ANALYSIS
CATALYST / TODAY'S DRIVER
Explosive volume breakout to new 52W high on 7.89x average volume, likely driven by strong industry tailwinds in personal services post-downturn. Forward catalyst: November 12 earnings print (84 days out) where any beat on margin expansion in a recovering consumer environment could drive sustained re-rating.
BUSINESS & POSITION
Andersen Group provides personal services in a fragmented Consumer Cyclical vertical, positioned as a category consolidator capturing share during consumer recovery. The 178% YTD gain and RS line at new highs suggest the market is pricing in a structural acceleration in demand or margin leverage that has yet to be fully recognized by the Street.
FACTOR & THEME
Consumer recovery theme with tailwinds from normalization in discretionary spending and services demand. Sector momentum is accelerating-Consumer Discretionary is +6.6% vs SPY over the trailing period, making this a directionally aligned breakout in a risk-on macro backdrop.
BREAKOUT SIGNAL
Close above \$50.32 on vol >789% of 20d avg
INSTITUTIONAL
Volume surge to 7.89x on a tiny 10.7M float is characteristic of institutional block buying, not retail-float rotation of ~14% today alone. No insider buying in the last 60 days, but the explosive technical action and RS line at new high suggest smart money is positioning ahead of the November earnings catalyst. Small float amplifies volatility but also follow-through potential.
EARNINGS
EARNINGS IN 84D
EARNINGS CONTEXT
Next print November 12 (84 days out). Consensus data unavailable for this smaller-cap name, but the 31.2% outperformance vs SPY over 12 weeks and breakout to new highs suggests the market is pricing in a significant beat-and-raise scenario. History of prior beats unknown-monitor for guidance on the call.
KEY RISK
Thesis invalid on a close back below \$45.50 (approximate breakout pivot from prior consolidation), or on any revenue miss or cautious guidance at the November 12 print that signals consumer weakness is not abating as expected.
ANALYSIS
Five of six technical criteria met: vol >7x, prox_52w 99.1, rs_line_new_high true, rs_vs_spy +31.2, base_tight 2.14-this is a textbook Qullamaggie A-grade setup. Disconfirming evidence: no same-day news catalyst identified, raising the risk this is a momentum chase into a vacuum; small float (10.7M) creates two-way volatility risk. However, the RS line at new high is the single strongest early-leader signal, and the November earnings date provides a clear forward catalyst path. In a risk-on regime with Consumer Discretionary leading, this has institutional follow-through potential. Conviction: High.
Signal: Close above \$50.32 on vol >789% of 20d avg

RS Line Hi	YES
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
14.8% spike on 4.87x volume as MRVI reclaims its 52W high at \$8.38, likely reflecting sector rotation into beaten-down biotech tools/reagents plays as the sector stabilizes post-mRNA boom-bust cycle. Forward catalyst: November 5 earnings (77 days) where any stabilization in oligonucleotide demand or new commercial partnerships could drive sustained re-rating after a 72% drawdown from COVID-era highs.
BUSINESS & POSITION
Maravai is a life sciences tools company specializing in oligonucleotide synthesis and GMP manufacturing-critical inputs for mRNA therapeutics and gene therapy. The company rode the COVID vaccine wave to outsized revenue but has spent 18 months digesting the normalization; RS line at new high suggests the market believes the trough is in.
FACTOR & THEME
Biotech infrastructure and mRNA/gene therapy enabling technology, with Healthcare +6.0% vs SPY sector-leading. The factor is accelerating as capital returns to life sciences tools post-correction. MRVI also benefits from any renewed interest in pandemic preparedness or next-gen vaccine platforms.
BREAKOUT SIGNAL
Close above \$8.29 on vol >487% of 20d avg
INSTITUTIONAL
Volume at 4.87x on a 114M float implies ~\$462M traded today-far exceeding typical retail capacity, this is institutional re-accumulation. RS at +84.2 vs SPY over 12 weeks is top-decile relative strength, a hallmark of smart money positioning ahead of an inflection. No insider buying in last 60 days; institutional ownership data unavailable from yfinance-recommend 13F cross-check.
EARNINGS
EARNINGS IN 77D
EARNINGS CONTEXT
Next print November 5 (77 days). Consensus unavailable, but MRVI has historically been volatile around prints due to lumpy oligo orders. The 264% YTD gain from \$2.28 lows suggests the market is pricing in a return to revenue growth or margin stability. Watch for commentary on CleanCap and mRNA pipeline visibility.
KEY RISK
Thesis invalid on a close back below \$7.50 (prior resistance turned support), or on any Q3 revenue miss or guidance cut at the November 5 print that signals oligo demand remains structurally impaired. Base_tight at 6.67 is wide-this setup is less controlled than ideal, raising the risk of a failed breakout.
ANALYSIS
Strong RS (+84.2 vs SPY) and RS line at new high are institutional-quality signals, and Healthcare sector leadership (+6.0% vs SPY) provides thematic tailwind. Disconfirming evidence: base_tight at 6.67 is far too wide for an A-grade-this breakout lacks the VCP coil discipline that defines durable setups. The 77-day runway to the next catalyst is long, creating room for volatility. In a risk-on regime, the combination of extreme RS and sector momentum warrants a B, but the loose base prevents full conviction. Conviction: Medium.
Signal: Close above \$8.29 on vol >487% of 20d avg
Vol vs Avg: 4.87x

PRLD

Prelude Therapeutics Incorporat

Vol vs Avg	6.05x
RS Line Hi	YES
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
12.5% surge on 6.05x volume as PRLD approaches its \$6.65 52W high, likely on sector rotation into small-cap biotech or anticipation of clinical data readouts. Forward catalyst: November 11 earnings (83 days) where pipeline updates on CDK inhibitor PRT1419 or SMARCA2 programs could drive binary re-rating, plus potential ASH abstract releases in late September.
BUSINESS & POSITION
Prelude is a clinical-stage precision oncology company developing small-molecule therapeutics targeting cancer vulnerabilities. The 563% gain from \$0.98 lows reflects either clinical progress, partnership speculation, or bottom-fishing in bombed-out biotech-RS line at new high suggests the market is pricing in an upcoming inflection.
FACTOR & THEME
Precision oncology within the broader biotech recovery theme. Healthcare sector is +6.0% vs SPY and accelerating. PRLD benefits from any risk-on rotation into high-beta, clinical-stage names with upcoming catalysts, though binary clinical event risk remains elevated.
BREAKOUT SIGNAL
Close above \$6.50 on vol >605% of 20d avg
INSTITUTIONAL
Volume at 6.05x on a 22.1M float implies institutional participation-likely spec biotech funds or crossover accounts building positions ahead of data catalysts. No insider buying in last 60 days. RS at +41.5 vs SPY is strong but not top-decile. Institutional ownership data unavailable-recommend 13F review to assess holder quality.
EARNINGS
EARNINGS IN 83D
EARNINGS CONTEXT
Next print November 11 (83 days). As a pre-revenue clinical-stage biotech, P/E is inapplicable. Watch for cash runway commentary (critical for a \$520M market cap with no product revenue) and any updates on trial enrollment or data timing for PRT1419 or PRT2527.
KEY RISK
Thesis invalid on a close back below \$5.50 (approximate breakout pivot), or on any negative clinical data, trial delay, or cash-raise announcement that signals dilution risk. Base_tight at 4.6 is wide for a clean breakout. Binary event risk is the primary consideration-this is a catalyst-driven spec, not a momentum compounder.
ANALYSIS
RS line at new high + 6.05x volume + prox_52w 97.8 are strong technical signals, and Healthcare sector leadership provides thematic support. Disconfirming evidence: base_tight at 4.6 is far too wide for an A-grade setup, and the 83-day gap to the next known catalyst (earnings) leaves a long window for volatility. As a clinical-stage biotech, the real catalysts are data readouts (ASH abstracts, interim analyses), not quarterly earnings-those dates are unknown, making this a speculative B rather than a high-conviction A. Conviction: Medium.
Signal: Close above \$6.50 on vol >605% of 20d avg
Vol vs Avg: 6.05x

SETUP METRICS	
Price	\$56.39

Vol vs Avg	4.54x
RS Line Hi	no
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER 9.7% spike on 4.54x volume into today's earnings print, reflecting either a preannounced beat or spec positioning ahead of the release. Forward catalyst: guidance on the call today (August 20) is the immediate driver-any raise on improving IT spending or vendor program wins would extend the move. Next quarterly catalyst is ~90 days out (mid-November).
BUSINESS & POSITION ScanSource is a specialty technology distributor serving IT resellers and integrators, exposed to enterprise hardware refresh cycles and communications equipment demand. The 67% gain from \$33.76 lows suggests the market is pricing in a cyclical recovery in IT spending after a prolonged downturn.
FACTOR & THEME IT distribution tied to enterprise capex recovery and hardware refresh cycles. Limited direct exposure to secular themes (AI, cloud) but benefits indirectly from infrastructure spending. Theme momentum is neutral-this is a cyclical recovery play, not a secular growth vector.
BREAKOUT SIGNAL Close above \$56.39 on vol >454% of 20d avg
INSTITUTIONAL Volume at 4.54x on a 19.9M float into an earnings event is characteristic of spec positioning by hedge funds and event-driven accounts. No insider buying in last 60 days. RS at +29.2 vs SPY is solid but not exceptional. Institutional ownership data unavailable-recommend 13F review.
EARNINGS EARNINGS TODAY
EARNINGS CONTEXT Earnings TODAY (August 20). Consensus EPS/revenue data unavailable. Historical beat/miss record unknown-monitor the call for guidance on Q4 and fiscal 2027. Key items: gross margin trends (vendor program changes), inventory normalization, and any commentary on AI-related infrastructure demand.
KEY RISK Thesis invalid on any revenue miss, margin compression, or cautious guidance on today's call that signals IT spending remains weak. Technically, a close back below \$52.00 (approximate base support) would break the setup. Earnings-day setups carry elevated binary risk-this is a trade, not a hold through the print unless results are strong.
ANALYSIS Vol >4.5x, rs_vs_spy +29.2, prox_52w 84.4, base_tight 2.06-four technical criteria are strong, but rs_line_new_high is false, which downgrades from A to B per methodology. Disconfirming evidence: earnings TODAY introduces binary event risk-if results disappoint, the breakout fails immediately. The lack of RS line confirmation suggests institutional conviction is not yet at the level of a true leader. Forward catalyst path depends entirely on today's guidance. Conviction: Medium (contingent on earnings results).
Signal: Close above \$56.39 on vol >454% of 20d avg Vol vs Avg: 4.54x

LB

LandBridge Company LLC

\$87.03

+5.88%

RS vs SPY: +12.1%

B STRONG SETUP

\$6.8B Cap | 28M Float

Oil & Gas Equipment & Services | Theme: Energy Infrastructure | 52W Hi: 96% | Base Tight: 3.05 | Vol: 2.23x | RS/SPY: +12.1% | Above 20MA: YES | REPORTED

SETUP METRICS

Vol vs Avg	2.23x
RS Line Hi	no
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
5.9% move on 2.23x volume following August 5 earnings (reported 15 days ago), suggesting a delayed breakout as the market digests results. Forward catalyst: any announced acquisitions, land-lease expansions, or contract wins in the Permian Basin over the next 60-90 days. Next earnings is ~90 days out (early November).
BUSINESS & POSITION
LandBridge is a Permian Basin surface-acreage owner generating revenue from oil & gas lease royalties, easements, and water services-effectively a toll-road model on Permian production. The 99% gain from \$43.75 lows reflects both the recovery in Permian drilling activity and scarcity value of consolidated surface rights in the core of the play.
FACTOR & THEME
Energy sector leadership (+6.9% vs SPY, the top-performing sector this week) provides strong thematic tailwind. LB benefits from any acceleration in Permian drilling, LNG export capacity additions, or crude production growth. The surface-rights model offers lower commodity sensitivity and higher margin stability than traditional E&P.
BREAKOUT SIGNAL
Close above \$87.03 on vol >223% of 20d avg
INSTITUTIONAL
Volume at 2.23x on a 28.1M float is modest but sufficient for institutional participation. No insider buying in last 60 days. RS at +12.1 vs SPY is positive but not exceptional-this is a sector-driven move more than a company-specific inflection. Institutional ownership data unavailable-recommend 13F review to assess energy fund positioning.
EARNINGS
REPORTED
EARNINGS CONTEXT
Reported August 5 (15 days ago). Results likely beat given the delayed breakout-monitor for any guidance raise on lease revenue or expansion capex. Next print is early November (~77 days out). Key metrics: acreage under lease, average royalty rate, water revenue trends.
KEY RISK
Thesis invalid on a close back below \$82.00 (approximate breakout pivot from post-earnings consolidation), or on any significant pullback in Permian rig counts or crude prices that reduces lease demand. Base_tight at 3.05 is wider than ideal, suggesting less institutional control.
ANALYSIS
Energy sector leadership (+6.9% vs SPY) and prox_52w at 95.9 are strong positives, earning the +0.5 grade boost for sector alignment. Disconfirming evidence: rs_vs_spy at +12.1 is the weakest among the top candidates, rs_line_new_high is false, and base_tight at 3.05 lacks the coil discipline of a true A-grade setup. This is a sector-momentum play riding Energy leadership, not a company-specific inflection with a durable catalyst path. The 15-day lag from earnings to breakout suggests delayed recognition rather than smart-money anticipation. Conviction: Medium.
Signal: Close above \$87.03 on vol >223% of 20d avg
Vol vs Avg: 2.23x

CARL

Carlsmed, Inc.

\$16.50

+6.31%

Vol vs Avg	2.86x
RS Line Hi	no
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
6.3% spike on 2.86x volume as CARL approaches its \$17.19 52W high, likely driven by commercial traction in personalized spine surgery planning or partnership announcements. Forward catalyst: November 5 earnings (77 days) where any acceleration in procedure volumes or expansion of hospital partnerships could drive sustained re-rating in this early-commercial-stage medtech name.
BUSINESS & POSITION
Carlsmed provides AI-driven, patient-specific surgical planning and implant design for complex spine procedures-a personalized-medicine approach to orthopedics. The 94% gain from \$8.50 lows reflects early commercial adoption and the market pricing in a structural shift from generic to custom implants.
FACTOR & THEME
Healthcare innovation (AI-enabled personalized medicine) within the broader medtech digitization theme. Healthcare sector is +6.0% vs SPY and accelerating. CARL also benefits from any tailwinds in elective-procedure volumes post-COVID normalization.
BREAKOUT SIGNAL
Close above \$16.50 on vol >286% of 20d avg
INSTITUTIONAL
Volume at 2.86x on a 15.7M float is moderate-likely a mix of growth-stage healthcare funds and retail momentum. No insider buying in last 60 days. RS at +37.2 vs SPY is strong, suggesting smart money is positioning ahead of the November catalyst. Institutional ownership data unavailable-recommend 13F review.
EARNINGS
EARNINGS IN 77D
EARNINGS CONTEXT
Next print November 5 (77 days). Consensus unavailable for this micro-cap name. As an early-commercial-stage company, watch for metrics on procedure volumes, hospital accounts added, and cash burn rate. P/E is inapplicable-use Price/Sales or EV/Revenue for valuation context.
KEY RISK
Thesis invalid on a close back below \$15.00 (approximate breakout pivot), or on any revenue miss or slowing procedure growth at the November 5 print. Base_tight at 3.57 is wide, raising the risk of a failed breakout. Binary risk: any adverse event in clinical use or hospital-contract losses.
ANALYSIS
RS at +37.2 vs SPY, prox_52w 96.0, and Healthcare sector leadership (+6.0% vs SPY) are strong positives. Disconfirming evidence: rs_line_new_high is false, base_tight at 3.57 is too wide for A-grade discipline, and vol at 2.86x is below the 4x threshold for explosive institutional buying. The 77-day runway to the next catalyst leaves room for volatility in a micro-cap with limited liquidity. This is a solid B-grade follow-through candidate in a risk-on regime, but lacks the technical precision of an A. Conviction: Medium.
Signal: Close above \$16.50 on vol >286% of 20d avg
Vol vs Avg: 2.86x
