ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings momentum following Nov 4 report, driving to new 52W highs. Forward catalyst: pending regulatory updates on infectious disease pipeline (HIV/flu programs) and potential partnership announcements in Q1 2027, plus next earnings Feb 2027.

BUSINESS & POSITION

Vir develops immunology-based therapies for infectious diseases including HIV, influenza, and hepatitis B, leveraging monoclonal antibody platforms. The company has partnerships with GSK and differentiated assets in chronic viral infections.

FACTOR & THEME

Infectious disease biotech theme with renewed institutional interest post-COVID pivot. Benefits from broader healthcare sector leadership (+14.2% vs SPY this week) and biotech rotation into clinical-stage names with partnership validation.

BREAKOUT SIGNAL

Close above $13.85 on vol >385% of 20d avg

INSTITUTIONAL

Volume surge to 3.85x average signals institutional accumulation post-earnings. No recent insider buying in last 90 days. RS line at new 52W high confirms this is an emerging institutional leader, though base_tight of 4.19 indicates wider-than-ideal consolidation requiring cautious position sizing.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported Nov 4; beat/miss details not provided but price action suggests positive reception. Next print expected February 2027.

KEY RISK

Setup invalidates on close below $12.50 (20MA support zone) or any pipeline setback in HIV/flu programs before next catalyst. Wide base (4.19 ATR) increases volatility risk in Risk-Off regime.

ANALYSIS

RS line new high and Healthcare sector tailwind are compelling, but the 4.19 base_tight (wide vs. 2.0 threshold) and lack of insider conviction downgrade from A. Strongest disconfirming evidence: the wide base in a Risk-Off regime statistically increases failure rate. Post-earnings pop without tight coil setup = strong follow-through candidate but not textbook breakout. Conviction: Medium.

Signal: Close above $13.85 on vol >385% of 20d avg

Vol vs Avg: 3.85x

ANALYSIS

CATALYST / TODAY'S DRIVER

Strong Q3 earnings reported Nov 5, driving stock to within 3% of 52W highs. Forward catalyst: holiday season same-store sales data (Dec/Jan), Q4 earnings in Feb 2027, and ongoing store expansion reaching profitability inflection.

BUSINESS & POSITION

Warby Parker is a vertically integrated eyewear brand operating 250+ retail stores and a leading e-commerce platform, disrupting traditional optical retail with direct-to-consumer pricing. Recently achieved GAAP profitability with accelerating store economics.

FACTOR & THEME

Consumer discretionary recovery theme with omni-channel retail advantage. Benefits from sector rotation into profitable consumer growth (+11.2% vs SPY this week). Positioned in defensive healthcare spending category (vision correction) with discretionary brand appeal.

BREAKOUT SIGNAL

Close above $30.55 on vol >263% of 20d avg

INSTITUTIONAL

Volume 2.63x confirms institutional interest post-earnings. RS line new high validates leadership status. However, no insider buying in last 90 days removes conviction signal. At 97% of 52W high, incremental buyers must believe in continued comp acceleration and margin expansion.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported Nov 5; price action implies beat on both revenue and EPS with raised guidance. Next earnings expected February 2027. Track record of execution on store profitability targets critical to sustain multiple.

KEY RISK

Invalidates below $28.00 (breakdown from post-earnings range) or on any Q4 holiday comp deceleration. Base_tight of 5.16 signals extended consolidation, vulnerable to macro pullback in discretionary spending during Risk-Off regime.

ANALYSIS

RS line new high and Healthcare sector strength (+0.5 grade boost eligibility) support the setup, but base_tight 5.16 is too wide for A-grade and post-earnings extension carries reversal risk. Strongest disconfirming evidence: already up ~20% on the day at 97% of 52W high leaves limited cushion for profit-taking. Conviction: Medium.

Signal: Close above $30.55 on vol >263% of 20d avg

Vol vs Avg: 2.63x

ANALYSIS

CATALYST / TODAY'S DRIVER

Reporting earnings today (Nov 9); volume surge anticipates strong Q3 results. Forward catalyst: Q4/FY27 guidance on ASC volume recovery and margin expansion, potential M&A activity in fragmented outpatient surgery market, next print Feb 2027.

BUSINESS & POSITION

Surgery Partners operates 180+ surgical facilities and ancillary services, capitalizing on the structural shift from hospital inpatient to lower-cost ambulatory surgery centers. Leader in short-stay surgical procedures with payor tailwinds and aging demographics support.

FACTOR & THEME

Healthcare cost-reduction secular theme as payors and Medicare incentivize outpatient migration. Benefits from peak Healthcare sector momentum (+14.2% vs SPY). Defensive growth with recession-resistant procedure volumes and pricing power.

BREAKOUT SIGNAL

Close above $26.43 on vol >170% of 20d avg

INSTITUTIONAL

RS line at new high with +74.7 vs SPY is elite relative strength, signaling sustained institutional accumulation. Volume 1.7x (lower than peers) but RS leadership compensates. No insider buying in 90 days. Float of 58.8M allows for institutional block activity without excessive slippage.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Earnings TODAY (Nov 9). Consensus and beat history not provided; anticipate focus on same-facility case volume growth and EBITDA margin trajectory. Next print February 2027.

KEY RISK

Invalidates on earnings miss today or guidance cut, specifically a close back below $24.00. Base_tight of 8.14 is extremely wide, indicating choppy consolidation-this is an earnings-driven spike trade, not a technical coil breakout. Vulnerable to mean reversion in Risk-Off environment.

ANALYSIS

Exceptional RS (+74.7) and RS line new high in leading Healthcare sector earn strong consideration, but base_tight 8.14 disqualifies from A-grade-this is not a coiled breakout, it's an earnings-day spike. Strongest disconfirming evidence: earnings binary TODAY means holding into the print is speculation, not momentum investing. Post-earnings follow-through will depend entirely on guidance quality. Conviction: Low (pre-report); re-evaluate post-results.

Signal: Close above $26.43 on vol >170% of 20d avg

Vol vs Avg: 1.70x

ANALYSIS

CATALYST / TODAY'S DRIVER

Earnings TODAY (Nov 9) driving pre-announcement rally; anticipate strong transit-tech bookings or partnership wins. Forward catalyst: public transit contract awards in major cities (Q1 2027 visibility), potential profitability inflection, next earnings Feb 2027.

BUSINESS & POSITION

Via provides on-demand public transit software (TransitTech) and routing optimization for cities, paratransit agencies, and school districts globally. Operates in 35+ countries with SaaS model transitioning to profitability as enterprise contracts scale.

FACTOR & THEME

Smart-city infrastructure and public-sector digital transformation theme. Software-as-a-Service recurring revenue with government/municipal customer stickiness. Not AI-core but benefits from optimization algorithm differentiation in fragmented mobility software market.

BREAKOUT SIGNAL

Close above $44.28 on vol >153% of 20d avg

INSTITUTIONAL

RS line new high with +78.9 vs SPY is top-decile leadership. Volume only 1.53x (below 2x threshold for A-grade) but RS strength compensates. No insider buying in 90 days. Small float (57.9M) creates potential for squeeze dynamics if earnings beat drives institutional FOMO.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Reporting TODAY (Nov 9). Consensus unknown; watch for transit contract bookings growth, gross margin expansion, and path to positive FCF. Next earnings February 2027.

KEY RISK

Invalidates on earnings miss or weak FY27 guidance, specifically close below $38.00 (prior consolidation support). Base_tight 3.9 is moderately wide; this is an earnings anticipation move, not a technical coil. Exposure to municipal budget cycles and slower government sales in macro downturn.

ANALYSIS

Elite RS leadership (+78.9) and RS line new high are compelling, but earnings binary TODAY and volume only 1.53x keep this B-grade. Strongest disconfirming evidence: base_tight 3.9 and same-day earnings make this a speculative event trade, not a durable breakout. Risk-Off regime punishes earnings disappointments severely. Conviction: Low (pre-report); high potential IF earnings unlock profitability narrative.

Signal: Close above $44.28 on vol >153% of 20d avg

Vol vs Avg: 1.53x
