Target: \$248 (measured move from ~\$73 low to \$108 prior base + base-on-base projection; ~15% above pivot)
Stop: \$198 (below 50-day MA and base low)

CATALYST INTELLIGENCE
EARNINGS
April 29 - Reported Q1 on April 29; fwd EPS \$7.44 vs TTM \$3.65 implies sharp earnings acceleration. Revenue growth of 30.8% confirms upcycle traction; next catalyst is mid-cycle guidance and conference participation rather than earnings.
BUSINESS & POSITION
Materion produces high-performance specialty alloys, beryllium products, precision optics and advanced chemicals used in semiconductor manufacturing, defense systems, and aerospace applications. It is a near-monopoly supplier of beryllium-based materials to the U.S. defense industrial base and a key feedstock provider to leading-edge semis.
FACTOR & THEME
Dual exposure to AI semiconductor capex (advanced materials for EUV/packaging) and defense reshoring/critical minerals - two of the strongest secular themes in 2026. Tech sector +11.5% leadership and Energy/Defense strength are direct tailwinds.
NEWS FLOW
Post-earnings drift has pushed RS line to a new high with vol drying up cleanly - classic post-earnings accumulation pattern. Beneficiary narrative on critical-minerals/defense executive orders and AI-related advanced packaging demand. Catalyst type: Industry/Macro, Impact: Med.
INSTITUTIONAL
Vol contraction of 8% on a stock already up sharply with RS line at a 52W high signals quiet institutional accumulation into a tight handle. No Form 4 insider buying in last 60d - baseline absence, not a red flag given post-earnings blackout window.
KEY RISK
Thesis invalid on a close below the 50-day near \$198 or any negative pre-announcement on defense/semi end-market orders before Q2 print.

Tight post-earnings VCP with RS line at 52W high and dual AI/defense exposure into a tech-led risk-on tape; base_tight of 4.34 and modest 8% vol contraction keep this short of A-grade. Strongest disconfirming argument: low float (20.5M) and thin liquidity (250K avg vol) make this prone to whipsaws on any defense-budget headline. Conviction: Medium.

Target: \$92 (15% measured move from pivot based on prior base height)
Stop: \$72.50 (below 50-day MA and recent swing low)

CATALYST INTELLIGENCE
EARNINGS
July 29 - Last 4 quarters: 3 beats, 1 inline; rev growth 37.3%, earnings growth 61.3% - classic serial beater with accelerating fundamentals. Forward P/E 38.5 rich but justified by growth and category dominance.
BUSINESS & POSITION
Vita Coco is the dominant pure-play coconut water brand globally, owning ~50% U.S. market share in a category growing double-digits as consumers shift away from sugary sodas and sports drinks. It also distributes private label and adjacent functional hydration products.
FACTOR & THEME
Plays the GLP-1/better-for-you beverage theme (consumers on weight-loss drugs gravitate to low-cal hydration) and Consumer Defensive resilience. Peer read-through: CELH weakness has actually accelerated share gains for COCO as the next-leg better-for-you winner.
NEWS FLOW
Stock pushed to all-time highs as sell-side flipped bullish post last print; ongoing narrative on category expansion into oat-coconut blends and international (UK/Europe) growth. Short interest 12.8% with days-to-cover 3.9 sets up squeeze fuel on breakout. Catalyst type: Corporate/Industry, Impact: Med.
INSTITUTIONAL
Massive vol contraction (48.7%) with price within 1.1% of pivot and RS line at new high is textbook quiet accumulation. No insider Form 4 buys in last 60d - common for consumer staples names. Short interest at 12.8% adds squeeze optionality on a breakout.
KEY RISK
Thesis invalid on close below \$72 (base low / 50-day); secondary risk is a coconut commodity cost spike compressing gross margins at the July 29 print.

Extreme vol dry-up (-48.7%), RS new high, and 12.8% short interest set up an asymmetric breakout with category momentum at the back; loose base_tight of 8.76 and a July earnings date too far out as a catalyst hold this from A-grade. Strongest disconfirming argument: analyst target price (\$73.67) is BELOW current price, suggesting sell-side already views this as fair value. Conviction: Medium.

Target: \$38 (17% measured move from pivot, in line with prior breakout structure)
Stop: \$28.50 (below 50-day MA)

CATALYST INTELLIGENCE
EARNINGS
August 5 - Forward P/E 10.0 vs TTM 18.1 - earnings nearly doubling on Agamree ramp. Last several quarters have been beats with raised guidance; rev growth 5.6% understates underlying franchise expansion.
BUSINESS & POSITION
Catalyst Pharmaceuticals commercializes Firdapse (LEMS), Fycompa (epilepsy), and Agamree (Duchenne muscular dystrophy), generating high-margin revenue from FDA-approved rare-disease assets. It is one of the few profitable small-cap biotechs with 84% gross margins and 37% net margins.
FACTOR & THEME
Healthcare sector leadership (+2.8%) combined with rare-disease pricing power. Defensive growth profile attracts capital rotating out of speculative biotech into profitable specialty pharma names.
NEWS FLOW
Agamree (DMD) launch tracking ahead of expectations and Firdapse remains stable cash cow post-IP litigation overhangs. Recent business development chatter on additional rare-disease tuck-ins. Catalyst type: Corporate, Impact: Med.
INSTITUTIONAL
Vol contraction of 26% with RS line at new 52W high indicates ongoing accumulation; 7.9% short with 4.3 days-to-cover provides moderate squeeze fuel. No 60-day insider buys - baseline for a stable specialty pharma name.
KEY RISK
Thesis invalid on close below \$28.50 (50-day MA / base low); binary risk is a generic Firdapse challenge ruling or Agamree launch disappointment at the August print.

Profitable rare-disease biotech with RS new high, clean 26% vol contraction, and healthcare-sector tailwind; pivot is still 4.1% away and no earnings catalyst until August so trigger could take 2+ weeks. Strongest disconfirming argument: only 5.6% revenue growth caps the multiple-expansion narrative - this is a value-biotech setup, not a growth story. Conviction: Medium.

Target: \$158 (17% move based on prior breakout structure + short-squeeze overshoot potential)
Stop: \$122 (below 50-day MA)

CATALYST INTELLIGENCE
EARNINGS
August 6 - Forward EPS \$5.27 vs TTM -\$1.25 - sharp swing to profitability story. Last 2 quarters were beats with raised IoT guidance; PEG 0.51 implies under-appreciated growth.
BUSINESS & POSITION
Synaptics designs wireless connectivity, touch, and processing chips for IoT, automotive, and consumer edge-AI applications, with Broadcom-licensed Wi-Fi/Bluetooth IP a key franchise. The IoT business is the growth engine as edge-AI inference shifts toward dedicated low-power silicon.
FACTOR & THEME
Pure-play edge-AI/IoT semi exposure into a tech sector leading +11.5%. Peer reads (CRUS, LSCC, SLAB) confirm institutional rotation into smaller-cap semi names benefiting from non-data-center AI buildout.
NEWS FLOW
Recent strategic partnership/IP licensing chatter with major AI silicon players supports edge-AI narrative; 21.1% short interest with 6.2 days-to-cover is significant squeeze fuel on breakout. Catalyst type: Industry, Impact: High.
INSTITUTIONAL
RS vs SPY at +53.4 is best-in-class in this list and RS line at 52W high - institutions clearly accumulating ahead of edge-AI thesis confirmation. Vol contraction softer (5.8%) than ideal but vol_ratio 0.55 is clean dry-up. No 60-day insider buys.
KEY RISK
Thesis invalid on close below \$122 (50-day MA / base structure); fundamental risk is a Chinese consumer-IoT demand miss at August print given still-negative operating margins.

Best-in-class RS (+53.4) and 21% short interest set up explosive breakout potential with edge-AI tailwind, but vol contraction is only soft (5.8%) and base_tight 5.83 keeps it below A-grade. Strongest disconfirming argument: still GAAP-unprofitable with -4.3% op margin - any IoT demand wobble unwinds the entire re-rating thesis. Conviction: Medium.

SYNA — 90D Base Setup | Pivot: \$134.84 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

ENTRY TRIGGER
Close above \$105.94 on volume >150% of 20-day avg
Target: \$125 (18% measured move + potential PDUFA premium)
Stop: \$92 (below base low and 50-day MA)

CATALYST INTELLIGENCE
EARNINGS
May 5 - Reported May 5 with rusfertide BLA progress update; fwd EPS -\$0.68 (improving from -\$1.81 TTM) reflects partnership economics. Q4 earnings call highlighted JNJ partnership milestones and Phase 3 timeline.
BUSINESS & POSITION
Protagonist develops oral and subcutaneous peptide therapeutics, with rusfertide (polycythemia vera) and the JNJ-partnered IL-23 receptor antagonist icotrokinra for psoriasis as lead assets. Icotrokinra is in late-stage development with potential blockbuster (\$5B+) addressable market.
FACTOR & THEME
Late-stage biotech catalyst story tied to icotrokinra Phase 3 readouts and rusfertide BLA acceptance. Healthcare sector tailwind (+2.8%) but RS line still below 52W high signals the move hasn't been confirmed yet.
NEWS FLOW
Awaiting rusfertide PDUFA decision (expected 2H 2026) and additional icotrokinra Phase 3 readouts from JNJ. 13.6% short interest with 10.7 days-to-cover is meaningful squeeze fuel. Catalyst type: Corporate (regulatory), Impact: High.
INSTITUTIONAL
Tightest base in the list (base_tight 1.68) and clean 33% vol contraction signal disciplined accumulation, but RS line NOT at new high is a yellow flag - institutions accumulating but stock hasn't fully reclaimed leadership. No 60-day insider buys.
KEY RISK
Thesis invalid on close below \$92 (base low / 50-day); binary risk is a rusfertide CRL or icotrokinra Phase 3 disappointment - single-event invalidation is severe.

Tightest base in the cohort with cleanest vol dry-up and binary PDUFA/Phase 3 catalysts loaded into 2H - asymmetric setup with JNJ partnership de-risking the story. Strongest disconfirming argument: RS line is NOT at a new high which means the recent advance hasn't earned full leadership status; binary biotech risk also means a single bad readout produces a 30%+ gap down. Conviction: Medium.

CATALYST INTELLIGENCE
EARNINGS
August 4
Within 1% of pivot with tight base but negative RS vs SPY (-2.7) and RS line not at new high - failed leadership signature despite Tech sector strength. SYNA is the stronger pair-trade choice in same theme. Conviction: Low.

ENTRY TRIGGER
Close above \$218.68 on volume >150% of 20-day avg
Target: \$245 (12% measured move from pivot)
Stop: \$200 (below 50-day MA)

CATALYST INTELLIGENCE

EARNINGS

April 22

Right at pivot with tight base and clean vol dry-up but negative RS vs SPY (-3.5) and RS line not at new high - lacks leadership confirmation needed for a higher grade. Conviction: Low.

ENTRY TRIGGER

Close above \$60.90 on volume >140% of 20-day avg

Target: \$68 (12% measured move; aligns with \$65.80 sell-side target)

Stop: \$57 (below 50-day MA)
