulation campaign or a one-day spike-needs confirmation. Conviction: Medium (watch Monday's action).

Signal: Close above \$82.68 on volume >3.5x 20-day avg

ANALYSIS
CATALYST / TODAY'S DRIVER
Tanker rate strength driving sector rotation within Energy (leading sector +6.8% vs SPY). Forward catalyst: Q3 earnings October 28 with visibility into VLCC spot rates and potential for elevated dividend given strong cash generation; sustained long-haul crude routes support rate pricing power into Q4/2027.
BUSINESS & POSITION
DHT operates a modern fleet of VLCCs (Very Large Crude Carriers), benefiting from tight tanker supply and elevated spot rates driven by longer voyage distances and geopolitical trade shifts. The company is a high-beta play on crude tanker day rates with significant dividend upside in strong rate environments.
FACTOR & THEME
Direct exposure to Energy sector momentum and crude tanker supply/demand imbalance. Secular tailwind from constrained orderbook and persistent long-haul trade patterns. Theme accelerating but highly cyclical and vulnerable to demand shocks or geopolitical resolution.
BREAKOUT SIGNAL
Close above \$22.00 on volume >1.5x 20-day avg
INSTITUTIONAL
Volume 1.55x average is modest given 98.7% proximity to 52W high-suggests controlled buying rather than panic chase. Large float (144.9M) limits squeeze mechanics but allows institutional scale. No insider buying in last 60 days. RS +30.3% vs SPY confirms institutional preference within Energy rotation, but lack of volume surge raises liquidity absorption questions.
EARNINGS
EARNINGS IN 45D
EARNINGS CONTEXT
Next print October 28 (45 days forward). Consensus likely models strong Q3 spot rates but uncertainty around sustainability. DHT historically pays out significant cash via dividends when rates are elevated; dividend policy discussion will be key catalyst. Last four quarters' performance not provided but tanker sector generally beat in 2025-2026.
KEY RISK
Thesis invalid on a close below \$20.50 (approximate base/20MA support), or on any tanker rate collapse signaled by VLCC spot market ahead of the October 28 print. Base is extremely wide (3.78 ATR ratio)-this is not a controlled VCP setup, raising failure risk on any sector rotation or rate weakness.
ANALYSIS
At 98.7% of 52W high with strong RS (+30.3%) in leading sector (Energy +6.8%). Disconfirming evidence: base far too wide (3.78 ATR, nearly double acceptable VCP threshold), RS line NOT at new high, and volume surge modest (1.55x). The setup lacks institutional-grade coil quality. Large float and wide base suggest this is sector beta, not alpha. Conviction: Low-Medium.
Signal: Close above \$22.00 on volume >1.5x 20-day avg

Analysis
Catalyst / Today's Driver
Participation in Energy sector rotation (leading sector +6.8% vs SPY), driven by product tanker rate strength on global refined product demand. Forward catalyst: Q3 earnings October 29 with visibility into winter product tanker demand and potential special dividend given strong cash flow generation; tight product tanker supply supports rate floor through 2027.
Business & Position
Scorpio Tankers operates a modern fleet of product tankers (MR/LR1/LR2), specializing in clean petroleum product transportation. The company benefits from elevated product tanker rates driven by refinery capacity constraints, longer-haul trade routes, and low fleet growth due to limited orderbook.
Factor & Theme
Energy sector leadership (+6.8% vs SPY) and exposure to product tanker supply/demand imbalance. Secular tailwind from constrained newbuild orderbook and structural refining capacity shortfalls. Theme momentum strong but cyclical; vulnerable to demand shocks or sudden capacity additions.
Breakout Signal
Close above \$84.52 on volume >1.6x 20-day avg
Institutional
Volume 1.61x average is modest, and +0.01% daily change suggests drift rather than breakout. No insider buying in last 60 days. At 96.7% of 52W high, the stock is technically positioned but lacks volume confirmation. Small float (38.6M) allows institutional moves but current action suggests hesitation, not conviction.
Earnings
Earnings in 46D
Earnings Context
Next print October 29 (46 days forward). Consensus likely models strong Q3 product tanker rates but questions around Q4 visibility. Scorpio has historically paid significant dividends/buybacks in strong rate environments; capital allocation policy will be key catalyst. Last four quarters' beat/miss history not provided.
Key Risk
Thesis invalid on a close below \$80.00 (approximate base support), or on any product tanker rate collapse signaled by clean tanker indices ahead of the October 29 print. Base is wide (3.24 ATR ratio), and weak RS vs SPY (+4.2%) suggests this is sector beta, not alpha-vulnerable to any Energy rotation reversal.
Analysis
At 96.7% of 52W high in leading sector (Energy +6.8%). Disconfirming evidence: RS vs SPY is weak (+4.2%, barely positive), RS line NOT at new high, base too wide (3.24 ATR), and virtually flat daily performance (+0.01%) with modest volume suggests drift, not breakout. Missing all key Qullamaggie signals despite sector tailwind. This is sector participation, not leadership. Conviction: Low.
Signal: Close above \$84.52 on volume >1.6x 20-day avg
Vol vs Avg: 1.61x
